360° Rotatable Head

- Easy to illuminate various treatment areas

Small Light Head

- Easy to access to posterior molars which offers better patient experience

Special Lens Design

- Unique lens design forms a concentrated beam for uniform curing

Broad Spectral Range 380 nm-515 nm

- Why broad spectral range?
- Most of resins use camphorquinone (CQ) materials, but some manufacturers choose alternative initiators such as TPO to reduce the yellow impact caused by CQ. TPO can only be activated by the light wave below 410nm. CuringPen-E has a broad spectrum which could effectively cure different resins.

Ultra Power

- Light intensity now up to 3000mw/cm²
- High light intensity results in deeper cure depths which could curing resins more efficiently and with short time
