

TURBOFS

Hybrid Forage Sorghum

TurboFS is a full season combination with maturity sufficiently long to allow the production of very high yields.

- High Tannin Hybrid
- Panicles are very large, semi-compact & very well exerted above the upper leaves of the canopy
- Plant color is purple & tiller capacity is limited
- Height is good and under higher moisture conditions will be 60 inches+

Panicles tend to bend to the center of the row giving the impression of very high plant numbers. Leaves are slightly erect and are also broad & have a juicy midrib. Seed color is bright red translucent & spikelets are awnless. A high level of weathering resistance exists for the hybrid. Excellent resistance to head smut. Yield level for **TurboFS** is very high & should be grown in those environments where sufficient rainfall/irrigation is available to insure a high level of production.

Plant Characteristics

Grain Color	Plant Color	Standability	Plant Height	Panicle Type	Midrib Type	Tillering & Regrowth Capacity	Grain Color Planted
Red	Purple	5	55-65 in.	SC	Brown	3-4	Red

Standard Rating

A standard 5 point rating system is used unless otherwise indicated. Ratings are based on comparison with other MMR products of like maturity.

1.....Poor

5.....Excellent

** Agronomic data are insufficient to make a rating at this time
