

AMERICAN BARBELL TRAINING BAR

DESCRIPTION:

The American Barbell Training Bar is a solid, versatile barbell for just about any application. We've tested it against the day-to-day abuse of heavy training and it's proven to last.

The bar shaft is made from precision ground alloy steel and the strength of the shaft is tested with every shipment of raw material to ensure we have a consistent 190,000 PSI tensile strength. This attention to detail also allows for excellent whip and long-term performance of our bars. The shaft is finished in hard chrome for added durability and the knurl pattern is crisp with just the right amount of tack.

The bar sleeves are precision machined and coated with hard chrome for protection against dropping and impact. Sleeves rotate around high strength composite bushings used in aircraft and automotive industries for smooth rotation under load.

TECHNICAL SPECS

Product SKU: OB20-CH/OB15-CH

AMERICAN BARBELL TRAINING BAR

Available Sizes:	15KG/20KG	System:	Bushing
Diameter:	25MM/28MM	Shaft:	Precision Ground Alloy Steel w/Hard Chrome Coating
Length:	2010MM/2200MM	Sleeve Finish:	Hard Chrome
Center knurl:	No	Application:	Olympic Weightlifting, Weightlifting
Loadable Sleeve Length:	12.598"/16.338"	Manufactured:	Made in USA
Tensile Strength:	190K	Warranty:	Limited Warranty
