

Strengthen Your Company's Safety Programs & OSHA Compliance with Effective & Budget Friendly YoLink Products!

Explore YoLink Products for Safety & Security Solutions.

YoLink has Solutions for Enhancing Accident & Incident Prevention and OSHA Compliance programs. YoLink has Safety Products for detecting Slips, Trips and Falls Hazards, Walking & Working Surface issues, Blocked Exits & Aisles, Unlocked Exit Doors, & Room occupancy monitoring. Leak Detection monitoring, YoLink Enhances Security Solutions; Security Camera, Motion & Proximity Detection, Smart Locks, and many more Solutions! Enclosed Area Monitoring with Security Cameras, Motion Detectors & Proximity Detectors, Smart Locks, and more. Life Safety – Fire Prevention Enhancements. Enhanced Fire Prevention program for your Lithium-ion Battery charging and storage areas with A Pro Active monitoring program for Effective Early Detection for a Lithium Battery's Thermal Runaway (TR) potential. - Does your company's heat stress prevention program have active 24/7 Ambient Air Temperature & Humidity monitoring? YoLink has a Temperature and Humidity monitoring system Package for this Solution. Explore YoLink Products for Safety & Security Solution today.

Whole Building Device Control! Using YoLink Hub with LoRa* range is ¼ mile (1320 feet), with Smart App active 24/7 monitoring capabilities, email notifications, record retention, easy to use and to install. Hub has a unique Control-D2D device-to-device pairing, you create links between one device and up to 128 other devices. Once a pairing relationship is set, the devices will respond accordingly, even if WiFi, internet, or power is out. Numerous Features included in App Control.

Smart Building - With Raedius, you can monitor, manage, and control your smart systems, including multiple buildings and sites, from a single user interface: your web browser on your

PC – from anywhere at a time. With Raedius Web Console, facility managers can deploy YoLink smart wireless devices on a scale, schedule, and budget of their choice. Unlike traditional building automation and management systems, YoLink devices do not generally require any added wiring, and they avoid steep installation costs, along with the mess, inconvenience, and loss of access to facilities, typical during system retrofits, additions, or upgrades. infrastructure: installation of a YoLink system typically does not require the installation of any special power or communications infrastructure; typically, hubs are connected

to existing WiFi and/or Ethernet sources. This is contrasted against even modern-day wireless competitor systems, which use cellular or older RF technology, which require multiple power supply locations, and boosters or repeaters. While replacing an existing BAS system entirely may not be practical, an added strength of YoLink products is the ability to start small and scale up over time, and add functions in future phases, etc...

Raedius was designed to allow you to realize the full potential of your YoLink system by supporting any number of devices at any number of locations. Monitor device status, historical activity, and health. Configure automated responses to abnormal events and take advantage of advanced options to notify appropriate personnel and staff, as well as Management.
