TW STEEL

TW Steel is a watch brand harmoniously combining both design and innovation. 'The Watch in Steel' leads the oversized market with style and quality guaranteed. TW Steel values the most important relationship of all – the one with the consumer. To express this, we hereby give you all the information that you need to enjoy your TW Steel watch to the fullest.

MAINTENANCE

TW Steel uses the best materials and carries out strict controls before the watch leaves the factory. The way in which you wear or treat your TW Steel will determine whether the appearance of the watch is maintained in the future, or whether it will deteriorate. In order to enjoy wearing your TW Steel as long as possible, we include a number of tips: If the watch comes into contact with hard or corrosive materials, this can cause damage, which, if it occurs regularly, will become clearly visible in the form of scratches.

Your watch should be cleaned with a soft cotton cloth that is not impregnated with any cleaning material. Absolutely no cleaning materials should be used. It is advisable to regularly polish your watch with a soft cotton cloth. The watch is a precision mechanical instrument and should be treated as such. Adjusting the time or date, opening or closing the crown or crown cap, should not be done roughly, but carefully.

Pos. I
Position of rest
(watch running)

Pos. II
Quick-change correction
of the date

The date display comprises a 2-disc system. For construction reasons, on the first day of a new month, the date must be set on 01 via the quick-change method passing through 31–39.

The date can also be changed during the day-changing phase between approx. 10 pm and midnight. The date of the following day has to be set, because no automatic date change takes place at midnight.

- 1 Pull the crown out to position II (watch still running).
- 2 Turn the crown clockwise until the required date appears.
- 3 Push the crown back into position I.

Pos. III
Setting the time

- 1 Pull the crown out to position III (watch stopped).
- 2 Turn the crown, until the current time is displayed (remember the 24-hour cycle).
- 3 Push the crown back into position I.

CAUTION : IF THE CROWN IS NOT PRESSED IN PROPERLY, THE WATCH IS NO LONGER WATERPROOF AND THE MOVEMENT CAN BE SERIOUSLY DAMAGED!
