Buckeye, AZ

Dear Lola,

This is to inform you of the results of the products received for testing June, 2018.

Sample	APC Results	Fungal/Yeast Results
Engelmann Spruce Hydrosol Batch: ES180613	ND	ND

*cpg = colonies per gram
*TNTC = too numerous to count
*nd = none detected

The FDA says that although cosmetics need not be aseptic, the number of microorganisms should be low. Guidelines are that products intended for use in the eye area should not have greater than 500 CFU (colony forming units) per gram. Products intended for non-eye areas should have no more than 1000 colony forming units per gram of product. Thank you for your business.

Sincerely yours,

Cindy Jones, Ph.D.
