

True Performance Support

The CADLearning Enterprise Solution

CADLearning pairs the most comprehensive library of Autodesk learning content in the world with the tools employees need to find answers, and administrators need to manage knowledge, talent, and competencies, all in one easy-to-use interface.

Lessons are atomized to focus on just one concept or feature per video, providing short, digestible microlearning that can be used as building blocks for everything from A-Z training, to flipped classrooms, to in-application performance support.

Because content is deployed incrementally, the library is continuously growing in alignment with Autodesk subscription updates, helping your teams quickly bridge the delta between software releases.

Organizations can easily add their own custom content and combine it with CADLearning content to integrate company standards and best practices with product use.

From pre-hire assessments and onboarding, to upskilling and refresher training, CADLearning makes your employees more productive every step of the way.

The CADLearning Enterprise Solution Includes:

- Access to the full CADLearning library
- The ability to integrate custom content with CADLearning content for hyper-personalized learning
- Targeted assessments that automatically generate individualized learning paths to fill knowledge gaps
- Custom playlists to help employees master your organization's workflows and procedures
- Pre-hire assessments to prove that candidates have the requisite skillset for the job
- Outcome-driven analytics to assess competencies at the individual, project, and organizational levels
- CADLearning Plug-in that provides contextual lesson suggestions as your employees work in a supported Autodesk software program
- Mobile apps for iOS and Android
- Tools to create engagement with both the content and your organization
- Global search and course filters to quickly locate targeted information
