

Tips For Sewing With Cork

Do I need an industrial sewing machine to sew cork fabric?

- No, it sews wonderfully on any standard sewing machine.

What else do I need to know about sewing with cork?

- We suggest using a fresh, sharp needle with each new project, and we personally use an 10/12 or 90/14 Microtex needle.
- Teflon feet are often recommended but you can use a standard or rolling foot. Play around with it and see what suits you and your machine best. If you are sewing through several layers you may need to make adjustments accordingly.
- Wonder Clips. Wonder Clips. Wonder Clips. You will NOT want to pin your gorgeous cork fabric (and it would be difficult trying to)!
- A longer 4-5 stitch length works well for most projects.

Can I embroidery my cork fabric?

- Absolutely, and it's just so beautiful!

How do I clean my cork fabric?

- While cork can be dry cleaned, it is NOT machine washable.
- Cork fabric can be wiped down with a clean gentle cloth, a little liquid soap and water.

Can I iron my cork fabric?

- Cork fabric can crease. Ironing is NOT recommended, and finger pressing will work great for most sewing projects.
- It's best to avoid heat of the iron needed with fusible interfacing, so sew-in stabilizers are great for more structured projects.
