

# STEMTROPIN

**STEMTROPIN**

- 72% Increase in GH<sup>++1</sup>
- 20% Increase in Stem Cells<sup>++2</sup>
- Supports Muscle Building, Strength and Recovery\*

## Natural Stem Cell and GH-Boosting Formula

If there is one thing that 2020 taught bodybuilders, it's that they have to seek out new and innovative methods to support muscle growth. Gyms were closed across the country because of the pandemic, and in many cases traditional bodybuilding food staples were not readily available – but bodybuilders adapted to the situation and reinvented their muscle-building plan. One of the most anabolic hot topics to have emerged is increasing the number of stem cells and growth hormone (GH) in your body naturally, as evidenced by top bodybuilders and other professional athletes who are making stem cell therapy part of their regimen to maximize muscle growth and recovery. Seven-time 212 Mr. Olympia Flex Lewis and eight-time Mr. Olympia Ronnie Coleman have both used stem cell therapy, and the same emerging science to maximize muscle growth and recovery can be part of your regimen with STEMTROPIN – a natural stem cell and GH-boosting formula that is at the forefront of stem cell research and muscle-building and rejuvenation science.

**CLINICALLY DOSED MUSCLE HYPERTROPHY FORMULA**

New stem cell research has uncovered the important role stem cells have on muscle building and regeneration. This new research and the discovery of natural stem cell activators opens the door for athletes to enhance muscle building and performance.

STEMTROPIN's clinically proven ingredients have been shown to boost growth hormone (GH) by 72 percent and stem cells by 20 percent within minutes, with peak levels in as quickly as two hours after supplementation. This breakthrough formula is the first of its kind and will help athletes perform better and enhance the quality of life in elderly populations.

**SUPPORTS MUSCLE BUILDING, STRENGTH AND RECOVERY**

Lying within our muscles are stem cells, invisible engines that drive the tissues growth and repair. Increasing the number of stem cells can have a positive effect on muscle building and recovery, especially when used in combination with resistance weight training. Another well-researched muscle building stimulator

is growth hormone, a major regulator of protein anabolism and tissue growth. Growth hormone is naturally produced by the pituitary and secreted in pulses throughout the day. The largest pulses occur during sleep and exercise. STEMTROPIN contains clinically tested ingredients proven to significantly and rapidly increase the production of stem cells and the release of

growth hormone both during your workouts and while sleeping, for enhanced muscle building and recovery in as quickly as two hours.

**20% INCREASE IN STEM CELLS:**

Contains a full clinical dose of 500 milligrams of sea buckthorn, which has been shown to boost stem cell production 20 percent in just two hours after a single dose. In addition to advancing muscle building, recovery and regeneration, stem cell proliferation may also be helpful in combating age-associated muscle loss.

**72% INCREASE IN GROWTH HORMONE**

**DURING EXERCISE:** Contains a 5-milligram clinical dose of melatonin, plus 500 milligrams of Chlorophytum borivillianum and 375 milligrams of Mucuna pruriens standardized for 15 percent L-Dopa to boost GH levels as much as 72 percent during exercise.

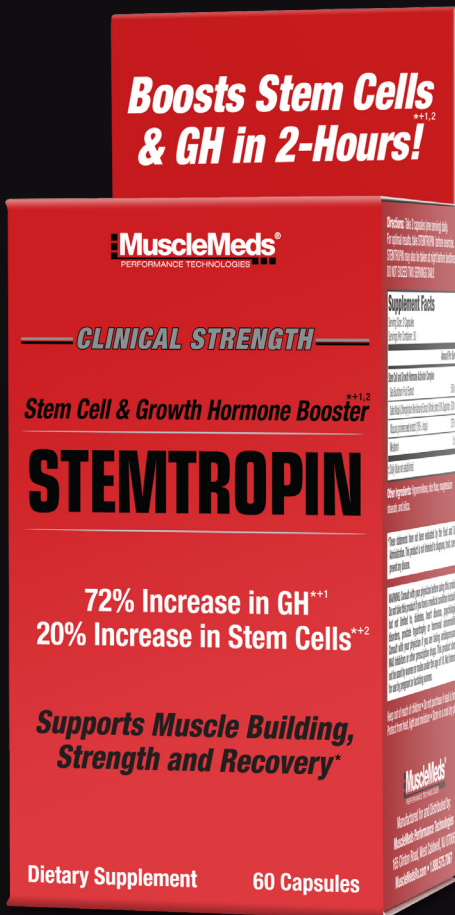

**NIGHTTIME STEM CELL AND GROWTH FACTOR ENHANCEMENT:** STEMTROPIN can also be taken before bedtime to boost stem cell and GH production during sleep to help the body build and regenerate muscle tissue.

**PERFORMANCE ENHANCEMENT:**

Optimizing these two powerful muscle growth regulators – stem cells and growth hormone – STEMTROPIN will enable you to increase muscle size and strength and improve recovery from your workouts.

**COMBAT AGE-ASSOCIATED MUSCLE**

**LOSS:** As we age, the number of stem cells decreases and so does our production of growth factors, which leads to a loss of muscle size and strength. STEMTROPIN's ability to increase both stem cells and growth hormone can help combat muscle loss as we age.

**STEMTROPIN is a natural stem cell and GH-boosting formula that is at the forefront of stem cell research and muscle-building and rejuvenation science.**
