Feather Friendly Technologies Inc.

Feather Friendly® Bird Deterrent Technology is a simple solution that positively impacts bird conservation, with a durability and longevity of 15+ years. Tested and approved by American Bird Conservancy, Dr. Daniel Klem Jr., and supported by countless other organizations. Independent studies have shown a successful reduction in strikes of over 95%.

Our markers make the glass visible to birds, preventing deadly collisions without compromising a building's aesthetics or views. Since 2006 Feather Friendly has installed over 6 million sq. ft. of product worldwide!

Bird Conservation At Teton Raptor Center

Teton Raptor Center | Wilson, Wyoming

The Solution

Installing Feather Friendly® Bird Deterrent Markers on the windows aligned with TRC's core values of education, evidence-based decision-making, and the well-being of birds. TRC remains committed to closely monitoring the installation's impact and outcome. Over time, they will gather comprehensive information to assess the long-term benefits of this prevention treatment.

TRC is pleased to report that the broader community has shown tremendous support and appreciation for their efforts. They are eager to introduce program participants to the prevention technology as a potential solution for residential homes in the area. The community's enthusiastic response has further fueled TRC's determination to continue implementing impactful measures that prioritize the welfare of our feathered companions.

“
The broader community has shown tremendous support and appreciation for Teton Raptor Center's efforts.”

Teton Raptor Center

What began as the personal passion of two caring field biologists in 1991 has since grown into Teton Raptor Center (TRC), a nonprofit organization advancing raptor conservation through education, research, and rehabilitation in Wilson, Wyoming. TRC's mission compels them to proactively protect all avian friends in need.

The Issue

Nearly 1 billion birds die yearly in North America from collisions with glass. Despite being preventable, it is among the leading human-related causes of avian species loss.

TRC's newly renovated barn, which features beautiful large picture windows, quickly became a priority for preventing a strike risk to nearby species. TRC embarked on a collaborative effort involving multiple stakeholders, including engaged board members, passionate volunteers, and dedicated staff, to deter birds from colliding at the barn.

“
Installing deterrent markers on the glass aligned with Teton Raptor Center's core values.”
