ALL NATURAL DOG TREATS COLO. USA

SPLIT ELK ANTLER

Ingredients: 100% naturally shed elk antler.

Description: Antlers are sorted by weight, rather than length.
Small antlers 100g or less
Medium deer antlers 101-200g
Large deer antlers 201-300g
Huge deer antlers 301-425g

Recommended for: Aggressive chewers. Pick the right sized antler depending on the chewing strength of the dog (i.e. a large German shepherd should not be given a small antler, they should be given a large antler).

Chew Time: This antler is likely to withstand weeks to months before it needs to be replaced.

Sales Tips: Good for customers looking for a long lasting chew. These split antlers aren't nearly as durable as a whole elk antler (an extremely determined and powerful dog could crack them in two), but will still stand up to multiple chewing sessions from the average dog. Most dogs will find the exposed marrow attractive - the marrow is full of nutrients such as protein, calcium, and phosphorus. An alternative chew option for dogs with common allergies such as beef or chicken.

Country of Origin: USA

Ways to Purchase: Sold by the piece. Available in small, medium, large, huge sizes either split or whole.
