

## BR24295 Bf 109G-10 and K4 Wheels

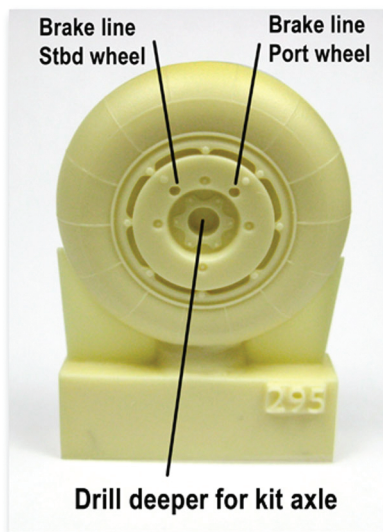

Master patterns  
by Gunnar Jansson

Designed for 1/24 scale Trumpeter Bf 109G-10 & K4 kits.

These wheels replace the inaccurate kit wheels and vinyl tires. The seams on the vinyl tires can be very difficult to remove and they don't take paint well. Installation of our wheels is simple.

- 1) Carefully snap off casting wings. Remove wheels from casting block by carefully sawing at base of tire from front and back sides. Cleanup cut and adjust sit of tire so it angles back a few degrees. See kit instructions and reference photos.

- 2) Select a drill bit to match the diameter of the kit axle. Drill axle hole deeper and test fit.
- 3) Drill a small hole in the recess on the back of the wheel to accept a brake line, if desired. Note hole is towards the front of the wheel hub (port, stbd).
- 4) Tire is scale black & hubs are usually a satin black finish.

Happy modelling!
