

Maintenance Information for Stainless Steel Hood

The stainless steel range hood you've purchased is constructed using 16 gauge solid stainless steel and has been treated with a clear lacquer, which helps to prevent tarnish. Yet it is important to remember that even the strongest lacquer cannot take the place of responsible care and maintenance. Kindly note the maintenance information below to properly care for your stainless steel sink.

DO

Hood Surface

Clean the exterior surfaces of the metal range hood cover periodically with hot soapy water and a clean cotton cloth. Then dry it thoroughly.

Hood Insert

If the range hood liner (stainless steel) looks splotchy, use a stainless steel cleaner to clean the surface of the hood insert. Avoid getting cleaning solution onto or into the control panel, Follow directions of the stainless steel cleaner, CAUTION: Do not leave on too long as this may cause damage to the hood finish.

Use a soft towel to wipe off the cleaning solution, gently tub off any stubborn spots. Use a dry soft towel to dry the range hood insert.

After cleaning, you may use non-abrasive stainless steel polish such as 3M® or ZEP™ , to polish and buff out the stainless luster and grain. Always scrub lightly, with a clean cotton cloth, and with the grain.

DO NOT

Do not use corrosive or abrasive detergent, or steel wool/scoring pads, which will scratch and damage the hood surface.

Never put your hand into the area housing the fan while the fan is operating!
