

THE ELIXIR DOSING GUIDE

DOSING YOUR PET

This is considered a mid-range dosage starting point. The chart on the next page shows how many drops are needed to give this starting dosage based on LIX's ELIXIR bottles which come in 30ml bottles.

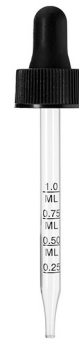

A full dropper is 1ml and contains about 20 drops. You can increase your dog's dosage up to 2-3 times the amount if you are not seeing any results. For pain relief, you may need to administer twice daily for a few weeks to see relief.

EASY GUIDE DOSING

If you are tired of counting out drops, then realize that our droppers will contain 20 drops when filled to max 1.0 mL line on dropper.

A full dropper doesn't mean that the liquid goes all the way to the top. If you notice the dropper on the right, 1ml is only about 60% of the way up the dropper.

If your dropper doesn't have the ml marks, just know that 1ml is about 60% up the stem.
