

Aquarium Co-Op Manifold Block Add-On Instructions

Note:

- This manifold block add-on is intended for use with the Aquarium Co-Op CO₂ regulator.
- Do not attempt to disassemble. Disassembling will void the 1-year warranty.
- Injecting too much carbon dioxide (CO₂) is harmful to fish and other aquatic animals.

Installation Guide for the Manifold Block Add-On

Diagram of Manifold Blocks:

- A. Manifold block endpiece
- B. Manifold block add-on
- C. Block with solenoid valve

1. To install an extra manifold block, make sure the power adapter is unplugged and the CO₂ cylinder valve is closed by turning it clockwise all the way.
2. Use the included Allen wrench to unscrew the manifold block endpiece (i.e., the block with an arrow pointing up).
3. Position the regulator so the dials on the gauges are facing you. Screw in the manifold block add-on (i.e., the block with an arrow pointing sideways) to the left of the block with the solenoid valve. Up to 5 manifold block add-ons can be attached in a row.
4. Screw in the manifold block endpiece so that it is the leftmost block in the row of manifold blocks.
5. Continue installation by following the manual for the Aquarium Co-Op CO₂ regulator, and remember to complete Steps 6–9 and Step 13 for each manifold block. These steps explain how to set up the bubble counter and connect the CO₂ diffuser.
