

LymphaTech

Measure the impact of enhanced patient care

Capture accurate baseline volume and percentage difference measurements for all patients with **medi's LymphaTech** mobile solution. Quickly obtain, share and report reliable data for improved patient evaluation and tracking.

LymphaTech ensures reliability through simple, standardised procedures, has low inter-operator variability, boasts 99% accuracy and is validated by published third-party research.

99% Accuracy

Each scan captures hundreds of thousands of data points. Validated by third party research.

Reduce variability by 75%

Regardless of who takes the scan, consistent measurements improve efficiency and workflow.

Under 60 seconds

Volume and % difference measurements in less than a minute enhances clinical value.

Analyse and optimise

Track progress and compare changes. Generate custom reports for recording.

Monitor, report and share volume measurements.

LymphaTech's algorithms automatically calculate volume and percentage differences between limbs.

Quickly recognise and align limb segments and landmarks across all successive scans. Visualise changes in and between limbs for comprehensive assessment.

Streamline record keeping through automated reporting with printable, exportable records that are easily attached to patient records.

Achieve superior patient outcomes every session.

Capture measurements during each patient visit to conduct a detailed assessment of current progress, ensuring a comprehensive understanding of the treatment trajectory.

Continuously track these measurements to refine treatment strategies, enabling tailored and effective interventions.
