Virtual Site Technologies

Advanced Remote Site Monitoring and Control Systems

Improve network reliability and reduce OPEX with the most advanced remote location monitoring and intervention system on the market

Access Real-Time - Interact and remedy with current location information from any computer. Resolve alerts remotely without requiring a human technician.

Reliabilty - Location reliability is directly affected by how quickly location issues are detected and rectified.

OPEX Reduction - Location visits by specialized maintenance technicians or contractors are a large component of OPEX. Track location statistical history to see trends and identify problems before they occur. Reduce and eliminate EMERGENCY technician or contractor dispatches.

Key Performance Indicators:
- Amperage Draw
- Temperature and Humidity
- Back-Up Battery Voltage
- Input Voltage
- Email Based Alerts
- Statistical Location Reporting and Trend Analysis

Monitor and Control:
- Environmental Systems
- Location Security
- Anchor Integrity
- Fiber Connection
- Communication Status
- Location Power
- Lights
- Radios
- Generators
- Cameras
- Custom Accessories
