

NOTICE!

These Fire Protection Systems (FPS) are treated with MICtreat® FPS Chemical to prevent microbiologically influenced corrosion (MIC).

To ensure that all water flowing into the FPS is properly treated, water flows—except in case of fire—must be governed to **12–75 gallons per minute** (gpm), and MICtreat® FPS System pump must be set accordingly.

MICtreat® FPS Chemical is classified as a toxic material. Avoid contact with MICtreat® FPS Chemical and waters treated with MICtreat® FPS Chemical. See MICtreat® FPS Chemical container label and MSafety Data Sheets (SDS) for proper procedures and cautions regarding MICtreat® FPS Chemical.

Should you have any questions, please contact BTI Products, LLC at (970) 884-4629.
