

Before using your camera quick release:

Punch out the necessary hole in the supplied cork mounting cushion for the camera mounting screw to penetrate.

Mounting your Goldmember:

Attach the plate with the cork side to the bottom of the camera with the enclosed screw, making sure it is tightened down securely. Use the remaining enclosed screws, washers and locking nuts to mount the base/receiver onto the “L” bracket, helmet, tripod, etc.; drilling as necessary.

Make sure all screws are securely tightened, but not so tight that they break.

Lock-tite has been applied to the pull pin screw, there is no need to take this out. Removing this screw will strip the threads.

Mating and releasing the camera to the base:

Once you have installed the base to the “L” bracket or helmet, slide the portion mounted to the camera onto the base, **making sure you jiggle it back and forth to ensure the pin is seated properly.**

To release and remount your camera, pull the spring loaded pull-pin straight out until the camera slides easily on and off.
