

EXTENSION AT HOME CARE

Please take time to read this information before having your hair extensions applied. If you have any further questions about how to care for your new hair, please consult your Line One Artist!

These guidelines, if followed, ensure your own hair is kept in good condition and allowed to grow freely while wearing hair extensions.

MANE POINTS

01.

DO wash your scalp gently with the pads of your fingers.

02.

DO dry hair after washing. Always ensure the attachments are fully dry.

03.

DO be gentle with your hair. If wearing a bun or ponytail, if there is any pain your style is too tight.

04.

DO hold hair at the base when brushing.

05.

DON'T allow sunscreen to touch hair. It turns hair pink.

THINGS YOU WILL NEED:

Shampoo

Use salon-grade volumizing shampoo. We recommend Line One Hair Extension Shampoo. Do not use any moisturizing products with oil.

Conditioner

Use a lightweight, hydrating conditioner. We recommend Line One Hair Repairing Conditioner. Ensure conditioner is never applied to the roots or connections of extensions, as this will cause slippage.

Leave-Ins

Use a leave-in conditioner like Line One Hair Weightless Detangler on the mids and ends of your hair before brushing, and a treatment oil like Line One Hair Remedy Oil.

Hair Brush

Use a metal bristle detangling brush to ensure hair is detangled without pulling. Use metal bristle brushes only, no natural or boar bristles.

Hair Dryer

Drying your hair is key! We recommend the Bioprogramming Repronizer. This device will heal your natural hair the more you use it! Purchase from y-axisbeauty.com

DAY TO DAY ROUTINE:

Washing Your Hair Extensions

Brush hair gently and apply 1 pump of Remedy Oil to the ends before shampooing. This will avoid tangling after the shower. Hair is like a sponge, if it's full of good moisture, it won't be able to soak up pollutants in the water.

Wash your hair standing in the shower, never in the bath or upside-down. Keep the attachments at natural fall. First, rinse hair thoroughly before shampooing to remove buildup. Wash scalp gently with the pads of your fingers, gently exfoliating your scalp. Do not scrub in round motions around the attachments, this will cause tangling.

Shampoo hair no less than every 3-4 days. Keep your scalp clean and without excess oil buildup. Treat your scalp like your face, hair cannot grow properly if you have a dirty scalp clogged with oil and product.

Drying Your Hair Extensions

Always dry your hair after washing. Do not leave hair wet. If you're going to air dry, ensure you blow dry the attachments thoroughly first. Squeeze excess water out of the extensions, do not rub.

DAY TO DAY ROUTINE:

Brushing Your Hair Extensions

Using a metal bristle detangling brush, brush gently starting from the ends. Never start brushing your hair at the root. Hold hair at the base of the attachments before brushing to reduce tension.

Brush your hair regularly- at least 2x per day.

Styling Your Hair Extensions

Be gentle with your hair. If wearing your hair in a bun or ponytail style, if you feel there is any tension or pain, your style is too tight. Lower ponytails and styles that keep the attachments at natural fall are advised.

Caution! Avoid extreme heat at the root or attachment of extensions. Excessive heat too close to the attachments will ruin your hair extensions. Blowdryers should be held at least 10 inches away from the root, at medium heat.

We recommend the Bioprogramming Hairbeaureon Straight and Hairbeaureon Curl for healthy heat styling. Purchase from y-axisbeauty.com.

Activities

If you are going on vacation, in a pool, in the ocean, working out, et cetera- we advise you to loosely braid your extensions for the duration of the activity. As soon as you are done, take your hair down, and wash and dry it thoroughly. Do not ever leave hair in a wet braid or bun. Leaving hair up and wet for a period of time will cause tangling and loosen attachments.

You should never go on a boat, ride in a convertible, or any other windy activity without your hair in a braid to prevent matting.

Sunscreen

If you will be using sunscreen on your face or body, please be sure to use a mineral based sunscreen to prevent the color of your extensions from changing. Avoid sunscreen touching extensions if and when possible, but mineral sunscreens will minimize color changing. Be sure to avoid:

- Avobenzone
- Octocrylene
- Oxybenzone
