How to grow an avocado plant at home

What you will need:
- Avocado pit, rinsed with water and dried
- 3 – 4 toothpicks
- A clear container

What your plant will need:
- Sunlight
- Water

Instructions:
1.) Gather your materials
2.) Fill your container with water
3.) Find the top and bottom of the pit. (The bigger side of the pit is the bottom.)
4.) Place three toothpicks in the avocado pit at a downward angle, about one inch from the bottom of the pit. Set the pit on top of the container, making sure that the bottom is submerged in water.
5.) Place container in a sunny spot - but not in direct sunlight!
6.) Add water every few days, as you begin to see it evaporating.
7.) It will take several years for the pit to become a tree – but you will start to see it sprout from the top and begin to grow roots in 2 – 6 weeks!
