THE NICKS

PS1

Producer Statement
Commercial and Residential Balustrades

DESIGN COMPLIANCE

The design is in compliance with the New Zealand Building Code (NZBC), NZS 3604:2011 section B1 and F4. Barrier loadings meet AS/NZS 1170.1:2002

WWW.FENCELAB.CO.NZ

THE NICKS BALUSTRADE SYSTEM

A modern architectural styled panel with striking vertical pickets closely spaced to accentuate the vertical lines of the house. Fence panels, balustrade panels and a matching series of gates compliment the range. The design is Pool safety compliant at 1.2m high.

Posted panels for retaining walls, pools & general fencing

Plated panels (post less) for decks & balcony's

1. CLOSELY SPACED PICKETS

The Nicks panel uses a 1:1 gap to depth ratio (40mm gap: 40mm depth) giving it a 45° block-out angle from one side of the fence and a 2:1 gap to depth ratio and 65° block-out angle from the other side. This balances visibility and privacy and makes the balustrade look like a solid smooth surface when viewed from the side.

2. HAND SUPPORT

The top rail of a Finn Balustrade can be capped off with a (optional) capping rail to give a flat surface suitable as a hand support.

3. 3D BALUSTRADE

Equal Angle pickets create a three-dimensional effect that changes depending on the viewing angle. This can be used to dress-up an otherwise plain façade and improve the aesthetic of your home.

APPLICATIONS

The New Zealand Building Code (AS/NZS 1170.1:2002) designates different occupancy types and specifies the load ratings that the system must be capable of withstanding. The system comprises of the panel, posts, fixings and the structure that the balustrade is being attached to. These are summarised in the table below. Refer to the drawings on pages 5-9 for more details.

RESIDENTIAL - Occupancy Type A, B, E, C3

Setting	Application	Type	Design Load	Plate Thickness / Post Centres	Fixing Options	Drawing Number	Pages
Residential	Side Fixed to Masonry Wall	Plated	0.75 kN/m	6mm	Chemset Rod, Screw Bolt	SF1, SF2	Pg. 11
	Side Fixed to Masonry Wall	Posted	0.75 kN/m	1535mm	Chemset Rod	SF9	Pg. 15
	Side Fixed to Timber Deck	Plated	0.75 kN/m	6mm	M12 Coach Screws	SF3	Pg. 12
	Side Fixed to Timber Deck	Posted	0.75 kN/m	1535mm	M12 Bolts	SF11	Pg. 16
	Side Fixed to Steel Boundary Beam	Plated	0.75 kN/m	6mm	M12 Bolts	SF4	Pg. 12
	Side Fixed to Steel Boundary Beam	Posted	0.75 kN/m	1535mm	M12 Bolts	SF12	Pg. 16
	Side Fixed to Concrete Slab	Plated	0.75 kN/m	6mm	Chemset Rod, Screw Bolt	SF5, SF6, SF7, SF8	Pg. 13-15
	Side Fixed to Concrete Slab	Posted	0.75 kN/m	1535mm	Chemset Rod	SF10	Pg. 15
	Side Fixed to Timber Retaining Wall	Posted	0.75 kN/m	1535mm	M12 Coach Screws, M12 Bolts	SF13, SF14	Pg. 17
	Top Fixed to Concrete	Posted	0.75 kN/m	1535mm	Chemset Rod, Screw Bolt	TF1, TF2	Pg. 19
	Top Fixed to Masonry	Posted	0.75 kN/m	1535mm	Chemset Rod	TF3	Pg. 20
	Top Fixed to Timber Deck	Posted	0.75 kN/m	1535mm	M12 Coach Screws	TF4	Pg. 20

COMMERCIAL - Occupancy Type A, B, E, C1/C2, C3, D

Setting	Application	Type	Design Load	Plate Thickness / Post Centres	Fixing Options	Drawing Number	Pages
Commercial	Side Fixed to Masonry Wall	Plated	1.5 kN/m	8mm	Chemset Rod, Screw Bolt	SF1, SF2	Pg. 11
	Side Fixed to Steel Boundary Beam	Plated	1.5 kN/m	8mm	M12 Bolts	SF4	Pg. 12
	Side Fixed to Concrete Slab	Plated	1.5 kN/m	8mm	Chemset Rod, Screw Bolt	SF5, SF6, SF7	Pg. 13-14

FASTENERS AND CORROSION ZONES

New Zealand's coastal climate means that attention must be paid to the proximity to salt water when choosing what fasteners to use. The table below is a guide to where hot dip galvanised fasteners can be used. While it may seem counter intuitive that sheltered installations require stainless steel fittings even within 5km of the sea, it is because regular exposure to rainfall cleans the fasteners and prolongs their life.

Environment	Corrosion Classification	Exposed	Sheltered
Within 500m of breaking surf or 50m of calm salt water	C4	All fixings 304 Stainless Steel	All fixings 304 Stainless Steel
Within 20km of salt water on West or South Coast of South Island or within 5km of salt water elsewhere	C3	All fixings Hot dip Galvanised or 304 Stainless Steel	All fixings 304 Stainless Steel
More than 20km of salt water on West or South Coast of South Island or more than 5km of salt water elsewhere	C2	All fixings Hot dip Galvanised or 304 Stainless Steel	All fixings Hot dip Galvanised or 304 Stainless Steel

Note 1: While hot dip galvanised fixings are acceptable in inland locations it is safer to use 304 grade stainless steel.

Note 2: The table above is only a guide. Please refer to SNZ TS 3404:2018, Figures 1 to 7 for specific corrosivity maps for further guidance.

INSPECTION AND MAINTANENCE SCHEDULE

This schedule of ongoing maintenance of structural elements shall be included with the O&M manuals and provided to the Owner/Body Corporate and building managers.

Timeframe	Inspection / Maintenance
1/2 yearly	Wash down all exposed metalwork including panels, posts and fixings
10 yearly	Check panels, posts and fixings for signs of corrosion. Repair protective coatings or replace as required.
Following seismic shaking > SLS1 event	Inspect and repair as per the 10 yearly requirements.

Full engineers report with design calculations available on request.

Building Code Clause(s)..... B1.....

PRODUCER STATEMENT – PS1 – DESIGN

ISSUED BY:..... OBD Consultants Ltd
(Design Firm)

TO..... Edgesmith Ltd
(Owner/Developer)

TO BE SUPPLIED TO:..... Relevant City Council
(Building Consent Authority)

IN RESPECT OF:..... The Nicks Aluminium Balustrade System Design
(Description of Building Work)

AT:..... Throughout New Zealand
(Address)

Town/City:..... LOT..... DP..... SO.....
(Address)

We have been engaged by the owner/developer referred to above to provide
Structural Engineering Design services of the following SED items: The Nicks Aluminium Balustrade System and its
connections to existing concrete, masonry, steel, and timber structural members.
(Extent of Engagement)

Services in respect of the requirements of Clause(s)..... B1..... of the Building Code for
All or Part only (as specified in the attachment to this statement), of the proposed building work.

The design carried out by us has been prepared in accordance with:

- Compliance Documents issued by the Ministry of Business, Innovation & Employment..... VM1..... or
(Verification method / acceptable solution)
- Alternative solution as per the attached schedule.....

The proposed building work covered by this producer statement is described on the drawings titled:
..... as per attached Schedule..... and numbered..... as per attached Schedule.....;
together with the specification, and other documents set out in the schedule attached to this statement.

On behalf of the Design Firm, and subject to:

- (i) Site verification of the following design assumptions: The balustrade supporting structure/members are to accommodate loads induced by the barrier. Components exposed to environments that do not adversely affect the durability of steel bolts/screws along with washer and nuts....
- (ii) All proprietary products meeting their performance specification requirements; Option added to replace the Epcon C8 fixings with the Fischer Superbond Injection System where bonding anchor in concrete.....

I believe on reasonable grounds that a) the building, if constructed in accordance with the drawings, specifications, and other documents provided or listed in the attached schedule, will comply with the relevant provisions of the Building Code and that b), the persons who have undertaken the design have the necessary competency to do so. I also recommend the following level of construction monitoring/observation:

CM1 CM2 CM3 CM4 CM5 (Engineering Categories) or as per agreement with owner/developer (Architectural)

I,..... Tony O'Brien..... (AC Author NO: 1966) am: CPEng 251875 # Reg Arch..... #
(Name of Design Professional)

I am a Member of: Engineering New Zealand NZIA and hold the following qualifications: BSc Dip Eng CMEngNZ CPEng IntPE(NZ)

The Design Firm issuing this statement holds a current policy of Professional Indemnity Insurance no less than \$200,000*.

The Design Firm is a member of ACENZ:

SIGNED BY..... Tony O'Brien..... (signature)..... p.d. 
(Name of Design Professional)

ON BEHALF OF..... OBD Consultants..... Job Ref:..... 20076..... Date..... 19/01/2023
(Design Firm)

Note: This statement shall only be relied upon by the Building Consent Authority named above. Liability under this statement accrues to the Design Firm only. The total maximum amount of damages payable arising from this statement and all other statements provided to the Building Consent Authority in relation to this building work, whether in contract, tort or otherwise (including negligence), is limited to the sum of \$200,000.*

This form is to accompany **Form 2 of the Building (Forms) Regulations 2004** for the application of a Building Consent.
THIS FORM AND ITS CONDITIONS ARE COPYRIGHT TO ACENZ, ENGINEERING NEW ZEALAND AND NZIA

by Edgesmith

GUIDANCE ON USE OF PRODUCER STATEMENTS

Producer statements were first introduced with the Building Act 1991. The producer statements were developed by a combined task committee consisting of members of the New Zealand Institute of Architects, Institution of Professional engineers New Zealand (now Engineering New Zealand), Association of Consulting Engineers New Zealand in consultation with the Building Officials Institute of New Zealand. The original suit of producer statements has been revised at the date of this form as a result of enactment of the Building Act (2004) by these organisations to ensure standard use within the industry.

The producer statement system is intended to provide Building Consent Authorities (BCAs) with reasonable grounds for the issue of a Building Consent or a Code Compliance Certificate, without having to duplicate design or construction checking undertaken by others.

PS1 Design Intended for use by a suitably qualified independent design professional in circumstances where the BCA accepts a producer statement for establishing reasonable grounds to issue a Building Consent;

PS2 Design Review Intended for use by a suitably qualified independent design professional where the BCA accepts an independent design professional's review as the basis for establishing reasonable grounds to issue a Building Consent;

PS3 Construction Forms commonly used as a certificate of completion of building work are Schedule 6 of NZS 3910:2013 or Schedules E1/E2 of NZIA's SCC 2011²

PS4 Construction Review Intended for use by a suitably qualified independent design professional who undertakes construction monitoring of the building works where the BCA requests a producer statement prior to issuing a Code Compliance Certificate.

This must be accompanied by a statement of completion of building work (Schedule 6).

The following guidelines are provided by ACENZ, Engineering NZ and NZIA to interpret the Producer Statement.

Competence of Design Professional

This statement is made by a Design Firm that has undertaken a contract of services for the services named and is signed by a person authorised by that firm to verify the processes within the firm and competence of its designers.

A competent design professional will have a professional qualification and proven current competence through registration on a national competence based register, either as a Chartered Professional Engineer (CPEng) or a Registered Architect.

Membership of a professional body, such as Engineering New Zealand (formerly IPENZ) or the New Zealand Institute of Architects (NZIA), provides additional assurance of the designer's standing within the profession. If the design firm is a member of the Association of Consulting Engineers New Zealand (ACENZ), this provides additional assurance about the standing of the firm.

Persons or firms meeting these criteria satisfy the term "suitably qualified independent design professional".

*Professional Indemnity Insurance

As part of membership requirements, ACENZ requires all member firms to hold Professional Indemnity Insurance to a minimum level. The PI Insurance minimum stated on the front of this form reflects standard, small projects. If the parties deem this inappropriate for large projects the minimum may be up to \$500,000.

Professional Services during Construction Phase

There are several levels of service which a Design Firm may provide during the construction phase of a project (CM1-CM5 for Engineers³). The Building Consent Authority is encouraged to require that the service to be provided by the Design Firm is appropriate for the project concerned.

Requirement to provide Producer Statement PS4

Building Consent Authorities should ensure that the applicant is aware of any requirement for producer statements for the construction phase of building work at the time the building consent is issued as no design professional should be expected to provide a producer statement unless such a requirement forms part of the Design firm's engagement.

Attached Particulars

Attached particulars referred to in this producer statement refer to supplementary information appended to the producer statement.

Compliance with Building Code Clause B2 – Durability

The purpose of this letter is to demonstrate how compliance with Clause B2 (Durability) of the Building Code for the above project. We can confirm that for specifically designed structural elements that are included within our design documentation:

Material	Means of Compliance	Details
Steel structure & fixing components	Alternative solution	Protection for mild steel has been specified in accordance with SNZ TS 3404- Durability requirements for steel structures and components and AS/NZS 2312 – Guide to the protection of structural steel against atmospheric corrosion by the use of protective coatings. This guide works on a time to first maintenance. Refer to the attached maintenance plan.

Yours sincerely,
