METAL ORE

Your expert partner

Surfina will work with you on your project offering technical advice to help solve your creative problems.

We provide free quotations and will try to answer all of your questions.

Based in South West London, we have been working with polished plaster since 1999 both in the residential and commercial sectors.

Projects include numerous domestic and commercial interiors, a renowned Kensington Hotel and an independent school.

We hold stocks of materials and for those who wish to learn more about our products, we hold training courses here in the UK and in Italy.

Iron

Copper

Rust

It produces an urban style obtained by producing a distressed metal effect.

It reproduces an oxidised patina on the surface of IRON or COPPER of rust or verdigris.

This dramatic finish is both eye-catching and practical.

It gives great character to the internal space,
giving the perception of an aged patina to the
surface.

Application

Prime: Prepare the surface by applying using a roller or brush one coat of Base R. Leave to dry of 8-12 hours.
Base coat: Apply BLACK FILLER

Finish 1: Apply one coat of METAL with an open pore sponge. Leave it to dry for 8 hours.

Finish 2: Apply IRON or COPPER with a spatter brush in an irregular manner. Smooth the surface with a damp sponge. In humid spaces e.g. bathrooms or health centres apply 2 coats of CERA NEUTRAL. To create nail head effect use the special stencil.
