

ASCE+[®] EXOSOMES

by INMODE

IRLV

FEMALE INTIMATE CARE

Vial 1 | Lyophilised Powder

- 5 billion ExoSCRT[®] Exosomes
- Rose Stem Cell Exosome
- 7 Growth Factors
- 6 Peptides
- 4 Coenzymes
- 8 Amino Acids
- Vitamins & Minerals

Vial 2 | Diluent

- HA
- 4 Peptides
- 4 Minerals

Vaginal dryness improvement

Irritation relief

Itching improvement

Intimate Care | IRLV

5 Billion Exosomes
20 mg + 5 ml

ASCEplus IRLV?

For various reasons, such as ageing, menopause, excessive diet, and a decrease in estrogen (the female hormone), the vaginal wall loses its elasticity, making it thin, dry, and easily scarred, resulting in itchy and stinging symptoms.

ASCEplus IRLV normalises the environment in the vagina, rebuilds the thinned skin barrier, increases moisture retention, improves dryness, and helps restore the original health.

Dry vaginal environment

Thinning and lost elasticity

Itching and burning sensation

Desensitisation

Increased water content

Collagen synthesis

Normalisation of the vaginal environment

Skin barrier regeneration

Increase elasticity

Increase collagen synthesis
up to **690%**

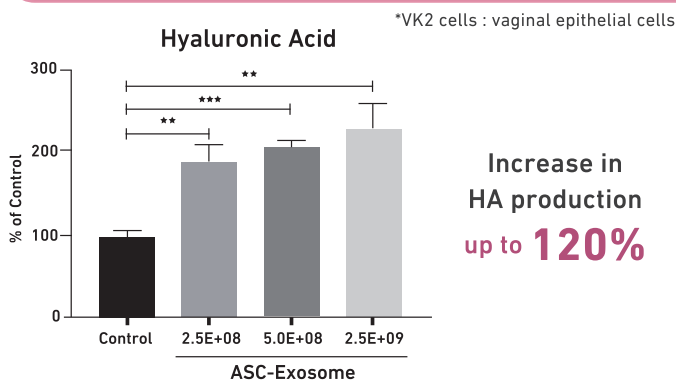

Improvement of itching

Itch-inducing cytokine reduction
(TNF- α , IL-31, TSLP, etc.)

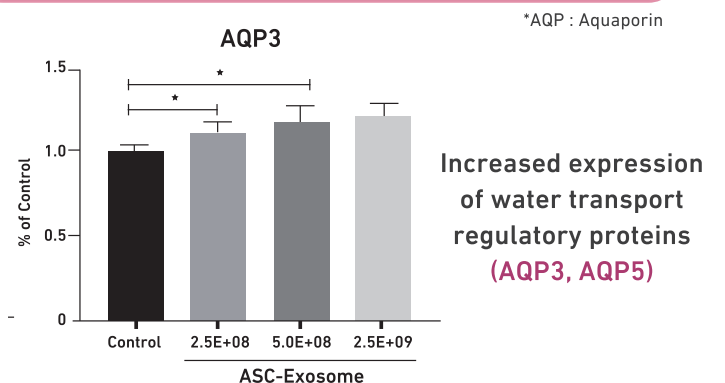

Vaginal dryness improvement

Increases epidermal moisture content by rebuilding the skin barrier

Increased HA production in VK2 cells

Aquaporin expression in VK2 cells

Source : Ha et al. (2020) Cells 9:680, ExoCoBio, unpublished data

How to Use

Vaginal regeneration RF Microneedling/EBD combined use

1

Local anesthesia or sedation anesthesia

2

RF Microneedling/EBD Laser treatment for vaginal regeneration

3

Application of ASCEplus IRLV

Or it can be used as a stand-alone treatment
