ATTENTION:

The glasswasher model no., serial no., voltage, Hz and phase are needed to identify your machine and to answer questions.

Please have this information on-hand if you call for service assistance.

REGISTER YOUR PRODUCT to ACTIVATE YOUR WARRANTY.

Two ways to register:

- Visit our website at: http://www.moyerdiebel.com/service/ for the USA http://www.championindustries.com/warranty-registration for Canada
- Use the FAX FORM on the next page.

LIMITED WARRANTY

Moyer Diebel. (herein referred to as The Company), 3765 Champion Blvd., Winston-Salem, North Carolina 27105, and 2674 N. Service Road, Jordan Station, Canada, LOR 1SO, warrants machines, and parts, as set out below.

Warranty of Machines: The Company warrants all new machines of its manufacture bearing the name "Moyer Diebel" and installed within the United States and Canada to be free from defects in material and workmanship for a period of one (1) year after the date of installation or fifteen (15) months after the date of shipment by The Company, whichever occurs first. [See below for special provisions relating to glasswashers.] Warranty registration must be submitted to Moyer Diebel within ten (10) days after installation either online on the Moyer Diebel website (http://www.moyerdiebel.com/service/) for the USA or http://www.championindustries.com/warranty-registration for Canada or by fax on the form provided in the front of this manual. If warranty registration is not returned to The Company within such period, the warranty will expire after one year from the date of shipment. The Company will not assume any responsibility for extra costs for installation in any area where there are jurisdictional problems with local trades or unions. If a defect in workmanship or material is found to exist within the warranty period, The Company, at its election, will either repair or replace the defective machine or accept return of the machine for full credit; provided; however, as to glasswashers, The Company's obligation with respect to labor associated with any repairs shall end (a) 120 days after shipment, or (b) 90 days after installation, whichever occurs first. In the event that Moyer Diebel elects to repair, the labor and work to be performed in connection with the warranty shall be done during regular working hours by The Company's authorized service technician. Defective parts become the property of The Company. Use of replacement parts not authorized by The Company will relieve The Company of all further liability in connection with its warranty. In no event will The Company's warranty obligation exceed The Company's charge for the machine. The following are not covered by The Company's warranty:

- a. Lighting of gas pilots or burners.
- b. Cleaning of gas lines.
- c. Replacement of fuses or resetting of overload breakers.
- d. Adjustment of thermostats.
- e. Adjustment of clutches.
- f. Opening or closing of utility supply valves or switching of electrical supply current.
- g. Cleaning of valves, strainers, screens, nozzles, or spray pipes.
- h. Performance of regular maintenance and cleaning as outlined in operator's guide.
- i. Damages resulting from water conditions, accidents, alterations, improper use, abuse, tampering, improper installation, or failure to follow maintenance and operation procedures.
- j. Wear on Pulper cutter blocks, pulse vanes, and auger brush.

Examples of the defects not covered by warranty include, but are not limited to: (1) Damage to the exterior or interior finish as a result of the above, (2) Use with utility service other than that designated on the rating plate, (3) Improper connection to utility service, (4) Inadequate or excessive water pressure, (5) Corrosion from chemicals dispensed in excess of recommended concentrations, (6) Failure of electrical components due to connection of chemical dispensing equipment installed by others, (7) Leaks or damage resulting from such leaks caused by the installer, including those at machine table connections or by connection of chemical dispensing equipment installed by others, (8) Failure to comply with local building codes, (9) Damage caused by labor dispute.

Warranty of Parts: The Company warrants all new machine parts produced or authorized by The Company to be free from defects in material and workmanship for a period of 90 days from date of invoice. If any defect in material and workmanship is found to exist within the warranty period The Company will replace the defective part without charge.

DISCLAIMER OF WARRANTIES AND LIMITATIONS OF LIABILITY. THE COMPANY'S WARRANTY IS ONLY TO THE EXTENT REFLECTED ABOVE. THE COMPANY MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED, TO ANY WARRANTY OF MERCHANTABILITY, OR FITNESS OF PURPOSE. MOYER DIEBEL SHALL NOT BE LIABLE FOR INCIDENTAL OR CONSE-QUENTIAL DAMAGES. THE REMEDIES SET OUT ABOVE ARE THE EXCLUSIVE REMEDIES FOR ANY DEFECTS FOUND TO EXIST IN THE COMPANY'S DISHWASHING MACHINES AND THE COMPANY'S PARTS, AND ALL OTHER REMEDIES ARE EXCLUDED, INCLUDING ANY LIABILITY FOR INCIDENTALS OR CONSEQUENTIAL DAMAGES.

Moyer Diebel does not authorize any other person, including persons who deal in Moyer Diebel dishwashing machines to change this warranty or create any other obligation in connection with Moyer Diebel Dishwashing Machines.

Rotary Type Fully Automatic Glasswashing Machine

Dimensions shown in inches and [millimeters]

ι	Jtilities
	Electrical 208 - 230/60/1, 15 amp
1	Hot water connection 1/2" [13] IPS. Flow pressure 25-95 psi [172.5-656 kPa]
2	Cold water connection 1/2" [13] IPS. Flow pressure 25-95 psi [172.5-656 kPa]
3	Drain connection 1-1/2" [38] tailpiece. Connect to drain size according to local plumbing code.

	Uncrated	Crated
Height	39" [991]	46-1/2" [1181]
Width	25" [635]	27" [685]
Depth	27" [686]	27-1/2" [698]
Ship Wt. lbs/kg	156/71	176/80

NOTE: DF Models supplied with 6 ft. [1829] plug in cord. (NEMA 6-15P)

Warning: Plumbing and electrical connections must be made by qualified personnel who will observe all the applicable plumbing, sanitary and safety codes.

SPECIFICATIONS Capacity (hr.) 2-1/2" [64] glasses	1200
2-1/2 [04] glasses	1200
Water Consumption Cold water (approx.)	2.5 US gpm; 9.5 l/ m;
Hot water (initia l fi ll)	2.1 imp. gpm 3 US gallons; 11.35 liters; 2.4 imp gallons
(Max use – approx. 12 US gph – 1	, ,
Temperatures °F/C Inlet water (hot) Inlet water (cold)	140-160/61-69 75/24
Heating Tank heat, electric (kW)	3
Conveyor Movement	Clockwise

Due to an ongoing value analysis program at Moyer Diebel, specifications in this catalog are subject to change without notice.

Installation

Unpacking

- 1. Move the glasswasher to its permanent location.
- Open the door and remove the box marked "LEGS".
 The box contains (4) 6" [152cm] screw-in legs.
 These legs are threaded tightly into the base of the machine.
- 3. Remove (2) 1/2-13 x 2" bolts holding the glasswasher to the pallet.
- 4. Lift the front door off the bottom hinges and set carefully aside.
- 5. The illustrations below show one method to install the legs without lifting the glasswasher completely off the pallet.

NOTE:

The installation of the dishwasher must comply with all local electrical, plumbing, health and safety codes or in the absence of local codes, installed in accordance with the applicable requirements in the National Electrical Code, NFPA 70, Canadian Electrical Code (CEC), Part 1, CSA C22.1; and the Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations, NFPA 96.

CAUTION:

The glasswasher water inlet plumbing and the drain piping extend below the pallet. Use extreme care when moving the glasswasher to prevent damage to the glasswasher plumbing.

Remove the (2) pallet bolts holding the glasswasher to the pallet.

Glasswasher plumbing connections extend below the pallet.

Continued on the next page.

Installation

Unpacking (continued)

- 6. Use two people to move the machine in order to install the legs.
- 7. Have one person behind the glasswasher tilt it back as the person in front twists the machine to the right. This makes the front left leg mounting hole accessible.
- 8. Screw one of the legs tightly into place. Repeat this process for the remaining legs.
- 9. Lift the glasswasher off the pallet, and re-install the front door..
- 10. Level the glasswasher front-to-back and side-to-side by adjusting the leg bullet feet in or out.
- 11. Compare the site utilities with the data plate specifications. If they agree, then proceed with the installation according to the diagrams on the next page.
- 12. Remove the packing material in the glasswasher and discard, then remove any protective film on the machine.

Tilt the machine back to clear plumbing connections.

Twist the machine to the right until the front right leg mounting hole is accessible.

Make sure to install the legs tightly.

Level front-to-back and side-to-side

Utility Connections

The installation of this machine must be performed by personnel who will follow all safety, electrical, plumbing, and sanitation codes.

HOT WATER CONNECTION:

140-160°F/60-71°C

1/2" IPS

Flow Pressure 25-95 PSI [173-655 kPa]

Install water shut-off valves and check-valves in the water inlet supply lines and as close to the machine as possible.

COLD WATER CONNECTION:

75°F/24°C

1/2" IPS

Flow Pressure 25-95 PSI [173-655 kPa]

Install water shut-off valves and chack-valves in the water inlet supply lines and as close to the machine as possible.

DRAIN CONNECTION:

Gravity
1-½" Tailpiece (slip-fit)
Maximum drain flow 3 US gallons/min [11L/min].

ELECTRIC CONNECTION: 208-230VAC/50-60Hz/1PH

4 Min/Max 15A
6ft./1.5m flexible cord and plug supplied
NEMA 6-15P electric outlet.

Installation (continued)

Chemicals

Glassware cleaning chemicals

- 1. A qualified chemical supplier should supply liquid detergent, sanitizer and rinse-aid for the glasswasher. The glasswasher manufacturer does not sell glassware washing chemicals.
- 2. A chemical's formulation and strength vary depending on the chemical supplier; therefore, the specifications given below are approximations only.
- 3. The glasswasher has 3 built-in chemical dispensing pumps for
 - Detergent Use a commercial grade non-chlorinated detergent specifically made for glasswashers. The recommended concentration of detergent should be .35%
 - Sanitizer 2 types of sanitizer may be used.

(5.25%) Sodium hypochlorite *(chlorine bleach)* to provide a minimum concentration of 50 ppm in the final rinse. The 50 ppm concentration must be checked using test strips to make sure the proper concentration is maintained.

lodophor (*lodine formulated with a rinse agent*), to provide a minimum concentration of 12.5 ppm in the final rinse. The 12.5 ppm concentration must be checked using test strips to make sure the proper concentration is maintained.

Rinse-aid - Consult your chemical supplier for the proper type of rinse-aid to use in the glasswasher.

Installing chemical supply containers and chemical pick-up tubes

There is enough space inside the lower compartment to hold
 one gallon containers for detergent, sanitizer, and rinse-aid.

The contents of each container must be marked clearly.

- 2. The glasswasher comes equipped with 3 gray tubes, called stiffener tubes, and tubing for each chemical pump.

 The tubing inserted in the chemical container has a strainer.
- 3. The outlet tubes from the supply containers to the chemical pumps are marked with color-coded labels, they are:

RED - Detergent (DET)
CLEAR - Sanitizer (SAN)
BLUE - Rinse-aid (R/A)

- 4. Pull the stiffener tubes and chemical tubing forward and out of the compartment. Make sure the tubing is not tangled or kinked.
- Insert the stiffener tube and pick-up tubing into its container and stow the supply containers in the lower compartment as shown to the right.

Priming the Chemical Injectors and Approximate Chemical Settings

Each chemical injector can be adjusted using its prime button and concentration adjusting screw. These controls are located on the right side of the control box located in the lower compartment of the glasswasher. The white injector rotors are visible through the control box window.

Chemical Injector Prime and Concentration Controls

NOTE:

All of the chemical settings below are approximations.

Consult a qualified chemical representative trained in the use of the test equipments required for taking samples and performing adjustments.

1. Priming the Pumps:

Make sure the proper chemical pick-up tube is in its supply container, then push and hold the prime button until the detergent, sanitizer and rinse-aid feed tubes are full of chemicals. Release the Prime button.

2. Approximate Chemical Settings:

The approximate chemical volume dispensed by the chemical injectors can be determined by counting the number of revolutions of the injector rotor.

Detergent - 1 revolution in 1-second of the detergent pump rotor ~ 0.35% concentration. Sanitizer - 1 revolution in 5-seconds ~ 12.5 ppm of lodophor or 50 ppm of chlorine.

Rinse-aid - 1 revolution in 8-seconds ~ the median volume recommended.

Turn the Injector Concentration screws clockwise to increase or counter-clockwise to decrease the volume of dispensed chemical.

3. The detergent chemical setting must be performed when the hot-water fill solenoid valve is open. The hot-water valve is open when the power switch is in the ON position during initial fill and when the detergent tank float assembly calls for hot water

The sanitizer and the rinse-aid setting can be performed whenever the cold-water fill solenoid valve is open. The cold-water fill valve is open whenever the glasswasher power switch is ON and the conveyor is turning. A separate rinse-aid is not needed when lodophor is used as a sanitizer. Turn the Injector Concentration Screw fully counter-clockwise until the rinse-aid injector rotor stops turning.

Quick Operation Guide

The glass washing machine is designed to automatically wash a wide variety of glassware.

Operation

Assembling the Glasswasher

- 1. Make sure the power switch is in the OFF postion.
- 2. Install the wash arms and rinse spray arms. The spray arms have locating notches in the end of each arm. Push the spray arm straight into the hub. Do not twist.
- 3. Install the conveyor assembly as follows:

Insert the conveyor into the wash chamber keeping the rear raised. Pull the conveyor forward until it meshes with the drive gear located at the front of the wash chamber.

Continue to pull the conveyor forwards as you lower it on the pivot.

- 4. Install the stainless steel cylinder in the center of the conveyor.
- 5. Install the conveyor shut-off assembly (plexiglass divider).
- 6. Install the right and left hand tray.
- 7. Install the curtain assembly.
- 8. Install the upper and lower scrap screens.
- 9. Intsall the standpipe in the detergent tank.
 Twist slightly to make sure it seats securely in the drain.
- Install the drain tray/waste collector (if equipped).
 Make sure the drain fitting is secure.
- 11. Make sure the chemical supply containers are full.
- 12. Close the door.

Filling the Wash Tank

- 1. Ensure that the overflow/drain tube is in place in the detergent tank.
- 2. Flip power on-off/flush switch to the "ON" position. The water will fill until the proper water level is reached.
- 3. The water temperature is controlled by a tank heater and an adjustable thermostat. The thermostat should be set for a minimum of 140°F/60°C.

Operating Instructions

- 1. Ensure that the chemical supply containers are full.
- 2. Detergent is fed into the tank in controlled amounts by the detergent dispensing pump. Use detergent at a strength recommended to you by your chemical supplier.
- 3. Open the front door and flip the on-off/flush switch to the "ON" position. The detergent tank will fill automatically.
- 4. Load glasses on the conveyor. The conveyor will stop when the glasses contact the conveyor shut-off switch.

Cleaning Instructions

NOTE:

The cleaning instructions are attached to the inside of glasswahser front door.

Daily Cleaning or after 8 hours of Operation:

- 1. Make sure that any glasses on the conveyor are clean, then remove them from the conveyor.
- 2. Push the on-off/flush switch on the right-hand side of the glasswasher control box to the "OFF" position.
- 3. Remove the splash curtain from the curtain hooks located at each end of the splash curtain rod.
- 4. Remove the (2) stainless steel conveyor guards located at each corner of the glasswasher and the plexiglass stop assembly.
- 5. Remove the cylindrical stainless steel conveyor guard located in the center of the glasswasher.
- 6. Remove the conveyor by lifting the rear of the conveyor while pulling it forward to disengage the conveyor drive gear located at the right front corner of the wash chamber.
- 7. Take these parts to a sink and wash in hot soapy water using a soft brush and cloth, then rinse with fresh water and set aside to air dry.

DO NOT:

Do not clean with harsh detergents or abrasive scouring pads.

Do not strike the conveyor on the floor or any hard surface.

Do not strike screens on hard surfaces.

- 8. Clean the wash chamber interior with hot soapy water, then rinse with fresh water. Wipe the interior with a soft cloth. Allow the wash chamber to air dry overnight.
- 9. Remove the upper scrap screen, remove large debris in a trash can, take screen to a sink, and flush screen with fresh water.

DO NOT:

Do not leave water in the glasswasher overnight.

- 10. Remove the lower scrap screen, remove large debris in a trash can, take screen to a sink and flush screen with fresh water.
- 11. Remove the stainless steel wash tank cover; clean with hot soapy water at the wash sink. Wipe clean and dry.
- 12. Remove the detergent wash tank drain/overflow to drain the tank, then flush the tank with fresh water and wipe with a clean cloth.
- 13. Reassemble the glasswasher in reverse order for continued operation, or leave disassembled overnight to aid drying.

Continued on the next page.

Cleaning Instructions (continued)

Weekly Cleaning, after 7 days or 56 hours of Operation

- 1. Complete 1-11 in the Daily Cleaning section on the previous page.
- 2. Remove chemical supply containers if they are stowed inside the glasswasher, wipe any chemical spills with a damp cloth. Detergent and sanitizer (Chlorine) are corrosive on metal and must be removed as much as possible.
- 3. Check the inlet chute on the right side of the detergent tank and flush with fresh warm water to clean any chemical residue.
- 4. Check chemical supply lines. If a line is restricted, remove the pick-up tube from the container, then insert it into a separate container filled with fresh warm water.
- 5. PUSH and HOLD the PRIME BUTTON labeled for the matching chemical tube until the water moves freely through the supply tubing. Repeat for each chemical making sure that the warm water is fresh and free of any other chemical.
- 6. Return the pick-up tubes to the chemical container matching the label on the supply tube, then PUSH and HOLD the PRIME BUTTON for the corresponding chemicals until the chemical moves freely through the supply tube.
- 7. Inspect the chemical dispensing pumps visible behind the plexiglass window located on the front of the control box.
- 8. Find the spray tube assemblies, (3 spray tubes each) located in the wash chamber. There are (2) assemblies in the top and (2) assemblies in the bottom. Pull (1) assembly at a time. Check the black O-ring on the spray tube hub for damage, replace if missing.
- 9. Insert and twist the small brass drill bit (reamer) in each spray tube hole to clean. Insert and twist the large drill on the wood handle. Push the large reamer down the length of the spray tubes. Insert and twist the long brush in each spray tube to remove loose debris. Flush the spray tube assembly, then reinstall in the glasswasher. Repeat for each spray tube assembly.
- 10. Reassemble the glasswasher in reverse order for continued operation, or leave disassembled overnight to aid drying.

Troubleshooting

The following troubleshooting guide can help identify a problem and provide a solution. Inspect your glasswasher before you contact an authorized service representative.

Problem	Cause(s)	Solution(s)
Glasswasher will not turn ON.	Main breaker/fuse box is OFF.	Turn breaker/fuse box ON.
	Disconnect fuse blown/breaker tripped.	Turn breaker/fuse box ON. Replace fuse/reset breaker.
	Glasswasher ON/OFF switch OFF. Power cord unplugged.	Flip ON/OFF switch ON. Plug-in power cord.
	Clean glass(es) touching the conveyor shut-off switch.	Remove clean glasses from the rinse-side of the glasswasher.
Conveyor will not rotate.	Conveyor center hub out of position.	Reposition the conveyor.
	Conveyor support(s) out of position and/or broken.	Reposition or replace support(s).
	Drive gear out of position.	Reposition drive gear.
		Replace the conveyor.
	Gear teeth on conveyor worn or broken.	
	Gear teeth on drive gear worn	Replace drive gear.
	or broken.	Remove object.
	Object jamming the conveyor.	·
Conveyor will not stop rotating.	Conveyor drive motor defective.	Authorized Service Agent may replace conveyor drive motor.
	Conveyor stop switch needs adjustment or switch is defective.	Authorized Service Agent may adjust or replace switch.
Conveyor rotates in wrong direction.	The drive motor is turning the conveyor backward.	Authorized Service Agent may remove drive motor and rotate motor stator 180° and re-install.
Upper scrap screen is hard to remove.	Large debris, such as broken glass, is on screen.	Remove conveyor and lower spray arm(s). Remove debris.
	Scrap screen bent and/or broken.	Authorized Service Agent may repair or replace damaged screen.
	Door magnet broken or missing.	Replace door magnet.
Front door will not close or remain closed.	Door bent or broken.	Straighten or replace door.
Glasswasher not level or rocks back and forth.	Leg(s) are not screwed firmly into machine base.	Tighten leg(s) or replace.

Problem	Cause(s)	Solution(s)
Water sprays our the front of the glasswasher.	Splash curtain is missing, positioned incorrectly, or damaged.	Re-install the splash curtain or replace the splash curtain.
	Spray arm(s) are damaged or missing.	Replace spray arm(s).
	Glass(es) interferes with splash curtain.	Reload glass(es).
	Clogged spray arm(s) makes water come out in wrong direction.	Clean the spray arm(s).
Poor washing results.	Water volume from wash and/or rinse spray arm(s) low.	Clean spray arm(s).
	Water level in detergent tank low.	Re-install drain/overflow tube in wash tank. Service Agent must adjust water level switch until water level is below top of overflow.
	Water level float ball stuck or filling with water.	Clean float ball, replace if filling with water.
	Water level switch defective.	Authorized Service Agent may replace switch.
	Detergent and/or rinse-aid supply low.	Refill chemical supplies.
	Wash pump and/or water valve(s) and/or line strainers clogged or defective.	Authorized Service Agent may replace wash pump and/or solenoid valve(s). Clean line strainers.
	Detergent tank temperature low.	Raise incoming water
	Chemical injectors out of	temperature or adjust thermostat for 140°F/60°C in detergent tank.
	adjustment.	Contact chemical supplier to calibrate settings.
Chemical supply container(s) fill with water.	Peristaltic tube(s) are stretched or worn on the glasswasher chemical pumps.	Inspect and replace tube(s).
	Flow control washer in cold water solenoid valve is defective.	Contact Service Agent to repair solenoid valve.

Troubleshooting

Problem	Cause(s)	Solution(s)
Water temperature below 145°F/66°C in detergent tank.	Detergent tank thermostat tempeature setting low.	Increase thermostat setting to 145°F/66°C.
	Thermostat is defective.	Authorized Service Agent may replace thermostat.
	Detergent tank heater is defective.	Authorized Service Agent may replace detergent tank heater.
	Incoming water temperature is below 140°F/60°C.	Raise incoming water temperature to 140°F/66°C
Water leaking under glasswasher.	Pump water seal defective.	Authorized Service Agent may replace pump seal.
	Glasswasher drain line is clogged.	Clean drain line.
	Upper wash compartment drain screen is clogged.	Clean drain screen.
	Detergent tank drain screen is clogged.	Clean detergent tank drain screen.
	Building drain line is clogged.	Clean building drain line.
	Condensation is forming on the underside of wash compartment.	Open rinse water mixing valve until temperature of water is 70°F/21°C.
	Vacuum breaker at rear of glasswasher leaking.	Replace vacuum breaker.

Problem	Cause(s)	Solution(s)
Water flows into glasswasher when ON/OFF switch is in the OFF position.	FLowing water supply line pressure measured at the glasswasher exceeds 95 PSI (655 kPA).	Incoming water pressure must be 5 PSI/35 kPa on pressure gauge located on right-side of glasswasher lower compartment.
	Defective solenoid valve(s). Defective AUTO-FILL switch.	Authorized Service Agent may rebuild or replace solenoid valve(s).
	Defective AUTO-FILL SWITCH.	Service Agent may replace the switch.
Chemical(s) are not flowing into the glasswasher.	Rinse water pressure too high.	Reduce flowing water pressure measured at the glasswasher below 95 PSI (655 kPa).
	Chemical container(s) are empty. Chemical supply line(s) are	Refill the container(s).
	clogged.	Remove the supply line(s) from the chemical container(s) and flush with warm water.
	Chemical supply and/or pump tube(s) are broken.	Replace supply line(s) and/ or pump tube(s).
	No power to chemical dispensing pump(s).	Authorized Service Agent may replace chemical
	Dispensing pump is defective. Chemical pumps out of adjustment.	Authorized Service Agent must inspect and repair.
		Chemical supplier must adjust chemical pumps.
