

Tech Information

Stronger clutch engagement

40% more performance out of stock clutch!!

The VP clutch is the most cost effective kit to up grade your H-D stock clutch without any modifications.

Up to 40% reduce clutch lever effort.

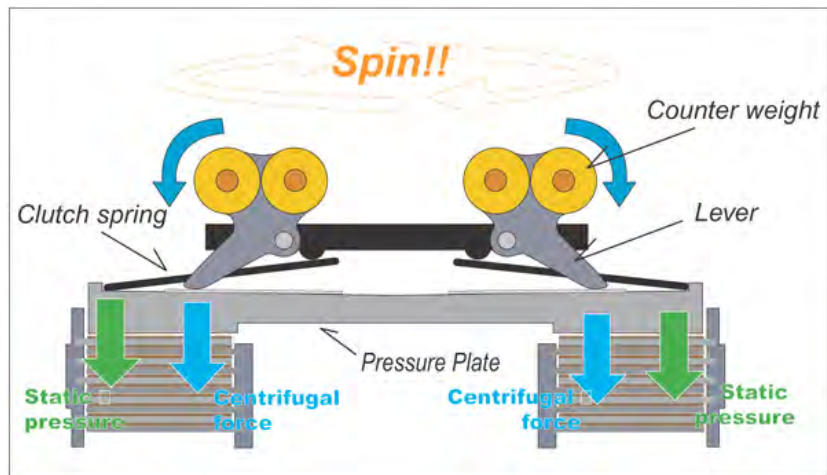

Up to 40% more additional pressure to make a stronger clutch.

Stronger clutch engagement than stock

The VP clutch has two different types of pressure. Regular clutches have an only static pressure by clutch springs. But the VP clutch has two different types of pressure. One is a **static pressure**, and another is a **centrifugal force** by VP clutch as an additional pressure.

The VP clutch increase the clutch clamping force by using the centrifugal force as engine RPM increases.

Static Pressure <small>(Pressure by Clutch springs)</small>	+	Centrifugal Force <small>(Pressure by Lock-up head)</small>	=	Total Clutch Pressure
