

PART# ME-GNNBN3-X

Grove Express NBN Enclosure

Key Features:

- 12 Data Point Capacity ** (Grove 6 Port Modules not included with enclosure)
- Meets and exceeds NBN ventilation requirements
- Powder coated white, re-paintable to suit home decor
- Enclosure can be surface mounted or recessed with no extra kit required

Grove Communication's Express NBN Enclosure is a great entry level & cost effective enclosure, intended for housing and distributing NBN Co. Equipment and services within your premises.

This enclosure is targeted at smaller installs where the premises owner desires the sensitive equipment housed in a protective compliant enclosure, rather than being mounted and exposed within a carport / walk-in robe environment where exposed leads can lead to potential issues in the future.

Having provisions for 2 x Grove 6 Port Cat6 modules and 1 x Power / GPO outlet, the Grove Communications Express NBN Enclosure will serve as an attractive and functional means to house the NBN Co. Equipment

It is certainly ideal for those that don't necessarily need all the features of the Grove Communications Elite NBN Enclosures.
