

Rubberific Brickface Landscape Edging

Rubberific Brickface Rubber Landscape Edging is the perfect edging for flower beds, gardens, sidewalks, driveways, and more. The flexible two-sided rubber edging will contour to any landscape and provide any project with a clean and finished look.

Installation Instructions:

PLACE: Place the landscape edging on the ground where it will be installed.

PREPARE GROUND: Remove the edging and make sure the edging installation area is free from grass and debris. Level the dirt where the edging will be anchored to insure a consistent and level look.

CONNECT: Insert the two provided fastening pins into one end of the edging and tap into place. Gently connect two pieces of edging together. The connectors will fit tightly into the edging. For ease of installation, we recommend dipping connectors into dish soap to facilitate insertion into the edging.

ANCHOR: For the best results during this step, we recommend having two people for installation. Starting at one end of the edging, hammer one of the included stakes through the pre-drilled hole using a rubber mallet. The head of the stake should be flush with the top of the edging.

Have the second person bend the edging while the other secures the center of the edging with another stake. Finally, secure the other end with the remaining stake. Repeat the process until all edging is installed.

Note: We do not recommend using a traditional metal hammer as it may damage the stakes.

CUTTING: If necessary to make a cut, use a hacksaw with a miter box for best results. Always wear safety glasses when cutting material.

The Gold Standard of Recycled Rubber

- Easy installation for maintenance-free landscaping
- Made from environmentally-friendly materials approved by the EPA
- The perfect edging for flower beds, gardens, sidewalks, driveways & more
- Mower guide design eliminates the need for trimming
- Made in the USA from 100% recycled rubber
