

Water gathering in your Ford's Workbench Tailgate Cover?

If your Ford Workbench Tailgate is holding water and corroding the electronics, LETS FIX IT!

First let's remove your current factory tailgate cover

There are 13 bolts which have a T30 Torx bit head. Remove these and pop your cover off!

Let's add some water resistance now

Next grab this seal (link below) and run it along the edges of your tailgate panel. Peel back the backing and apply the self-adhesive seal to the contours of the tailgate.

or

<https://www.mcmaster.com/93085K67/>

Note: for added sealing capabilities, pickup these sealing washers and place them under each bolt head, when reinstalling the tailgate panel. <https://www.mcmaster.com/94733A719/>

NOW, INSTALL THE [BILLIEBARS WORKBENCH TAILGATE](https://billiebars.com/products/billiebars-workbench-tailgate-cover)

Follow the instructions below to finish the install of the BillieBars Tailgate
