ABOUT US

Our Mission

We began our journey towards a world beyond single-use plastics in early 2019.

Working in the food and beverage industry in Hong Kong, we witnessed a shocking reliance on single-use plastic products. We knew that to make a change we had to change the supply chain to offer viable alternatives to plastic products in order to actually reduce the amount of plastic consumption and consequent waste.

Beyond Plastic aims to reduce and ultimately end the single-use plastic system that we live in.

We live in a world where long-term alternatives materials are more accessible, both to businesses and to individual consumers.

We believe in corporate social responsibility as a value therefore we donate 20% of our profits to charities.

We also organize monthly events in Hong Kong to engage the general public and promote environmental education through civil actions.

We believe that we have a responsibility to be a part of the solution, not the problem, inspired by our children, we believe that we have a responsibility in building a different world for the future.

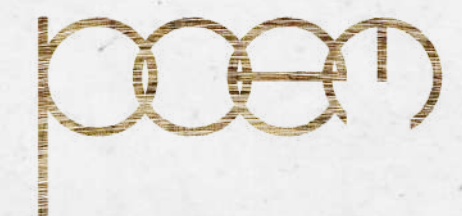

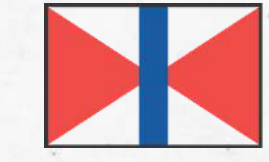

OUR PHILOSOPHY

We provide biodegradable, compostable and ecological products both to retail customers and to businesses through our B2B Wholesale.

Our products are carefully selected based on their environmental impact.

The majority of the product material used is bamboo. Bamboo forests can grow up in a few years up to 1 meter a day or 30 times faster than a tree.

OUR PARTNERS

OUR CERTIFICATIONS

Our core range is made of sugar cane bagasse pulp, a natural product of the sugar cane and wheat industries.

We also offer a full range of Forest Stewardship Council certified bamboo paper products.

We use natural ink for printing which is kinder to the planet, like soy inks or *Flexographic inks*.

Home compostable in weeks in normal conditions. There is no need for commercial composting (unlike most PLA and traditional wax-coated papers)

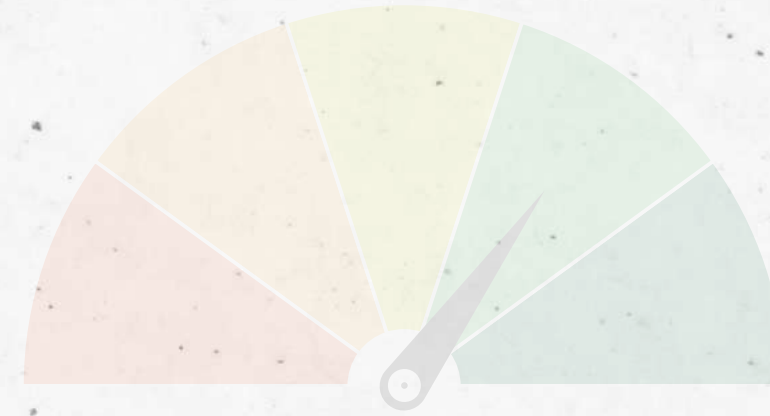

All products carry one or more of the following certifications:

A close-up photograph of bamboo stalks. The stalks are green and covered in small water droplets. A bamboo shoot is visible in the foreground, partially obscured by a semi-transparent grey box containing the word 'BAMBOO'. The background is a soft, out-of-focus green.

BAMBOO

WHY BAMBOO?

Bamboo is a plant with the fastest regrow in the world, up to one meter per day, so we could reduce deforestation by using this sustainable resource.

Nearly 4 billion trees worldwide are cut down each year for paper productions, representing about 35 percent of all harvested trees.

Trees are the lung of the planet. They breathe in carbon dioxide and breath out oxygen.

Additionally, they provide habitat for birds and other wildlife.

BAMBOO TISSUE

BAGASSE CONTAINERS

WHAT IS BAGASSE?

Bagasse, otherwise known as sugarcane pulp, is a by-product of the sugarcane industry. It is the fibrous substance that is left behind after the juice of the sugarcane plant is harvested.

100% biodegradable and compostable.

The best alternative to plastic containers.

These containers are recommended for all types of food including soups, sauces and salads.

Resistance to high temperature 200/220°C static or conventional oven.

Compostable in 90 days.

Microwave and freezer safe.

- ZPP047 **Paper Tape**
50mm×50mt
Natural rubber applied as adhesive

BEE-O-PACK

WHY BEESWAX?

The beeswax has breathable and antibacterial properties that promote the good preservation of food, which together with the resins and oil protect the food and make the fabric adhesive.

We use only certified organic wax that is free of harmful chemicals like kerosene and stearin. In addition, our wax comes from local Piedmontese beekeepers who put the good and respect of the bees and the environment first. Good wax is the result of a balanced and sometimes even necessary harvest for the health of the hive, where there is no sacrifice or exploitation of insects.

BEE-O-PACK

Organic Reusable "plastic free" food wrap alternative to cling film and aluminum. Can last for up to 1 year! Antibacterial and breathable, beeswax food packaging keeps food fresh for longer and reduces food waste.

- Reusable and washable
- 100% organic & natural
- Biodegradable and eco-compatible

Different sizes for different uses

To cover cups, small bowl containing food such as large pieces of cheese, bread, rolls, fruit and vegetables.

Cover serving dishes and large pans, aromatic herbs and so much more!

30×30mm

PLA

WHAT IS PLA?

PLA, polylactic acid, is a thermoplastic monomer derived from renewable, organic sources such as corn starch or sugar cane.

Using biomass resources makes PLA production different from most plastics, which are produced using fossil fuels through the distillation and polymerization of petroleum.

CLING WRAP

100% Biodegradable and Compostable within 180 days

Our clingwrap, made from corn starch, can be disposed together with food residues. The film is suitable for contact with any food, including those with a high fat content and keeps the freshness of each food for a long time both inside and outside the refrigerator. “The wrap is equipped with a cutter slide to cut more easily.

All the elements included in the packaging are produced with PLA”

Do not use in the traditional oven, gas, electric or microwave.

• Home compost and Industrial compost Certificate

- **ZPI024 Pla Cling Wrap**

45cm × 300mt

Available on request

PASTRY BAGS

100% Biodegradable and Compostable within 180 days

Our pastry bag, made from corn starch, can be disposed together with food residues. The material is suitable for contact with any food, including those with a high fat content.

All the elements included in the packaging are produced with PLA”

Do not use in the traditional oven, gas, electric or microwave.

• Home compost and Industrial compost Certificate

- **ZPI093 Pla Pastry Bag**

Available on request

- **ZPI040 Garbage Bags**
22my - 49L - 746×604mm
25 bag × 20 rolls/box

EXTRA VIRGIN OLIVE OIL

CORATINA

Our Italian Mono-Cultivar Coratina is a small-production Extra Virgin olive oil from Apulia, the “heel” of Italy’s “boot”.

Made from 100% Coratina olives, hand-harvested and rigorously cold-pressed within a few hours after being picked from the trees.

The love and dedication that goes into producing this exquisite example of Italy’s finest extra virgin olive oils has led it to stand out among all other Italian cultivar.

Higher in antioxidants, polyphenol and solid lipid structure places it at the top of all Italian Extra Virgin olive oils. Many purchase it to take one tablespoon at a time as a nutritional supplement.

Flavour Profile: bold and balanced, pungent and peppery after-taste, low acidity.

Organic is much more than a label or a certification.

Organic stands for quality and commitment of a responsible use of nature resources.

- EVO1 Organic Extra Virgin Olive Oil 5L

- EVO2 Organic Extra Virgin Olive Oil 500ml

30 meters of floss
Refillable glass dispenser
Metal cap

- **ZPB006 Silk Floss Refill**
2 floss, 30 meters

BALADE EN PROVENCE

SOLID CARE

Rich, natural and environmentally friendly solid alternatives.

Solid bars are not only better for you but also for the environment. Most liquid cosmetics come in plastic packaging, can irritate the skin and contain harmful ingredients and up to 85% water.

Our solid beauty bars, on the other hand, are certified vegan and organic and are packaged in 100% compostable cardboard (printed with vegetable ink).

Handmade by craftsmen in France by cold saponification. The oils contained in the bars are not heated, which preserves their natural properties.

Yes! All our products are certified BIO Earth Durable.
