

## BR48372 Bf 109G/K Seat with Belts - Eduard

Designed for the 1/48 Eduard  
109G/K kits. May be adapted  
to fit other kits.

This set consists of a simple one-piece casting to replace the kit rear cockpit bulkhead and seat pan, to save you the trouble of fighting with photoetch seatbelts. This seat features a complete detailed harness molded in high-relief for ease of painting for all variants of the 109G & K.

- 1) Begin by removing the casting block by careful sawing. Saw in from all sides. Alternately, you can sand or grind the casting block to a taper so it will fit inside the fuselage.
- 2) Test fit the resin cockpit floor/seat casting into the kit fuselage halves. This casting directly replaces kit part H1. Adjust if necessary. Attach resin parts with Cyanoacrylate.
- 3) Paint cockpit sub assemblies as normal. Cockpit is painted overall RLM 66, a dark grey color. The belts are a light tan color, and the tapered lap pads are sometimes khaki or olive green. Buckles and hardware on the belts are dull silver. A thin black wash applied to the belts will pop out the buckles and other details.
- 4) Assemble rest of model per instructions. Check out our 5 wheel sets for the Bf 109G/K in 1/48th scale, too!

Happy modelling!
