

Hunnyboots V3

Insole Template Guide

V3 Hunnyboots have sufficient padding for normal circumstances, but if your hound has particularly sensitive feet or you are managing corns or other injuries, you may need to add extra padding.

We recommend using mid-density fabric-backed EVA Foam. Don't use low-density as the foam will permanently dent and make for an uncomfortable fit. Using regular EVA foam alone can become slippery when wet. If fabric-backed EVA is unavailable in your area, use regular EVA and glue cotton fabric to it using fabric or craft glue. Recycled fabric covered mouse pads are particularly handy material for insoles.

Make sure your printer is set to 100% - Do Not Scale and print this page.

Using 3 to 5mm thick material, trace and cut out the size you need using the template below.
