Jewelry Cleaner and Sanitizer

As a Gemologist, jewelry manufacturer and retail jeweler, I recognized the need for a quality home cleaning system for fine jewelry. Over the last 65 years, options for cleaning fine jewelry, at home, have been limited to liquid in a jar, a spray on foam, or devices that shake your jewelry. Sadly, many have resorted to cleaning their precious jewelry with a toothbrush and toothpaste and yet the one thing all these cleaners have in common is that they all deliver poor results.

When I discovered Jewelry Hygiene® over five years ago, the idea of cleaning jewelry took on a whole new meaning. Not only did our jewelry need to look its best but our health and our family's health was now a major concern. ***Where there is dirt there is bacteria!*** When you wear your jewelry day after day, month after month without properly cleaning it, viruses and bacteria will grow into a bio-film that builds up inside your rings, bracelets and chains.

When it came time to develop the GemSpa®, I enlisted Dean Kamen, one of the world's most prolific inventors! Together, we created a home jewelry cleaning system that utilizes the cleaning elements of the dishwasher to clean your fine jewelry, increasing its aesthetic beauty, and eliminating bacteria.

One of the GemSpa's patented components are the surgical-

IMPORTANT FACT: If your jewelry has not been professionally cleaned in several months, it may be necessary to run your jewelry through the dishwasher two or three times in a row to remove all the months of built-up dirt and bacteria.

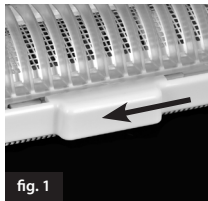

grade stainless steel diffuser plates that were designed to convert streams of water from the dishwasher into a soft spray we call the "Spa Effect." This soft spray of water gently and effectively washes your jewelry with professional results. With the addition of the Anti-Bacterial Hydro-Gel, your jewelry is not only cleaned, but sanitized!

Two and a half years of research and development went into designing the GemSpa® and I am proud that you have selected the GemSpa as your new home jewelry cleaner. This manual will provide you with instructions on how to properly use the GemSpa, and also answer the most commonly asked questions.

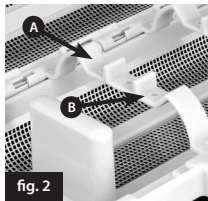

In addition, I have included a toll free number (800) 321-4447 which you can call Monday—Saturday 10:00 am to 5:00 pm EST to ask any questions not addressed in this manual. The GemSpa® is warranted for 5 years, so please go online and register your GemSpa® today. In addition to activating your warranty you will receive a **FREE 1 Month Supply** of Anti-Bacterial Hydro-Gel when you sign up for our Automatic Hydro-Gel Refill Program.

How to Use Your GemSpa®

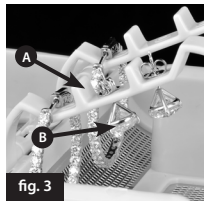

Secure your jewelry safely by placing each item in its designated area.

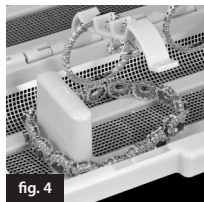

First, slide the locking mechanism to the left to unlock the cover and open it completely so that the top lies flat. (See fig. 1) As the cover opens fully you will notice that the two center arms lift slightly to allow you to place rings and earrings.

Each arm has the capacity to hold three rings separated by the dividers located on top of the arm. (See fig. 2A) This allows room to hold up to 6 rings at the same time. Hoop earrings may also be placed in the dividers; you will also see 6 holes designated for stud earrings. (See fig. 2B)

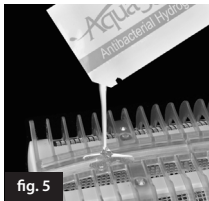

For rings just place each ring between the dividers, for hoop earrings simply lock the clasp on the hoop and place one earring in between each divider. (See fig. 3A) For studs, remove the earring back, place it through the hole and secure the earring from behind. For best cleaning results, attach the stud facing down. (See fig. 3B).

The bottom area is open to hold bracelets, chains or any items too large to fit on the arms. Use the two wide posts as anchors to help keep items separated. You can stack 3 or 4 items in this area as shown. (See fig. 4) Once loaded, rotate the cover back over the base and slide the lock to the right until you hear an audible click sound. This will indicate the lock is secure.

Adding the Anti-Bacterial Hydro-Gel

Take one of the single use packets provided with your GemSpa®, tear open along the top of the packet exposing the funnel

shape imprinted in the foil. Next, gently squeeze out a stream of Hydro-Gel into and along the curved channel located on the top of the GemSpa, (See fig. 5) As the dishwasher runs, hydro-gel mixes with the water to remove bacteria and viruses from your jewelry.

Our research has shown that bacteria loads reach a dangerous level within as little as one week of daily wear. Therefore, we recommend that you clean your jewelry in your GemSpa® once a week.

Now place the GemSpa® in the top rack of your dishwasher, with your dishes and set your dishwasher to the same setting you use when you normally clean your dishes. Please Do Not select a lower wash cycle this will only reduce the cleaning effect. Use the normal wash cycle or higher for best results. The GemSpa works extremely well with all dishwasher soaps. After the wash cycle is done and your machine is completely finished, take out your GemSpa®, open it by using the same procedure when inserting your jewelry, and remove your sparkling clean and sanitize jewelry.

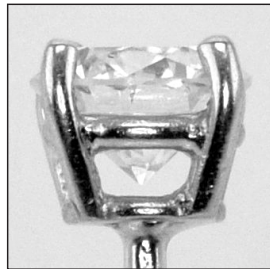

What Contaminates our Jewelry?

In order to understand the cleaning process of the GemSpa® it is important to know what elements contribute to the contamination of your jewelry. Most of us are aware that fine jewelry is constructed to withstand the rigors of daily wear and tear. However, the brilliance of diamonds and the color of gemstones is diminished quickly by the hand creams, dried on soap residue, dead skin cells and everything else we touch daily. Like a magnet, contaminants attach themselves to your fine jewelry.

Before

After

In just a few days, the brilliance and beauty of your jewelry can be reduced by 75% and the bacteria levels can increase to limits far beyond a sanitary level.

Before

After

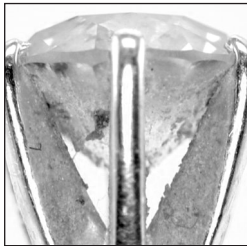

Before

After

Before

After

Over longer periods of time, these substances form a bio-film with deposits of dirt that are virtually impossible to remove with standard home jewelry cleaners.

The jeweler, who utilizes an expensive professional jewelry cleaning system, uses a combination of hot water (under pressure), steam and a detergent to dissolve the oil, dirt and germs that are trapped in your jewelry. The GemSpa® was invented to harness these same elements in the dishwasher and with the bonus of our Anti- Bacterial Hydro-Gel, to clean and sanitize your jewelry in your home.

Commonly Asked Questions

1. Will the pressure, heat and dishwasher soap harm my jewelry or loosen the gemstones?

No, fine jewelry is designed to withstand the abuse of everyday wear. When the dishwasher water passes through our stainless steel diffusers, the effect is similar to that of a shower.

2. Should I examine my jewelry closely before placing it in the GemSpa®?

Yes! Look for broken prongs or loose stones that might need the attention of your jeweler. In the unlikely event that a gemstone does fall out of your jewelry, it will be kept secure within the GemSpa.

3. Can I clean my dishes and use my regular dishwasher soap when using the GemSpa®?

Absolutely Yes! Use any brand of dishwasher soap with the GemSpa®; the soap will enhance the cleaning process in the same way it does for your dishes. This also holds true for the use of rinse aids as well.

4. Why use the Anti-Bacterial Hydro-Gel?

When I discovered Jewelry Hygiene® I was amazed at the heavy bacteria loads found on nearly every item of jewelry, cleaning jewelry requires more than just removing the dirt. Jewelry needs to be sanitized to remove the bacteria and viruses lurking on it. **Using the Hydro-Gel eliminates germs and bacteria.**

Our Anti-Bacterial Hydro-Gel is completely safe and has been in use for over 40 years in the cosmetic products industry and has been used safely on the face and around the eyes.

5. Can I clean all jewelry in the GemSpa®?

No. However, 90% of your fine jewelry can be used in the GemSpa®, there are a few items that are sensitive to the heat and hot water. Please consult the list located at the end of this manual. It will list jewelry that can be cleaned in the GemSpa as well as those that cannot. If you do not find your item on the recommended list, please call the toll free number (800) 321-4447 or visit our website for the latest updated list.

6. Will the cover open and my jewelry go down the drain?

No! The **SecureSure** locking bar mechanism covers the entire front of the GemSpa®. In addition, there is a snap lock located in the middle of the bar, which snaps in place when the lock is fully engaged.

7. Does washing your hands clean your jewelry?

Not Even Close. Medical studies and our own hospital research show that washing your hands has little effect on bacteria levels on your jewelry. The dirt and grime that builds up on jewelry cannot be removed by either soap and water or hand sanitizing gels, which is why Jewelry Hygiene® is such a concern. In fact, soaps and creams that we use on our hands just build up over time, making matters worse. It has been suggested that getting your dirty jewelry wet simply creates a moist environment that actually accelerates bacterial growth.

8. Does the dirt and germs from my jewelry end up on my dishes?

No. Dishwashers do an excellent job of washing and rinsing your dishes and glasses thoroughly and the same holds true for your jewelry. In fact, when the GemSpa® Anti-Bacterial Hydro-Gel mixes with the cleaning soap in your dishwasher, all of the dirt and germs are removed completely. We have tested the bacteria loads on jewelry and dishes after washing and the results always show that all items are sanitized.

Five Year Limited Warranty

The GemSpa® is under warranty for a full five years from date of purchase with registration within 60 days of purchase, guaranteeing quality craftsmanship and operation.

To register, visit our website www.MyGemSpa.com.

Once at the website, click the Registration/Hydro-gel Refill Program link. You will be required to provide your contact info in the fields provided. If the product becomes defective within the warranty period, the company will gladly repair or replace it within two weeks of the determination of the defect by the manufacturer.

This warranty does not cover damage to the product resulting from misuse, accidents or alterations to the product, nor does the

warranty cover the loss or misplacement of the individual components of the product.

The remedies available under this warranty are specifically limited to the repair or replacement of the product. Should services become necessary, return the product postage paid, along with proof of purchase and description of the claimed defect to:
