

CAMPANIA FOUNTAIN LED LIGHTS

CAMPANIA DUSK 'TIL DAWN LIGHT SENSOR

Campania's new Dusk 'Til Dawn Light Sensor allows you to plug your fountain LED lights in and forget about them.

The sensor will automatically turn your lights on when dusk falls and turn them off when the sun returns. Be sure to place the sensor somewhere near the fountain that will receive direct sunlight during the day as shadows can cause the sensor to activate. **Just connect the male end of the sensor to the transformer and female end of the sensor to the power cord and the sensor will take care of the rest.**

- Cord length from transformer to sensor is 14.75"
- Sensor can be used with up to 5 lights per transformer.
