### LED Inspection Light

The warm 5,500 to 6,000K light temperature is closer to daylight, which is better for color rendition. The perfectly smooth beam quality and low level illumination make defects 10X more visible. The lenses keep the light on the table and not in the eyes of the operator.

Foam Abrasives, Screen Abrasives, Paper Discs, Film Discs, Cut Sheets, Non-Woven

**Tech Tip:** Foam Abrasives are best used for sealer sanding or for very profiled contoured work pieces. Use 5mm for less contoured pieces, 10mm for medium contoured pieces, 1/2" for very contoured pieces.

## Foam Abrasives

Red Aluminum Oxide Foam Hook & Loop Pads are an excellent choice for preparing any surface that requires soft flexibility in order to ride over profiles so as not to cut or burn through lines or finishes. A great choice by cabinet makers who have challenges sanding or polishing the joint location of molding on a miter door. This pad will not load or pill.

## Non-Woven Abrasives

**Tech Tip:** Non-Woven Abrasives are very similar to "Scotch-Brite".

Non-woven discs & pads are 3-dimensional and highly flexible. The flocked backing is to be used on SurfPrep Sanders with Hook & Loop backup pads (H&L). No vacuum holes are needed for vacuum sanding, the substrate will suck through abrasive and flocking.

SurfPrep's focus is to learn every single day. This means we are out in the field with professionals who focus on sanding all year long. We learn what woodworkers need and we invent new products that bring value to a company. We have innovated a new hand sanding abrasive that is made in the U.S.A. that will outperform and outlast anything else on the market. With this, we created the R.A.D. Pad (Revolutionary Abrasive Design). The R.A.D. Pad is unlike the industry standard 9"X11" abrasive sheets. The foam backing uses the same technology as our Visionary Award-Winning Foam Backed Abrasives but gives the user an option for hard to reach areas where a tool is not always the best option. Revolutionary Abrasive Design Size: 5.5" x 4.5" x 3/16" Thick Made in the U.

## SOLID SURFACE SANDING STEPS

- Choose either an Electric or Air SurfPrep Vacuum Sanding System in a 3/32" or 3/16" random orbital pattern.
- Begin sanding with the sander flat against the surface, then release the throttle lever once removed from the surface to prevent swirl marks.
- Sand in an East to West, North to South pattern, overlapping the previous stroke followed by clockwise rotational circles to ensure uniform finish.
- To ensure an optimal finish and a dust free environment, it is highly suggested a complete vacuum system is used. Uncollected dust creates an abrasive effect and will leave scratches, especially on darker surfaces.
- If necessary, clean between sanding steps with a microfiber towel.
- Install a SurfPrep LED Inspection Light (SPIL-24 or SPIL-40) to ensure uniform sanding across the surface.
