

Acid Bass Lines

39 groovy REX2 patterns
in 3 different keys (117 loops total)

by Craig Anderton

Acid Bass Lines Loop Library

Thank you for purchasing the Acid Bass Lines loop library! You know the sound...it was, and remains, a staple of dance mixes. Although the TB-303 was sometimes reviled when it first appeared, over time it became adopted by more and artists, until it became commonplace in techno, EDM, hip-hop, and other musical genres.

These TB-303 based-sounds are exactly what you'd expect: rhythmic, techno/electro/EDM-friendly, and expertly sliced as REX files that stretch over a wide tempo range.

This package includes 39 loops, in three different keys: C, E, and A. This makes it easy to transpose the loops to specific keys, without significant audio degradation. Eleven "mix and match"-friendly groups of loops, some of which include swing-oriented patterns, work with any DAW that can load REX files. Furthermore, many DAWs can separate out individual REX file slices, which you can re-combine to create even more loops. All loops are 44.1 kHz/16 bits.

Note that with Apple Logic Pro X, REX2 file support requires running a terminal command. Many virtual instruments also support REX2 files.

Now make some great music!

A handwritten signature in black ink, appearing to read "Craig Anders", with a stylized flourish at the end.
