

IMPORTANT:

To Synchronize the DryBuddyFLEX 3 NR (with no Remote)
please follow these instructions:

Trigger the Transceiver by pressing the Sync button on its side. The light on the Transceiver will flash Blue. While this blue light is flashing, trigger the Sensor by dipping both of its magnet pads in salt water. A “beep” will be heard. The sensor should be removed from the salt water.

Wait for 2 to 3 minutes for the system to default. At this point the light on the Transceiver will change to Yellow. The system is now synchronized and can be activated by pressing the button on the Transceiver.

Green light is ready (active).

Yellow light is stand-by/off (inactive).
