

MINI ROK

Are you ready to bolt on PURE EXHILARATION for 2015?
Race with the Engine Package that is Sweeping the Nation

Why MINI ROK?

Right out of the box, these motors are Extremely competitive!
Well matched carburetion system ensures predictable performance!
Low Maintenance Required!
Very reasonable entry cost!

What is a Mini Rok?

It is a piston port engine air cooled, where the body and the finning have been dimensioned in order to obtain the greatest thermic and dimensional stability, paying particular attention to the most stressed part near the exhaust.

The constructive architecture of the engine is that of a high performance engine: gravity chill castings, thick cast iron liner, cyl. head with radial fins, crankcase with wide air passages for cooling are only some of the characteristics that have been of focus in this project.

The centrifugal clutch with monolithic rotor and electric starter on board complete the configuration of an engine expressly born for the competitions and, while being reliable and easy to drive.

It's important to stress that due to our manufacturing methods, all engines have the same performances which keeps the qualitative standard high and constant.

What's included in the motor package?

You will receive a complete engine package containing an engine, exhaust, electronic harness, battery support, battery, spark plug and charger.

What's the MINI ROK price?

A Complete engine package costs \$2,050 (+freight).
