

Patient Information: PATIENT II, PRETEND

Date of Birth: 11/04/1977	Gender: F	Lab ID: 68220
Date Received: 02/11/2010	Date Collected: 01/01/2010	Date Reported: 06/18/2020
Physician: Sample Physician	Clinic ID: 10804	

CMA (CELLULAR MICRONUTRIENT ASSAY)

Vitamins

Biotin		>140% Insufficient	Vitamin B2		124% Insufficient
Delta tocotrienol		103%	Vitamin B3		104%
MK4		No Proliferation	Vitamin B6		>140% Insufficient
MK7		No Proliferation	Vitamin B9		118% Borderline
Pantothenic acid		No Proliferation	Vitamin C		>140% Insufficient
Vitamin A		105%	Vitamin D		116% Borderline
Vitamin B1		No Proliferation	Vitamin K1		124% Insufficient
Vitamin B12		No Proliferation			

Minerals

Boron		No Proliferation	Manganese		No Proliferation
Calcium		No Proliferation	Molybdenum		101%
Chromium		107%	Potassium		No Proliferation
Copper		104%	Selenium		112% Borderline
Iodine		108%	Strontium		106%
Iron		131% Insufficient	Vanadium		104%
Lithium		No Proliferation	Zinc		No Proliferation
Magnesium		104%			

Amino Acids

Arginine		111% Borderline	L-Tyrosine		>140% Insufficient
Asparagine		101%	Lysine		No Proliferation
Cysteine		132% Insufficient	Methionine		113% Borderline
Glycine		106%	Phenylalanine		No Proliferation
Histidine		No Proliferation	Taurine		No Proliferation
Isoleucine		108%	Threonine		105%
Leucine		No Proliferation	Tryptophan		105%
L-Glutamine		No Proliferation	Valine		101%
L-Serine		104%			

Other Nutrients

Alpha-Ketoglutarate		108%	Glutathione		104%
Carnitine		No Proliferation	Inositol		No Proliferation
Choline		No Proliferation			

These laboratory results are not intended to diagnose a disease state. The performance characteristics of all assays have been verified by Cell Science Systems, Corp. All information provided is only a suggested guideline and should not be substituted for professional medical advice, diagnosis, or treatment.

CMA (CELLULAR MICRONUTRIENT ASSAY)

The descriptions that follow are for educational purposes only. Statements are not to be interpreted as treatment recommendations and do not take the place of advice from a qualified practitioner. Please be aware that botanicals and high doses of certain nutrients may interact with medications, botanicals, and medical diagnoses, and therefore may be contraindicated. The patient is encouraged to seek guidance and an individualized food and supplement plan from a qualified nutrition practitioner.

Significant Micronutrients

- **L-Tyrosine** Tyrosine is a non-essential amino acid that is synthesized in the body from an essential amino acid, phenylalanine. **Important for:** • Building block for protein synthesis • Synthesis of the brain chemicals, dopamine, norepinephrine, and epinephrine • Regulation of mood, appetite, pain sensitivity • Thyroid, adrenal, and pituitary function **May be useful for the prevention/treatment of:** depression, ADHD, cognitive performance and memory, narcolepsy, acute stress, alcohol, heroine, and cocaine withdrawal **Good food sources:** poultry, fish, avocados, almonds, cheese, milk, yogurt, bananas, soybean, legumes, nuts, seeds, and some grains
- **Vitamin B6** Pyridoxine helps convert food into fuel and is a cofactor for more than 50 different enzymes. **Important for:** • Metabolism of fats and proteins • Nerve function • Steroid hormone function • Arterial integrity • Immune function • Synthesis of niacin from tryptophan • Breakdown of homocysteine **May be useful for the prevention/treatment of:** atherosclerosis, hair loss, acne, Meniere's disease, taste disorders, vertigo, neurological conditions, gestational diabetes, premenstrual syndrome, anxiety, ADHD cognitive decline, depression, and possibly some protection from certain toxin induced issues **Good food sources:** Poultry, fish, organ meats, potatoes, banana, seeds, soybeans, spinach, whole grains, legumes.
- **Biotin** Biotin is an essential B vitamin also known as vitamin B7. **Important for:** • The conversion of carbohydrates, proteins and fats into energy. • Health of skin, nails, eyes, liver, and nervous system. **May be useful for the prevention/treatment of:** diabetes, brittle nails, seborrheic dermatitis of infancy, MS, and uremic neuropathy **Good food sources:** meat, fish, egg yolks, liver, poultry, dairy products, seeds, nuts, sweet potatoes, spinach, and broccoli
- **Vitamin C** Vitamin C (ascorbic acid) is a water soluble vitamin that is essential for human survival. **Important for:** • Antioxidation • Anti-inflammation • Immune function • Blood vessel formation • Muscle formation • Collagen production • Brain Health/neurotransmitter production • Absorption of iron • Blood lipid regulation • Detoxification **May be useful for the prevention/treatment of:** allergic rhinitis, asthma, cardiovascular issues, certain types of cancer, cold and flu, GI issues- constipation, gallstones, gastritis, UTIs, muscle cramps, dysfunctional uterine bleeding, glaucoma, depression, diabetes, obesity, post exercise muscle soreness, and sinusitis **Good food sources:** citrus fruits, raspberries, strawberries pineapple, kiwi, cantaloupe, greens, cruciferous vegetables- Brussels sprouts, broccoli, squash, green beans, carrots, potatoes, tomatoes, peppers
- **Cysteine** L-cysteine is classified as a "semi-essential" amino acid manufactured from methionine. It is made in small amounts by the liver, but the availability of methionine is necessary **Important for:** • Protein synthesis • Support of the synthesis of glutathione, the body's "master antioxidant" • Immune support • Lipid metabolism • Digestive support • Vascular support • Antioxidation • Anti-inflammation • Nerve protection • Detoxification **May be useful for the prevention/treatment of:** Alzheimer's disease, Parkinson's disease, arthritis, poor intestinal health, dementia, multiple sclerosis, male infertility, and osteoporosis **Good food sources:** beef, pork, chicken, sunflower seeds, walnuts, and soy
- **Iron** Iron is a mineral found in trace amounts in every cell in the body. Most of the iron in the body is found in the hemoglobin of red blood cells that carries oxygen from the lungs to the tissues of the body and in myoglobin, a protein providing oxygen to muscles. It also functions in several key enzymes in energy production and metabolism, including DNA synthesis. **Important for:** • Oxygen transport • Growth and development • Immune activity • Energy production and metabolism • Hormone, neurotransmitter, and DNA synthesis **May be useful for the prevention/treatment of:** ADHD, cognitive decline/dementia, fatigue, infertility, and restless leg syndrome. **Good food sources:** Iron exists in foods in two forms, heme iron and nonheme iron. The richest sources of heme iron are oysters, liver, lean red beef, poultry, tuna, and salmon. Non-heme iron is harder for the body to absorb. Sources of non-heme iron are legumes, whole grains, nuts, dried fruit, and greens. Consuming these foods with vitamin C rich foods and/or heme sources of iron, enhances the absorption of nonheme iron.
- **Vitamin B2** Vitamin B2, or riboflavin, is an essential vitamin involved in vital metabolic processes. It is a component of two major coenzymes flavin mononucleotide (FMN-aka riboflavin-5-phosphate) and flavin adenine dinucleotide (FAD). **Important for:** • Normal cell function, growth and development • Metabolism of carbohydrate, protein, and fat for energy production. • Cofactor needed to produce glutathione, a very important antioxidant • Homocysteine metabolism • Promotes iron metabolism • Metabolism of steroids and certain drugs **May be useful for the prevention/treatment of:** migraines, Parkinson's disease, hyperhomocysteinemia, and psoriasis **Good food sources:** turkey, sardines, eggs, legumes, soybeans, broccoli, cauliflower, Brussels sprouts, peppers, root vegetables, and squash
- **Vitamin K1** Vitamin K is a general name of a family of compounds with a common chemical structure-Vitamin K1 (phylloquinone or phytonadione), vitamin K2 (menaquinone), and vitamin K3 (menadione- no longer used in fortified foods/supplements). Vitamin K1 is the primary source of vitamin K that humans obtain through foods. **Important for:** • Regulation of blood clotting • Transport of calcium and bone metabolism • Potential antioxidant protection, and insulin sensitivity support, protection of cells lining blood vessels **May be useful for the prevention/treatment of:** atherosclerosis/ischemic heart disease, nausea hemorrhagic disease of newborns, vomiting of pregnancy, and osteoporosis **Good food sources:** green tea, leafy greens such as kale, turnip greens, and spinach, broccoli, Brussels sprouts, asparagus, cabbage, other vegetables.

These laboratory results are not intended to diagnose a disease state. The performance characteristics of all assays have been verified by Cell Science Systems, Corp. All information provided is only a suggested guideline and should not be substituted for professional medical advice, diagnosis, or treatment.

CMA (CELLULAR MICRONUTRIENT ASSAY)

The descriptions that follow are for educational purposes only. Statements are not to be interpreted as treatment recommendations and do not take the place of advice from a qualified practitioner. Please be aware that botanicals and high doses of certain nutrients may interact with medications, botanicals, and medical diagnoses, and therefore may be contraindicated. The patient is encouraged to seek guidance and an individualized food and supplement plan from a qualified nutrition practitioner.

Significant Micronutrients

- **Vitamin B9** Vitamin B9, more commonly known as folate (naturally-occurring form of B9) or folic acid (a synthetic form), is a water-soluble vitamin that is part of the B vitamin family. **Important for:** • Growth and development • Homocysteine and vitamin B12 metabolism • Brain and CNS function • Immune system function • Cardiovascular support • Red blood cell production • Reproductive health **May be useful for the prevention/treatment of:** Alzheimer's disease, cardiovascular disease, homocysteine lowering, anemia, migraines, restless legs, dermatitis, autism, depression, cognitive decline/dementia, age-related macular degeneration, birth defects, diarrhea, hearing loss, osteoporosis, cervical dysplasia, ulcerative colitis, and recurrent miscarriages **Good food sources:** Spinach and other leafy greens, green vegetables, beets, banana, melon, legumes, yeast, mushrooms, oranges and tomato juice.
- **Vitamin D** Vitamin D, known as the "sunshine" vitamin, is a fat soluble vitamin produced by the body in response to sun exposure; it is naturally present in few foods. It functions as a prohormone. **Important for:** • Calcium absorption in the gut • Bone development, bone mineralization, bone health • Regulation of serum calcium and phosphorus levels • Neuromuscular and immune function and maturation of white blood cells • Cell growth • Enhancement of insulin secretion/action • Reduction of inflammation **May be useful for the prevention/treatment of:** eczema, colds, hepatitis C, osteomalacia/osteoporosis, asthma, burns, cancer, CHF, Crohn's disease, depression, diabetes, fatigue, Parkinson's disease, PCOS, lupus, and more **Good food sources:** oily fish -salmon, sardines, herring, mackerel, and tuna, cod liver oil, fortified milk, eggs, liver
- **Methionine** Methionine is an essential amino acid that is involved in the synthesis of important protein molecules and other amino acids. **Important for:** • The support of detoxification of toxins and heavy metals • Antioxidant function • Digestive support • The availability of folate • The support of healthy liver function • Reduction of histamine in blood • Exercise recovery, connective tissue production, and cardiovascular health • Hair and nail strength **May be useful for the prevention/treatment of:** pancreatitis, Parkinson's disease, urinary tract infections, and diaper rash **Good food sources:** Brazil nuts, meat, poultry, fish, yogurt, cheese, eggs, legumes, soybeans, sesame seeds, and grains
- **Selenium** Selenium is an essential trace mineral found in soil, water, and some foods. **Important for:** • Antioxidation • Anti-inflammatory • Immune function enhancement • Antiviral • Reproductive support • Thyroid hormone metabolism • DNA synthesis **May be useful for the prevention/treatment of:** burns, depression, certain types of cancer, cardiovascular disease, CHF, dementia/cognitive decline, Down syndrome, hepatitis, male infertility, lymphedema, myotonic dystrophy, oral leukoplakia, Osgood-Schlatter, and thyroiditis **Good food sources:** seafood and organ meats. Brazil nuts, sunflower seeds, brown rice, shiitake mushrooms, chia seeds, lima beans, cabbage, spinach
- **Arginine** L-arginine is an amino acid, a building block for protein synthesis, and is best known for its effects on the vascular system. **Important for:** • Vasodilation – dilatation and relaxation of blood vessels • Wound healing and enhancement of the immune system • Ammonia detoxification **May be useful for the prevention/treatment of:** anal fissure, congestive heart failure, erectile dysfunction, pre-eclampsia, sickle cell disease, esophageal spasm, infertility, interstitial cystitis, and Raynaud's disease **Good food sources:** meat, poultry, fish, dairy products, peanuts, nuts, seeds, whole grains, legumes, and chocolate.

IMPORTANT! Identified adverse food reactions- allergies, sensitivities, and intolerances- should be avoided even if these cellular tests have shown those food sources of micronutrients/botanicals to be "beneficial". The CMA and APA test the responses of B and T lymphocytes, not antibodies (IgE-mediated allergies) or cells of the innate immune system (Alcat Test). Patients and practitioners are encouraged to carefully read all product/supplement labels and avoid all ingredients that are contraindicated for any reason.
