

RAISED BED INSTRUCTIONS (6" to 30" DEEP)

First please check that all the components are correct as per the packing list below.

Lay out one section E.G. two of the corner posts, and then lay the raised bed width sized boards flat on top of the corner blocks, squaring the board corners up level with the blocks. Then screw two screws in each end of the boards using the holes drilled 1" from the ends of the boards, so the screws fix the boards to the corner blocks.

Do this to make up both end sections upto the chosen height of your raised bed.

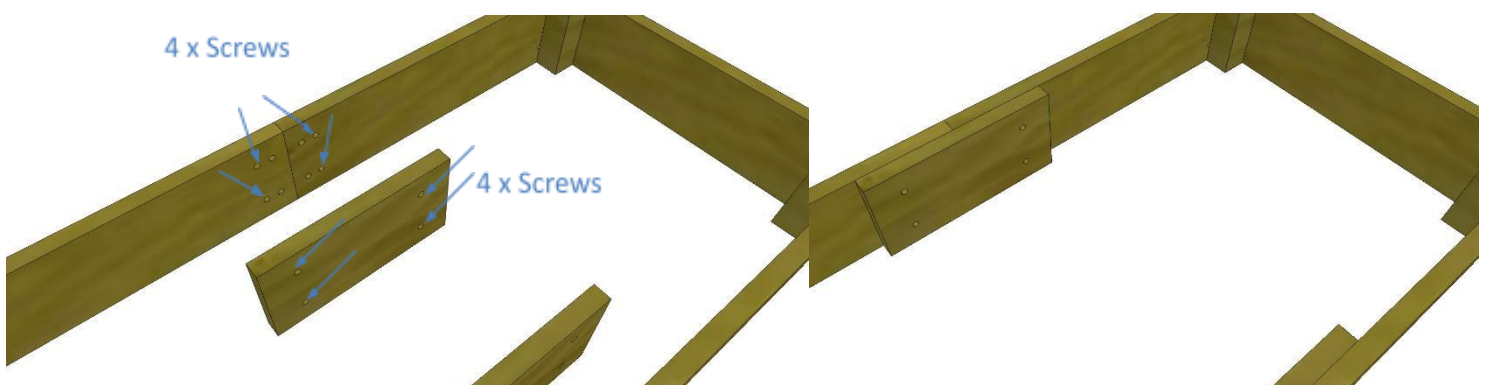

Next stand one of the end sections you created above upright and join together with a side board with two screws, using the holes drilled 2" from the end of the boards. Please see below if you have a 6ft or 8ft raised bed. Starting on the lowest end of your raised bed. Then attach the other end section in the same way as the first, then attach the next side board to create the complete base layer of your raised bed. Continue like this until you have all your side boards attached depending on the height of raised bed you have purchased (6" shown below).

6ft or 8ft Raised Bed

For the 6ft or 8ft raised beds please fix the boards together using the timber joiners in a similar fashion to the corner posts using the pre drilled holes at 2". So you should have screws going in from the boards to the joiners and in from the joiners to the boards. We recommend you join the 2 side boards together before assembling them to the end panels to create one long side board to use as per the instructions above.

The last stage for beds larger than 6" tall then we supply vertical joiners to fix the boards layers together. This is done either in the centre of each board or in the centre of the side joiners on the 6ft or 8ft raised beds. Using screws in the holes provided.
