

eGreen

Smart Packaging & Tableware.

Since 1947 eGreen have been at the forefront of the disposable catering products industry, we strive to be 'Best in Class' in everything we do.

We aim to lead the innovation of eco-friendly products and solutions to meet customer demands in an ever changing market place.

All of our drinkware products, whether reusable or disposable are manufactured in either the UK or Europe, thereby minimising our transport miles and carbon foot print as much as possible. Our drinkware range is also recyclable at the end of service.

Our wood products – everything from wood cutlery to toothpicks – are FSC® 100% certified birchwood with a full trail of audit.

Our 100% r-PET cold cups are entirely made from high quality, food-grade recycled content.

Local Manufacturing

By manufacturing as many products as possible in the UK we are backing British factories and actively minimising the miles travelled and the associated carbon footprint.

Fully Recyclable

All of our disposable drinkware, whether made with PP or r-PET are fully recyclable after use through standard recycling streams.

Recycled Content

Our range of 100% r-PET tumblers and lids is made entirely from recycled content, utilising high quality food-grade material collected from festivals and events.

The use of recycled plastic is critical for all of us to reach our sustainability targets. Our r-PET products are made entirely from recycled waste it significantly reduces our (and your) usage of virgin oil-based plastics.

Manufacturing from recycled content rather than virgin material also reduces greenhouse gas emissions by up to 79%. The energy saved on producing 1kg of r-PET vs PET would be enough to power a 13w lightbulb continuously for 20 days.

Our Certifications

Look for our FSC® certified C132056 product.
