FAQ - Framehouse

Use

Which features does the Framehouse offer me?

The Frame House offers anyone the possibility to create their own space at any location. It consists of different elements that can be assembled and adjusted to your needs. Choose between a 4 arcs or 5 arcs base and add the elements you want: an optional platform or roof.

Safety

What safety hazards does the Framehouse pose?

There are no particular safety hazards for the Framehouse.

Maintenance

What do I need to pay attention to when maintaining the Framehouse?

The Framehouse is made of Douglas wood. This type of wood is often used in outdoor furniture as it does well in rainy conditions. To prolong the life of your Framehouse and slow down the aging process, we recommend an oil treatment about twice a year. Do not use a high-pressure cleaner on this type of wood.

How important is maintenance to the Framehouse?

Without treatment, the wood will turn gray over time.

Weather conditions

Which weather conditions will the Framehouse withstand?

The Framehouse is made of Dutch Douglas wood and, in principle, can withstand all weather conditions. The aging process of the wood will cause the Framehouse to gray if you choose to leave the wood untreated.

Material

What materials does the Framehouse consist of?

Douglas wood, electrolytic zinc plated steel.

How much does the Framehouse weigh?

The Framehouse can be configured to your needs. The weight depends on the parts you choose.

Is the Framehouse easy to move?

Once the Framehouse is built and set in place, it is too heavy to move.

Packaging

How will the Framehouse be packaged?

The different elements of the Framehouse will be delivered in flat pack packaging.

What packaging materials are used?

Cardboard.
