**DESIGNED TO
SAVE PRINTERS MONEY**

ADDITIVES

**NEW
2022**

GOLD

Make a print shimmer with **FN-INK™ Gold Metallic**. If used on polyester garments, use a low bleed underbase. FN-INK™ Gold Metallic can be printed on its own, or mixed with 20% of an FN-INK color to achieve stand-out effects.

SILVER

Make a print shimmer with **FN-INK™ Silver Metallic**. If used on polyester garments, use a low bleed underbase. FN-INK™ Silver Metallic can be printed on its own, or mixed with 20% of an FN-INK color to achieve stand-out effects.

PUFF

FN-INK™ Puff can be used as a underbase or mixed into colors. The amount of puff is linked to how thick the ink deposit is. For higher loft, print a thicker ink deposit. For lower puff prints, either decrease the amount of puff additive or print a thinner ink deposit.

PEARL

Give your print dynamics with **FN-INK™ Pearl**. It is not recommended to be printed on its own. Rather, apply over set colors or mix 20% by weight into color.

**LOW
CURE**

SPECIALTIES & FX

CURABLE REDUCER

FN-INK™ Curable Reducer is a low cure additive designed to lower an ink's thickness, making the ink easier to print. It's not a low bleed ink.

EXTENDER BASE

FN-INK™ Extender Base is a low cure, fully finished clear ink. It's designed to extend an ink's usage during long print runs. FN-INK™ Extender Base is not a low bleed ink.

STRETCH

FN-INK™ Stretch can be used as an underbase on stretchy garments or as an additive for colors that need more flexibility. When cured properly, the ink will resist cracking or splitting when stretched beyond an ink's normal limits.

BARRIER BLACK

Fight back dye migration with **FN-INK™ Barrier Black**. Formulated as low bleed underbase, it's a specially made ink designed to stop dye migration on polyester garments from the ground up.
