

## NATURAL SANDS

Natural decorative pigments to colour CALCETERRA, PERLAGE and CASEINA

---

### Product characteristics and uses

NATURAL SANDS are ground and processed natural pigments used to colour CALCETERRA or to create shades and glazing in combination with PERLAGE and CASEINA.

### To colour CALCETERRA

The colours of CALCETERRA are obtained by adding NATURAL SANDS, available in 20 different shades, to your chosen base. NATURAL SANDS can be used singularly or mixed accordingly to the desired colour. To achieve the 60 colours of the collection, please read the code correctly.

*Code Example: CT 1 43*

*CT 1 = Base CT 1 texture COTTON*

*43= NATURAL SANDS n.43*

NATURAL SANDS are available as pre-weighed packages according to the size of the CALCETERRA tub:

CALCETERRA 1 kg → NATURAL SANDS 20 g

CALCETERRA 5 kg → NATURAL SANDS 100 g

CALCETERRA 15 kg → NATURAL SANDS 300 g

NATURAL SANDS are also available in 2kg tubs. In this case an electronic scale should be used to correctly weigh the desired quantity of NATURAL SAND to be added to each single tub of CALCETERRA.

The code can consist of two numbers groups, same or different (e.g. CT 1 43.43), in which case the desired quantity of NATURAL SANDS would double.

APPROXIMATE COVERING = 20-40 g/sqm

### To colour PERLAGE and CASEINA

The percentage of NATURAL SANDS to be added to PERLAGE and CASEINA may vary according to the desired colour intensity.

## Technical Data Sheet n° C 507.20
