

Cutlass

A green-to-red blocky variety, Cutlass is well adapted for open field production in all growing regions with high humidity and affected by thrips populations. Cutlass produces high marketable yields with less culls even under stressful weather conditions.

FEATURES

- Strong plant structure with excellent leaf coverage prevents yield loss to sunburn
- Continuous fruit setting allows multiple harvests during the production season
- Consistently large percentage of extra-large fruit with attractive dark green color and glossy appearance
- Unique and powerful disease package with resistance to TSWV and Xcv races 1-5, 7-9

BENEFITS

- Desirable plant structure supporting multiple harvests and higher number of packed boxes
- Greater productivity of extra-large, high-quality fruit even in difficult growing conditions such as cold and drought
- Protected by a powerful disease package allowing for more sustainable product practices

TECHNICAL DATA

Approx. maturity	Medium
Plant characteristics	Strong open bush with large leaves
Fruit characteristics	Extra-large, dark green, glossy, blocky and firm
Average fruit size	Extra-large / jumbo
Disease resistance*	HR: TMV / Xcv: 1-5, 7-9 IR: TSWV: 0

DISEASE ABBREVIATION KEY

TSWV	Spotted wilt caused by tomato spotted wilt virus
TMV	Mosaic caused by tobacco mosaic virus
Xcv	Bacterial spot caused by <i>Xanthomonas campestris</i> pv. <i>vesicatoria</i>
HR	High resistance
IR	Intermediate resistance
