

# Nature's Sun Secret

Patent Pending  
Sun "D"-fense Lotion

- Packed with plant antioxidants to stave away sun skin damage
- Non-toxic
- No white residue
- Allows the skin to produce vitamin D
- Allows minimal melanin production thereby preventing age spots

This "Sun D-fense" lotion allows you to minimally tan without burning. Tanning is a natural shield against UV radiation, which in turn reduces skin tissue damage. AMG's scientists examined how protect themselves from the sun and mimicked the process in a sun lotion—Nature's Sun Secret. This lotion is designed to prevent age spots and sagging skin associated with excessive sun tanning. Nature's Sun Secret also contains scientifically researched, plant-based ingredients proven to build collagen.

The skin is the largest organ of the body with many important functions. Sun blocking on a daily basis is not as healthy as we have been led to believe. Continual "sun blocking" diminishes the skin's ability to do one of its most important functions—produce vitamin D. Clinical research on vitamin D and its health promoting properties has truly advanced over the last 10 years.

The main purpose of sunblock and sunscreen is to prevent sunburn, which according to authorities, is connected to the cause of skin cancer. Meanwhile, the incidence of skin cancer and melanoma continue to rise.

This Sun "D"-fense lotion is 100% chemical free.

### Active Ingredients that Contain Plant SPFs:

1. **Carrot Seed Oil:** contains beta carotene antioxidant, prevents wrinkles
2. **Tamanu Oil:** prevents sunburn, anti-inflammatory, ancient cultures considered it to be "sacred"
3. **Red Raspberry Seed Oil:** naturally high in vitamins A & E, omega 3 & 6 fatty acids
4. **Shea Butter:** heals and prevents water loss from skin
5. **Coconut Oil:** anti-bacterial, anti-fungal, used as sun protection for thousands of years by indigenous Pacific Islanders

**Directions for Use:** Apply liberally over entire body before going into the sun, and after swimming, showering or sweating. Reapply liberally every hour.

### Which ingredients increase collagen production?

1. Ascorbyl Phosphate: form of vitamin C needed by the skin to increase collagen production naturally. Research shows exposure to UV light reduces type 1 collagen in the dermis layer of human skin, causing premature aging.
2. Sunflower Oil: contains vitamin C, which increases collagen production.
3. Shea Butter: restores skin elasticity.
4. Many of our plant ingredients contain additional vitamin C, plus multiple antioxidants, known to reduce wrinkles.

Post-sun tip: Do not wash your arms/legs with water or soap for 3 hours afterwards to avoid removing vitamin D and its precursors from the outer layer of the skin.

**Naturally green. Naturally clean.**

## Save Our Oceans

Chemical sunscreens are destroying our coral reefs. AMG believes in creating new products that are safe for the earth and all life forms—especially humans. Let's work together to reduce the overall chemical load.

### CORAL REEF DEGENERATION

### Nature's Sun Secret lotion is safe for:

- Children
- Pregnant women
- Those with cancer or family history of cancer or any immune deficiency
