Six Reasons to Select a High Reliability Glenair Micro-D Connector

1 Recognized performance standards.

Every element of the MIL-DTL-83513 Micro-D is exactly controlled—from terminal spacing to approved wire termination methods. The military standard defines contact resistance, dielectric withstanding voltage, corrosion resistance, shock and vibration tolerances and a wide range of other electrical, mechanical and environmental performance standards. Standardized measurement and test methodologies ensure consistent, predictable performance throughout this broad family of ruggedized, miniature connectors.

2 Proven reliability under tough operating conditions.

For applications where interconnect failure is simply not an option, the Glenair high-reliability Micro-D offers a wealth of performance benefits which far outweigh any potential cost savings realized by specifying a lesser caliber connector. If downtime is a critical concern, other connectors cannot match the long-term durability and performance advantages of the MIL-DTL-83513 Micro-D, which include:

- Higher current ratings
- Lower circuit resistance
- Superior vibration and shock
- Optimized EMI/RFI shielding
- Broader operating temperature
- Better damage resistance
- Enhanced corrosion resistance
- Better contact retention
- Better environmental sealing

3 The flexibility of easy customization.

Manufacturers of satellite communications systems, geophysical exploration devices, medical diagnostics and industrial equipment face many of the same packaging requirements for reduced size, weight and shape as do their military counterparts. And the ability to design-in a wide range of custom modifications which fit the unique packaging requirements of these specialized applications is a distinct advantage of the Glenair Micro-D —making it the connector of choice for many unique or small quantity applications.

4 Advanced, high temperature tolerance.

Heat from electrical or environmental sources can soften mated contacts over time and reduce contact retention force. Under extreme conditions of shock and vibration this loss of normal retention can result in unstable resistance across the interconnect. This is the case for all types of contacts—machined, drawn, stamped and twisted. But materials selection, fabrication and heat treating techniques enable Glenair's TwistPin contact to resist high temperature stress relaxation for up to 1000 hours at 125° C and thus perform at levels unmatched by other contact designs.

5 Trouble-free mating and un-mating.

Glenair has perfected a nickel underplating combined with a proprietary duplex gold overplating which provides optimal contact lubricity (anti-galling) and effectively eliminates the oxidation common to copper flash underplating. Glenair's advanced plating process contributes to the overall durability of the connector by reducing contact engaging and separating forces. Glenair 100 contact Micro-D connectors have been successfully tested to 25,550 mating cycles (test report ER1010) proving the durability of the Glenair plating process.

6 Fast Turnaround and Same-Day Availability.

Are the Micro-D connectors and accessories you need either in stock or able to be manufactured in a short period of time? Glenair has built its reputation on fast turnaround and can deliver TwistPin products—from discrete connectors to complete assemblies—faster than anyone else in our business. We maintain the world's largest inventory of Micro-D connectors and accessories, all available for immediate shipment with no quantity or price minimums.

Not All Micro-D Connectors Are Created Equally

The MIL-DTL-83513 and MIL-DTL-32139 specifications define the minimum acceptable performance levels for Micro-D and Nanominiature connectors. While the specs are rigid in their performance benchmarks, manufacturers are given considerable leeway when it comes to contact design, crimp fabrication, contact finish and material selection. Stamped and formed contacts, for example, are widely used in Micro-d connectors due to their low-cost and ease of manufacture. But independent testing clearly shows that TwistPin style contacts provide superior performance in such areas as high temperature tolerance, contact retention and crimp strength. If you have already made the decision to use either a Micro-D or Nano sized connector because its ruggedized performance outweighs the potential cost-savings realized in a lesser-caliber connector, then you owe it to yourself to understand the very real differences between stamped pins and the Glenair TwistPin Contact System.

Split-Tine Contact Systems

The socket contact is made by machining a copper alloy tube, then cutting a longitudinal slot. The contact is then crimped to bend the tines together. The smallest split tine contact systems are used in connectors with .075 inch spacing. The TwistPin offers improved vibration performance and higher contact density.

M39029 Split Tine Contact System

Two Reasons to Choose TwistPins

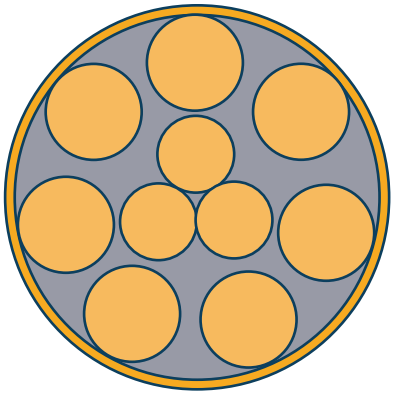
This unretouched photograph shows important differences between the TwistPin and stamped pins.

1 A Better Crimp Joint

Micro-D connectors are factory-terminated to wire. Board mount and insulated wire pigtails have crimp joints where the wire attaches to the contact. Micro-D crimp joints are concealed with epoxy potting. The Micro-D is unique among high reliability mil spec connectors because the mil spec allows stamped crimp barrels and does not specify that the crimping process must use mil spec crimp tools. The thin sheet metal in the stamped pin cannot produce a satisfactory gas-tight crimp joint, so spot welding is required to reduce the chance of failure.

2 A Stronger Front End

Both types of contacts meet the requirements of MIL-DTL-83513. But only the TwistPin offers a stronger front-end with its seven points of contact, high normal force and better resistance to vibration.



Seven Points of Electrical Contact

The TwistPin size #24 contact has seven strands of BeCu wire surrounding three filler strands . Each strand makes contact with the socket, assuring low resistance, plenty of contact wipe, and excellent shock and vibration performance.

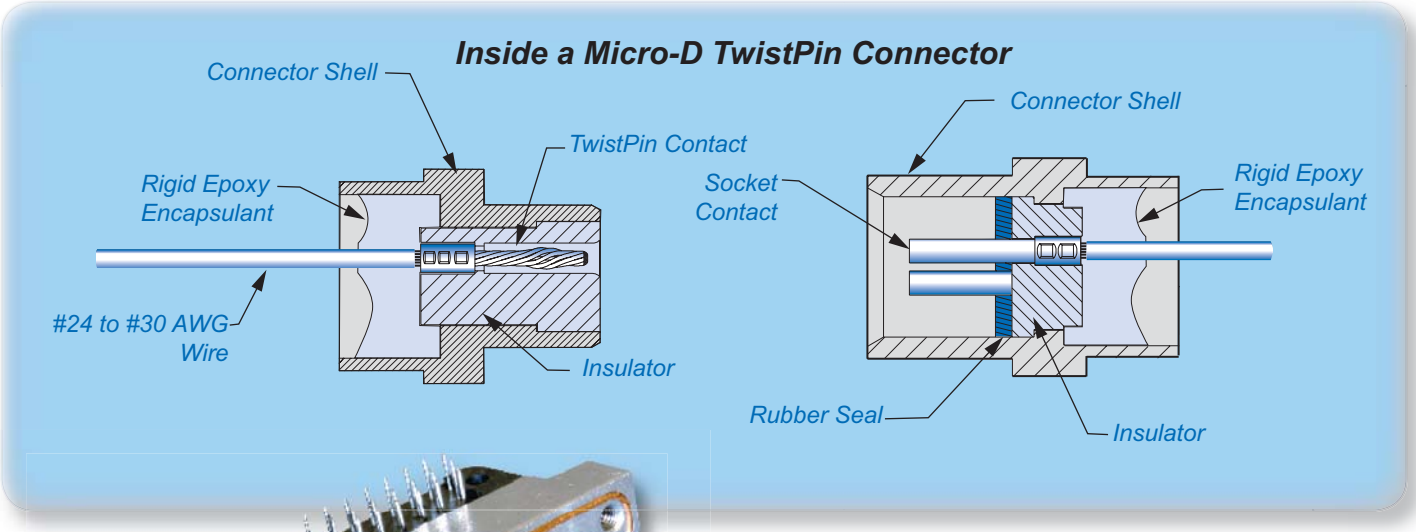
The Glenair TwistPin

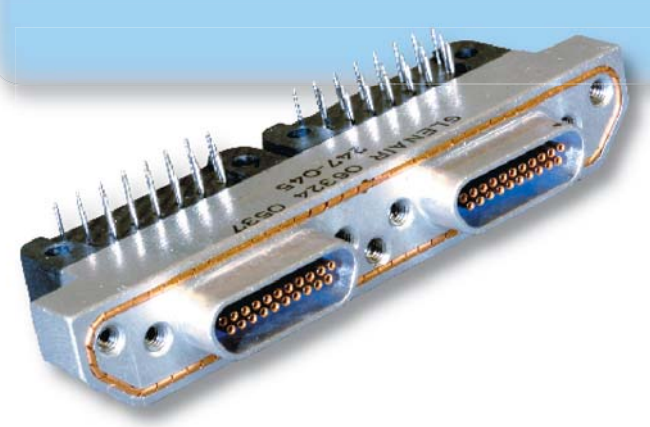
At-a-Glance

Question:
Why choose a TwistPin connector?

Answer: Design Flexibility and Reliable Performance

If reliability and performance were the only considerations in the design of a micro contact system, everyone would opt for a TwistPin contact and a machined socket and crimp sleeve. But cost and ease of manufacture are significant issues as well, which is why stamped and formed contacts, as well as split-tine M39029 contacts, are still widely used. The Glenair TwistPin Contact System provides a superior wire attachment which translates to lower contact resistance—and it does so under extreme conditions of vibration, shock and high heat. An additional key benefit of the TwistPin contact is the ease of designing a custom package to fit your exact needs. The precision machined components can be readily integrated into a wide range of connector package envelopes.





TwistPin Contacts
The TwistPin contact is made with a bundle of beryllium copper wires welded at the tip to form a semispherical radius and "bulged" to create a spring.

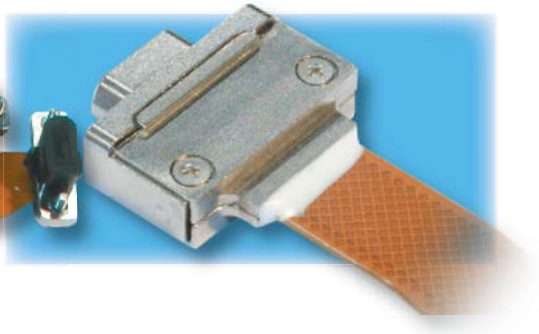
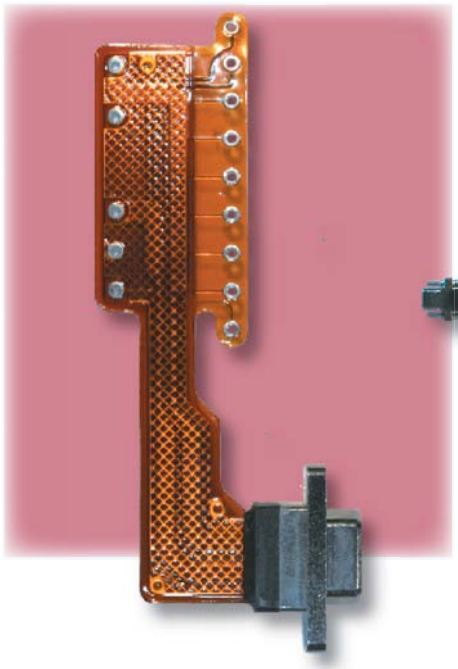
Four Reasons to Select Glenair for Your Next Micro/Nano Flex Circuit Project

1 Unsurpassed Experience in Micro/Nano Flex Circuit Production

Glenair has been integrating Micro-D and Nanominiature connectors into flex circuitry for over 30 years. Our technical capabilities include design and layout of turnkey assemblies as well as the production of custom-configured micro and nano interconnects for maximum size and weight savings.





2 Full Spectrum Product Offering

Glenair offers a complete range of miniaturized printed circuit board connectors with high-reliability TwistPin contacts. We supply both through-hole and surface mount designs in every angle and mounting style for integration into single-sided, double-sided and multilayered flex circuitry.

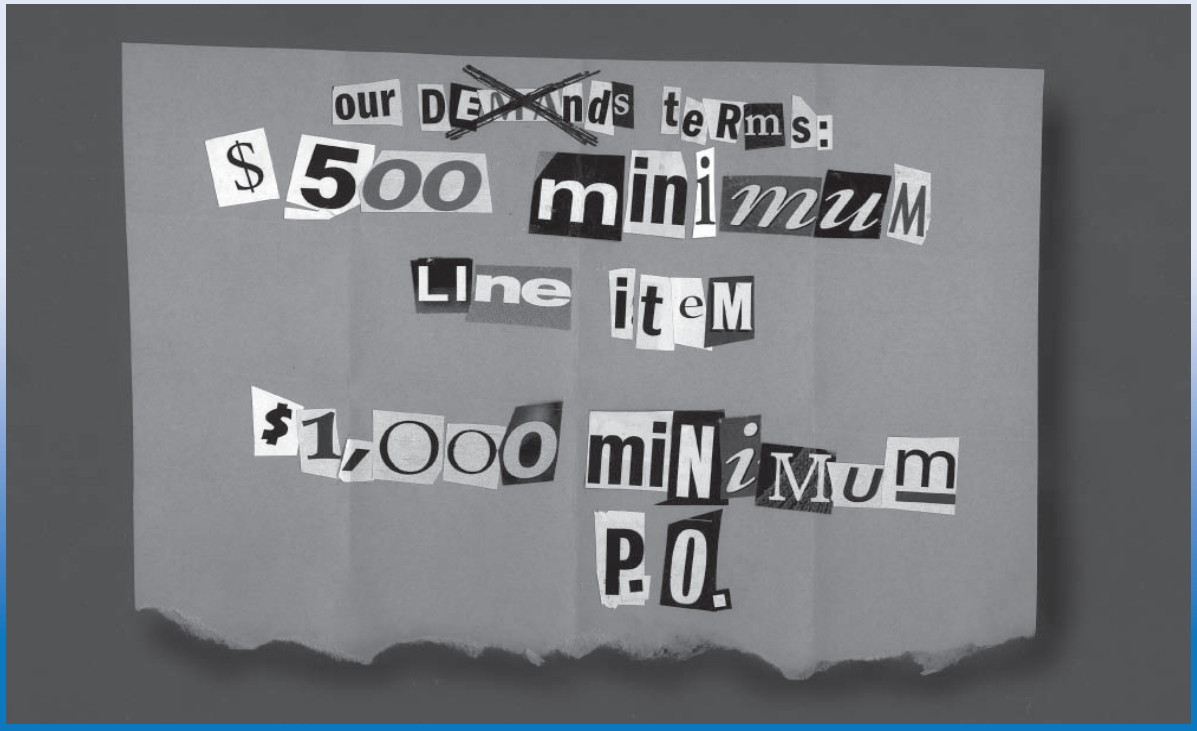
3 Application Design

Our turnkey Micro-D and Nanominiature flex circuit assemblies are produced to exacting specifications. Customer-supplied designs are reviewed and revised to insure the most advantageous utilization of EMI shielding, polarization, strain-relief and connector packaging technologies. At Glenair, the final design solution is optimized to meet the exact mechanical and electronic requirements of the application environment.

4 Termination Expertise

Glenair employs the most experienced workforce in the world—trained and qualified to produce consistently reliable circuit terminations using the most advanced techniques and technologies, including automated solder reflow systems.

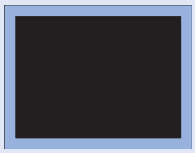
Tired of the "Highway Robbery" of minimum orders?



Then Glenair's "no minimum order" policy is the answer.

Regardless of how few you may need, Glenair is pleased to offer you no restrictions when you purchase any of the hundreds of thousands of electrical interconnect part numbers we produce. That's right: no quantity or dollar minimums.

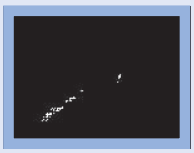
At Glenair, we've made the economy and convenience of "no minimums", and other customer-friendly policies a regular part of our business—and a big part of our strategy for keeping current with your every need.



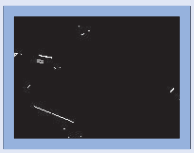
Commercial and Mil Spec connector accessories

Convoluted tubing and metal-core conduit

Electrical and fiber optic cable assemblies



Composite thermoplastic components



Microminiature connectors and accessories

Backshell assembly and termination tools

MICRO-D PERFORMANCE SPECIFICATIONS

1 **SCOPE**

1.1 **Scope**. This specification covers performance requirements for Glenair Micro-D connectors manufactured in accordance with MIL-DTL-83513F.

1.2 **Description**. MWD plastic and MWDM metal shell Micro-D connectors on .050 inch (1.27 mm) centers, with TwistPin contacts.

2 **ORDER OF PRECEDENCE**

2.1 **Order of precedence**. In the event of a conflict between the requirements of this specification and the references cited herein, this document takes precedence. The requirements set forth in customer specifications and Glenair detail drawings shall take precedence over this document.

3 **REQUIREMENTS**

3.1 **Electrical performance requirements**.

3.1.1 **Insulation resistance**. 5,000 megohms minimum between any pair of contacts and any contact and the shell when tested in accordance with EIA-364 Procedure 21, which specifies 500 volts DC.

3.1.2 **Dielectric withstanding voltage**.

3.1.2.1 **Dielectric withstanding voltage (sea level)**. 600 volts ac, rms 60 Hz. Connectors shall show no evidence of breakdown or flashover when subjected to the DWV test of EIA-364 Procedure 20.

3.1.2.2 **Dielectric withstanding voltage (70,000 feet).** 150 volts ac, rms 60 Hz. Connectors shall show no evidence of breakdown or flashover when subjected to the DWV test of EIA-364 Procedure 20.

3.1.3 **Contact resistance**

3.1.3.1 **Contact resistance (M83513 Group C qualification)**. The voltage drop of a mated pair of contacts attached to wires shall not exceed the values shown when tested in accordance with MIL-DTL-83513F Paragraph 4.5.8, using 2.5 amps test current.

Wire	Voltage Drop (mV)
M22759/11-26	65 Maximum
M22759/33-26	75 Maximum
A-A-59551 25 gage	60 Maximum

3.1.3.2 **Contact resistance (lot acceptance testing)**. The voltage drop across a mated pair of contacts shall not exceed 8 millivolts when tested in accordance with EIA-364-06, using a test current of one ampere ± 2%. If the connector under test is wired, the calculated resistance across the contacts shall not exceed 8 milliohms when the maximum specified wire resistance per foot is subtracted from the total resistance.

3.1.4 **Low signal level contact resistance**. When tested with a micro-ohmeter using a test current of 100 milliamperes maximum and 20 millivolts open circuit maximum, the resistance of a mated pair of contacts shall be 32 milliohms maximum. Test procedure shall be in accordance with EIA-364-23.

3.1.5 **Contact Current Capability**. Contacts shall be capable of carrying 3.0 amperes in continuous duty operation from -55° C. to +150° C. when tested in accordance with EIA-364-70.

MICRO-D PERFORMANCE SPECIFICATIONS

3.1.6 **Shell-To-Shell Conductivity**. A mated pair of nickel-plated metal shell Micro-D connectors fitted with an optional grounding spring on the plug shell mating face, shall not exceed 10 millivolts maximum voltage drop when tested in accordance with EIA-364-83.

3.1.7 **Shielding Effectiveness**. A mated pair of metal shell Micro-D connectors fitted with an optional grounding spring on the plug shell mating face shall meet a requirement of 65 dB minimum attenuation when tested in accordance with EIA-364-66.

3.1.8 **Magnetic Permeability**. Magnetic permeability, when tested in accordance with EIA-364-54, shall not exceed 2 mu.

3.2 **MECHANICAL REQUIREMENTS**

3.2.1 **Contact engaging and separation force**. Maximum engaging force shall be 6.0 ounces when tested in accordance with EIA-364-37, except with a .0221 ± .0001 diameter sleeve with a 6-10 microfinish. Minimum separation force shall be 0.5 ounces when tested in accordance with EIA-364-37, except with a .0230 ± .0001 diameter sleeve with a 6-10 microfinish.

3.2.2 **Connector mating and unmating force**. The maximum mating and unmating force shall not exceed a value equal to 10 ounces times the number of contacts, when tested per EIA-364-13. Mate connectors three times before initial measurements are taken.

3.2.3 **Contact Retention**. Contacts, when tested in accordance with EIA-364-29, shall withstand a 5 pound axial load for a minimum of 5 seconds, with a maximum allowable displacement of .005 inch.

3.2.4 **Crimp Tensile Strength**. Wire shall not break or pull out of crimp joints at less than the specified force when tested in accordance with EIA-364-08.

Wire	Gage	Force in Pounds
M22759/11	24	8
M22759/11	26	5
M22759/11	28	4
M22759/33	24	12
M22759/33	26	10
M22759/33	28	6

3.2.5 **Insert retention**. Inserts shall not be dislodged or moved from their original position when subjected to an axial load of 50 pounds per square inch when tested in accordance with EIA-364-35.

3.2.6 **Resistance to soldering heat.** Connectors with solder cup contacts shall not be damaged following soldering with a 360° C. solder iron for at least 4 seconds in accordance with EIA-364-56 Procedure 1. Connectors with printed circuit board terminations shall withstand immersion in a solder bath for 9-11 seconds at 260° C. when tested in accordance with EIA-364-56 Procedure 3 Test Condition B. Connectors, after cooling, shall not exhibit damage or warpage when examined at 10X magnification. .

3.2.7 **Solderability**. Solder cup and printed circuit terminals shall meet the solderability requirements of MIL-STD-202 Method 208.

3.2.8 **Durability**. Micro-D connectors shall be capable of 500 cycles of mating with no damage or degradation to electrical performance. Engaging and separation force and mating forces shall not exceed the requirements of 3.2.1 and 3.2.2.

MICRO-D PERFORMANCE SPECIFICATIONS

3.3 **ENVIRONMENTAL REQUIREMENTS**

3.3.1 **Salt spray (corrosion)**. Connectors shall show no exposure of base metal due to corrosion when subjected to the salt spray test of EIA-364-26. In addition, connectors shall meet contact resistance, low circuit level contact resistance and mating force requirements.

Shell material, finish (code)	EIA-364-26 test condition	Duration (hours)
Aluminum, cadmium plating (01)	A	96
Aluminum, electroless nickel plating (02)	B	48
Aluminum, black anodize (04)	B	48
Aluminum, chem film (06)	B	48
Aluminum, gold (05)	B	48
Stainless steel, passivated (03)	D	1000

3.3.2 **Fluid immersion**. Connectors shall meet mating force requirements following 20 hours immersion in synthetic lubricating oil and 1 hour immersion in coolanol 25, when tested in accordance with MIL-DTL-83513F paragraph 4.5.18.

3.3.3 **Thermal vacuum outgassing**. The assembled connector mass excluding metallic parts shall not exceed 1.0% total mass loss (TML) or 0.1% total volatile condensible materials (CVCM) when tested in accordance with ASTM E595. ***NOTE: the interfacial seal on metal shell MWDM receptacle connectors slightly exceeds the allowable CVCM unless it is specially processed. This is acceptable per MIL-DTL-83513 but may not be permissible for specific space programs.***

Outgassing properties of Micro-d components

Component	Material	Brand Name	% Total Mass Loss (TML)	% Collected Volatile Condensable Material (CVCM)	Test Report
Thermoplastic Insulators and PCB Trays	Liquid Crystal Polymer	Vectra® C-130	0.03	0.00	NASA Test #GSC17478
Potting Compound	Epoxy	Hysol C9-4215	0.48	0.01	Glenair Test
Interfacial Seal “as received”	Flourosilicone	(none)	0.99	0.13	Glenair Test
Interfacial Seal with Oven Bakeout 8 hrs. 400° F.	Flourosilicone	(none)	0.03	0.01	Glenair Test
Interfacial Seal with Thermal Vacuum Bakeout24 hrs. 125° C.	Flourosilicone	(none)	0.08	0.02	Glenair Test
Wire	Tefzel®	Tefzel®	0.22	0.01	NASA Test #GSC19998

3.3.4 **Thermal shock**. Unmated connectors shall withstand 5 cycles of thermal shock with a minimum temperature of -65° C. and a maximum temperature of 150° C. when tested in accordance with EIA-364-32, Condition IV. Connectors shall not exhibit any detrimental damage or degradation of electrical performance.

MICRO-D PERFORMANCE SPECIFICATIONS

3.3.5 **Humidity**

3.3.5.1 **Humidity, MWDM connectors with interfacial seals**. Wired, mated connectors shall be subjected to humidity conditioning in accordance with EIA-364-31, Test Condition IV. After a minimum of 3 hours of step 7a of the final cycle, and while the connectors are still subjected to high humidity, the insulation resistance shall be measured when the chamber temperature reaches 20° ± 5° C. Insulation resistance shall not be less than 100 megohms, and connectors shall pass a DWV test of 360 volts (rms 60 hertz ac).

3.3.5.2 **Humidity, MWD plastic connectors without interfacial seals**. Wired, mated connectors shall be subjected to humidity conditioning in accordance with EIA-364-31, Test Condition IV. On completion of step 6 of the final cycle, connectors shall be removed from the chamber, unmated and surface moisture removed. Connectors shall meet 1 megohm minimum and shall pass a DWV test of 100 volts (rms 60 hertz ac).

3.3.6 **Vibration (sine)**. Connectors, when mated, wired in series and fixtured in accordance with MIL-DTL-83513F, shall not exhibit any discontinuity longer than 1 microsecond when tested in accordance with EIA-364-28 Test Condition IV, which specifies 12 hour duration, 10 Hz to 2000 Hz, and amplitude of 20 g_n peak. Connectors shall not be damaged and no loosening of parts shall occur.

3.3.7 **Shock**. Connectors, when mated, wired in series and fixtured in accordance with MIL-DTL-83513F, shall not exhibit any discontinuity longer than 1 microsecond when tested in accordance with EIA-364-27, Test Condition E, which specifies an amplitude of 50 g peak. Connectors shall not be damaged and no loosening of parts shall occur.

3.3.8 **Marking Permanency**. Connector marking shall meet the requirements od MIL-STD-202 Method 215.

3.3.9 **Fungus resistance**. Connector materials shall meet the requirements of MIL-STD-810 Method 508.5.

100S	8.2	7.9	26.4	27.1	24.8	22.3

1. Nominal weight shown. Add 10% for maximum weight.
2. Weight is connector only. See table below for wire weight calculation.

STAINLESS STEEL MICRO-D WEIGHT ADDERS

Layout	Stainless Steel Adder in Grams
9P	1.9
9S	2.0
15P	2.4
15S	2.4
21P	2.9
21S	2.8
25P	3.2
25S	2.9
31P	3.4
31S	3.2
37P	3.6
37S	4.1
51P	4.0
51S	3.8
100P	6.3
100S	5.6

1. Nominal weight shown. Add 10% for maximum weight.
2. Weight includes 18 inches of M22759/11-26 insulated #26 AWG copper wire.

HOW TO CALCULATE WEIGHTS FOR DIFFERENT WIRE TYPES AND LENGTHS

Wire Type	Wire Gage (AWG)	Maximum Wire Weight Per Inch in Grams
M22759/11	24	.098
M22759/11	26	.072
M22759/11	28	.052
M22759/33	24	.076
M22759/33	26	.053
M22759/33	28	.034
M22759/33	30	.025

EXAMPLE CALCULATION:

MWDM2L-37P-6K7-54B (54 inches of M22759/11 #26 gage wire)

1. Find the connector weight in the "Pigtail" column above .... 4.2 g.
2. Find the wire weight in grams per inch.....072 g./in.
3. Multiply the # of conductors times length and weight
   37 wires x 54 inches x .072 g./in. =.....144 g.
4. Add the connector weight to the wire weight ..... 148.2 g.

TwistPin Connectors and RoHS Compliance

European Union Directive 2002/95/EC on Restriction of the use of certain Hazardous Substances ("RoHS") states that certain types of equipment (primarily consumer electronic products such as personal computers) shall not contain lead, mercury, cadmium, hexavalent chromium, PBB's or PBDE's. For the record, Glenair does not produce any OEM products of this type. Furthermore, our interconnect components are either free of the substances RoHS controls, or specifically intended for use in military-aerospace applications that are exempt. Makers of consumer products should refer to the following guidelines to insure Glenair interconnect components are correctly specified when used in in RoHS regulated electronic equipment.

Are Micro-D connectors RoHS compliant?

The products in this catalog can be ordered with various plating finishes. Some of these finishes such as cadmium and chem film, along with solder-dipping, do not comply with the RoHS directive.

Why doesn't Glenair eliminate non-RoHS products?

Glenair products are typically used in defense and aerospace equipment exempt from RoHS requirements. Glenair will continue to offer cadmium and chromate finishes in accordance with DoD and aerospace specifications. Our part numbers contain a broad range of plating finish ordering codes. Customers can easily specify RoHS compliant finishes if desired.

Products that do not comply with RoHS regulations:

1 Cadmium plating is available on metal shell connectors in this catalog. Note that cadmium plating does not currently comply with RoHS rules.

2 Chem film is available on metal shell connectors.This coating contains hexavalent chromium which does not currently comply with RoHS rules.

3 Tin-lead solder dipped printed circuit board tails. Board mount M83513 Micro-D's and other products are normally solder dipped in 63% tin 37% lead molton solder. RoHS compliance for consumer products requires elimination of solder coatings containing lead.

RoHS compliance made easy

1 Specify electroless nickel plating on the connector shell. Or, choose stainless steel shells for maximum corrosion protection and RoHS compliance.

2 Use Mod Code 513 on Micro-D board mount connectors. Board mount Micro-D's and other products are normally solder dipped in 63% tin 37% lead molton solder. Any solder-dipped part can be supplied with RoHS compliant gold-plating instead simply by adding Mod Code 513 as a suffix to the standard part number.

MICRO-D RoHS COMPLIANCE EXAMPLES

Part Number	Problem	Solution	RoHS Compliant Part Number
MWDM**1**L-37PSB	Plating code 1 specifies cadmium plating.	Change to electroless nickel plating (code 2).	MWDM**2**L-37PSB
MWDM2L-25SCBRP-.110	CBR style PCB connectors are solder-dipped in tin-lead.	Add Mod Code 513 to change the PC tail finish to gold plating.	MWDM2L-25SCBRP-.110-513
MWDM**6**L-9S-6K7-18L	Plating code 6 specifies chem film.	Change to electroless nickel plating (code 2).	MWDM**2**L-9S-6K7-18L
M83513/03-E07C	Cadmium plated shell and solder-dipped contacts.	Change to nickel plating and gold contacts	M83513/03-E05N

MICRO-D CONNECTOR PLATING CODES: RoHS COMPLIANCE

Micro-D Plating Code	Plating Type	RoHS Compliance	Notes
1	Cadmium with yellow chromate conversion coating over electroless nickel	No	Electroless nickel is the preferred alternate.
2	Electroless nickel	RoHS Compliant	First choice for RoHS compliance. Good corrosion resistance, excellent conductivity, M83513 approved, always in stock.
3	Stainless steel shell, passivated	RoHS Compliant	Higher cost but unsurpassed corrosion resistance, not conductive enough for typical EMI needs. Build-to-order.
4	Black anodize over aluminum	RoHS Compliant	Economical, non-reflective, non-conductive. Build-to-order.
5	Gold over aluminum	RoHS Compliant	Low volume, higher cost, excellent conductivity. Build-to-order.
6	Chem film	No	Electroless nickel is the preferred alternate.

MICRO-D BACKSHELL PLATING CODES: RoHS COMPLIANCE

Plating Code	Plating Type	RoHS Compliance	Notes
C	Black anodize	RoHS Compliant	Inexpensive, non-reflective, not suitable for EMI (poor conductivity), build-to-order.
E	Chem film	No	Electroless nickel is the preferred alternate.
J	Cadmium with yellow chromate conversion coating over electroless nickel	No	Electroless nickel is the preferred alternate.
M	Electroless nickel	RoHS Compliant	First choice for RoHS compliance. Good corrosion resistance, excellent conductivity, M83513 approved, always in stock.
NF	Cadmium with olive drab chromate conversion coating over electroless nickel	No	Electroless nickel is the preferred alternate.
Z2	Gold	RoHS Compliant	Low volume, higher cost, excellent conductivity, build-to-order.

Need something unusual in a multi-contact connector?

Then consider Glenair's expertise in high reliability connector design and development.

Glenair's line of innovative, specialty connectors has grown, year after year, to become one of the most diverse in the industry. Our application engineers have worked directly with commercial, industrial and military customers worldwide to design and build such products as quick disconnects for missile launchers, high temperature connectors for jet engines, shorting plugs to prevent accidental weapon firing, explosion-proof bulkhead feed-throughs for marine and off-shore platform use, and hermetically-sealed MIL-DTL-38999 connectors for military applications. So, for extraordinary applications, consider an extraordinary partner: Glenair.

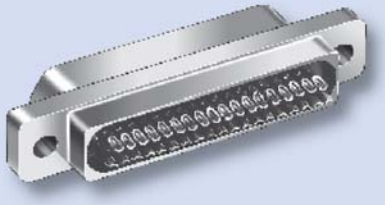
PRODUCT SELECTION GUIDE

MWDM Solder Cup Connectors
Always in stock, these connectors feature gold-plated solder cup contacts for termination to #24 through #30 AWG wire.

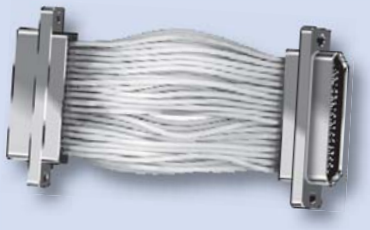


Solder Cup Page B-2

MWDM Pre-Wired Connectors
These connectors avoid the expense and workmanship issues with soldering wires. Crimp terminations assure consistent circuit resistance. Stocked in #26 AWG, available in #24 gage to #30 gage wire.

Pre-Wired Page B-4

MWDM Back-To-Back Unshielded Cables
If a simple jumper cable is required, these cable assemblies simplify ordering. No special part numbers are necessary. Available in all sizes. Wiring is #1 to #1, etc. Back-to-backs are built to order in any length.



Back-To-Back Page B-6

MWDM Shielded Cable Assemblies
Featuring special Micro-D connectors with integral shield attachment platforms and ground springs, these shielded cable assemblies are terminated, tested and ready for immediate use.

Shielded Cables Page B-8

MWDM Uninsulated Wire Pigtails
Gold plated or solder dipped single strand uninsulated wire can be used for a variety of termination techniques, including wire bonding, flexible circuits and rigid boards.

Uninsulated Wire Page B-12

GMDE Environmentally Sealed Panel Mount
GMDE connectors are special Micro-D connectors with O-rings for sealing to panels or bulkheads.

Environmental Page B-14

Micro-D Metal Shell
MWDM Solder Cup Connectors

Micro-D Solder Cup Termination–These connectors feature gold-plated TwistPin contacts for best performance. Use with #26 or smaller stranded or solid wire. Specify nickel-plated shells or cadmium plated shells for best availability.

Now Available With #24 Gage Contacts–AWG 24 wire offers increased mechanical strength and lower voltage drop. Glenair Micro-D solder cup connectors are now compatible with 24 gage stranded or solid wire. Specify "N" for 24 gage pin contacts, or "T" for 24 gage socket contacts.

Micro-D Metal Shell
MWDM Pre-Wired with Insulated Wire

Micro-D Pre-Wired Pigtails–These connectors feature gold-plated TwistPin contacts and mil spec crimp termination. Specify nickel-plated shells or cadmium plated shells for best availability. 100% tested and backpotted, ready for use.

Choose the Wire Type and Size To Fit Your Application–If on-hand availability is most important, choose #26 AWG Type K mil spec Teflon® wire. Select M22759/33 Type J for space applications.

HOW TO ORDER METAL SHELL PRE-WIRED MICRO-D CONNECTORS

Series	Shell Material and Finish	Insulator Material	Contact Layout	Contact Type	Wire Gage (AWG)	Wire Type	Wire Color	Wire Length Inches	Hardware

Micro-D Metal Shell
MWDM Pre-Wired with Insulated Wire

PERFORMANCE SPECIFICATIONS

Current Rating	3 AMP
DWV	600 VAC Sea level
Insulation Resistance	5000 Megohms Minimum
Contact Resistance	8 Milliohms Maximum
Low Level Contact Resist.	32 Milliohms Maximum
Magnetic Permeability	2 µ Maximum
Operating Temperature	-55° C. to +150° C.
Shock, Vibration	50 g., 20g.
Mating Force	(10 Ounces) X (# of Contacts)

MATERIALS AND FINISHES

Connector Shell	Aluminum Alloy 6061 or Stainless Steel, 300 Series, passivated. See Ordering Info for Plating Options
Insulator	Liquid Crystal Polymer (LCP)
Interfacial Seal	Flourosilicone Rubber, Blue
Pin Contact	Beryllium Copper Gold over Nickel Plating
Socket Contact	Copper Alloy Gold Over Nickel Plating
Hardware	300 Series Stainless Steel
Encapsulant	Epoxy Resin Hysol EE4215

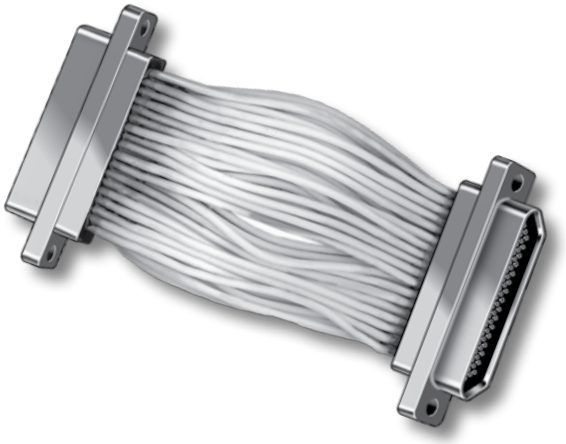
Glenair®

Micro-D Metal Shell
MWDM Back-To-Back Unshielded Cable Assemblies



Save Time and Money With Back-To-Back Cables– These Micro-D connectors feature crimp wire terminations and epoxy encapsulation. The installed cost is lower than terminating solder cup connectors.

100% Certified– all back-to-back assemblies are 100% checked for continuity, resistance, voltage and insulation resistance.

Hardware Note– if jackposts are required on one end and jackscrews on the other, use hardware designator "B" (no hardware installed), and order hardware kits separately.

HOW TO ORDER BACK-TO-BACK UNSHIELDED CABLES

Single-Ended or Double-Ended–These easy-to-order cable assemblies eliminate the need for expensive assembly labor. 100% tested and ready for use.

Now With Twisted Pairs–No need to create a procurement specification for Micro-D cables with twisted pairs. Glenair 177-740 cables are furnished with a full complement of white/blue twisted pair wires.

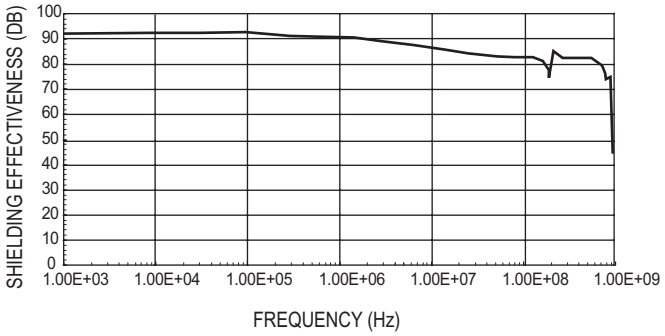
Integral Shield Termination–The connector shell has a platform to accept Band-It shield termination bands. The cable shield braid is attached directly to the connector.

Save Labor, Reduce Weight and Improve EMI Shielding with Glenair's Micro-D Shielded Cable Assemblies

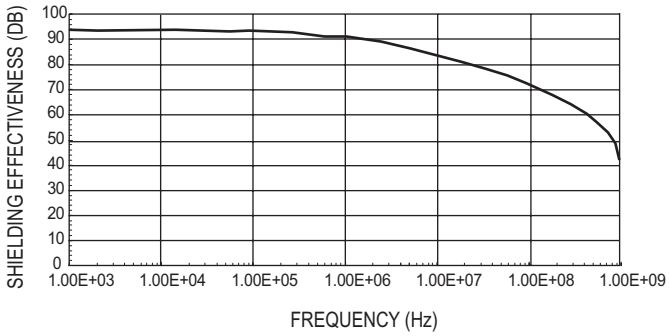
Aerospace electronics systems require higher and higher levels of protection from radiated emissions. Glenair's fully shielded Micro-D cable assemblies meet this need. The cable shield is attached directly onto the one-piece connector shell and secured with a stainless steel ***BAND-IT***® clamp. These pre-wired, 100% tested assemblies meet the requirements of MIL-DTL-83513. An optional ground spring on the pin connector assures low shell-to-shell resistance. Available with a variety of wire types and shields, Micro-D shielded assemblies can be ordered in any length, either single-ended or "back-to-back".

Ground Spring and EMI Shielding Effectiveness – A gold-plated stainless steel ground spring on the pin connector mating face offers substantial improvement in EMI protection. The graphs compare identical connectors tested with and without ground springs.

EMI Performance with Ground Spring



EMI Performance without Ground Spring



HOW TO ORDER SHIELDED MICRO-D CABLE ASSEMBLIES

177–710 – 2 – 25 P 4 K 1 – 24 M A G

Basic Number
177-710 – Untwisted Wire
177-740 – Twisted Pair Wire

Shell Plating
1 – Cadmium w/Yellow Chromate*
2 – Electroless Nickel
5 – Gold

Number of Contacts
9, **15**, **21**, **25**, **31**, **37**, **51**, **100**

Contact Type
P – Pin (Single End Plug)
S – Socket (Single End Receptacle)
GP – Double End Cable, Pin Connectors Both Ends
GS – Double End Cable, Socket connectors Both Ends
CS – Double End Cable, Pin and Socket

Wire Gage (AWG)
4 – #24 Gage
6 – #26 Gage
8 – #28 Gage
0 – #30 Gage

Wire Type
K – Teflon® Wire Per MIL-W-22759/11 (Not available in #30 gage)
J – Cross-Linked Tefzel® Wire Per MIL-W-22759/33

Wire Color
1 – White (177-710 only) Or White/Blue Pairs (177-740 Only)
5 – Color-Coded Per MIL-STD-681 (177-710 only)(#24 and #26 gage only)
White/Blue Twisted Pairs With Numbered Wire Markers (177-740 only)
7 – Ten Color Repeating (177-710 only)

Overall Length in Inches
6 Inch (152 mm.) Minimum

Mounting Hardware
B – No Mounting Hardware Installed
M – Male Jackscrew, Allen Head, Low Profile
S – Male Jackscrew, Slot Head, Low Profile
P – Female Jackpost
L – Male Jackscrew, Allen Head, Non-Removable
F – Float Mount, for Front Panel Mounting
R – Float Mount, for Rear Panel Mounting

Shield and Jacket Option
N – No Shield, No Jacket
A – Braided Shield Installed
C – Braided Shield Installed, With E-CTFE Halar “Expando” Jacket (+150° C.)
D – No Shield, With E-CTFE Halar “Expando” Jacket (+150° C.)

Ground Spring Option*
N – No Ground Spring
G – Ground Spring Installed (Pin Connectors Only)

***Ground Spring cannot be used with Cadmium Plating**

MWDM Micro-D Shielded Cable Assemblies
177-710 (Untwisted) and 177-740 (Twisted Pairs)

PERFORMANCE SPECIFICATIONS

Current Rating	3 AMP
Dielectric Withstanding Voltage	600 VAC Sea Level 150 VAC 70,000 Feet
Insulation Resistance	5000 Megohms Minimum
Contact Resistance	8 Milliohms Maximum
Low Level Contact Resistance	32 Milliohms Maximum
Magnetic Permeability	2 µ Maximum
Operating Temperature	-55° C. to +150° C.
Shock	50 g.
Vibration	20 g.
Outgassing	Meets NASA Outgassing Requirements
Mating Force	(10 Ounces) X (# of Contacts)
EMI Shielding Effectiveness	50 dB Attenuation, 100 MHz to 1000 MHz

For additional performance requirements, please refer to MIL-DTL-83513

Micro-D Metal Shell
MWDM Uninsulated Wire Pigtails

Micro-D Uninsulated Pigtails–These connectors feature gold-plated TwistPin contacts and mil spec crimp termination to gold-plated single strand copper wire. Suitable for soldering or splicing applications, the wire leads can be ordered either gold-plated or solder-dipped.

New One-Piece Socket Contact–An "integral tail" socket contact is now standard on all socket connectors ordered with up to one inch of wire. This phos bronze contact eliminates the crimp joint and offers greater rigidity.

Micro-D Metal Shell
GMDE Environmentally Sealed Panel Mount With O-Ring

RMI

RMI Style

Blind tapped mounting holes with stainless steel inserts accomodate either #4-40 or M3 mounting screws. Connectors are supplied with jackposts installed. Socket connectors feature integral jackposts.

CMI

CMI Style

Space-saving design uses rear panel mount jackposts to attach connectors to the panel.

Choose the Style That Meets Your Needs– ***RMI*** version features blind tapped mounting holes, allowing secure installation on panels. ***CMI*** version saves space by using rear panel jackposts to attach the connector.

Mates to Standard M83513 Connectors– GMDE connectors meet the requirements of MIL-DTL-83513 and feature TwistPin contacts for best performance.

Meets MIL-STD-810 Immersion– The nitrile O-ring and a special epoxy wire sealing process allow GMDE connectors to meet immersion requirements.

Protect Your Equipment with Ruggedized Micro-D Connectors

Tactical communications boxes must be sealed to prevent water ingress. Standard M83513 type Micro connectors can be difficult to seal to a bulkhead. The flange is too narrow for a gasket, and sealing with RTV can be time-consuming and messy. The Glenair GMDE connector with O-rings provide a better way to seal the connector.

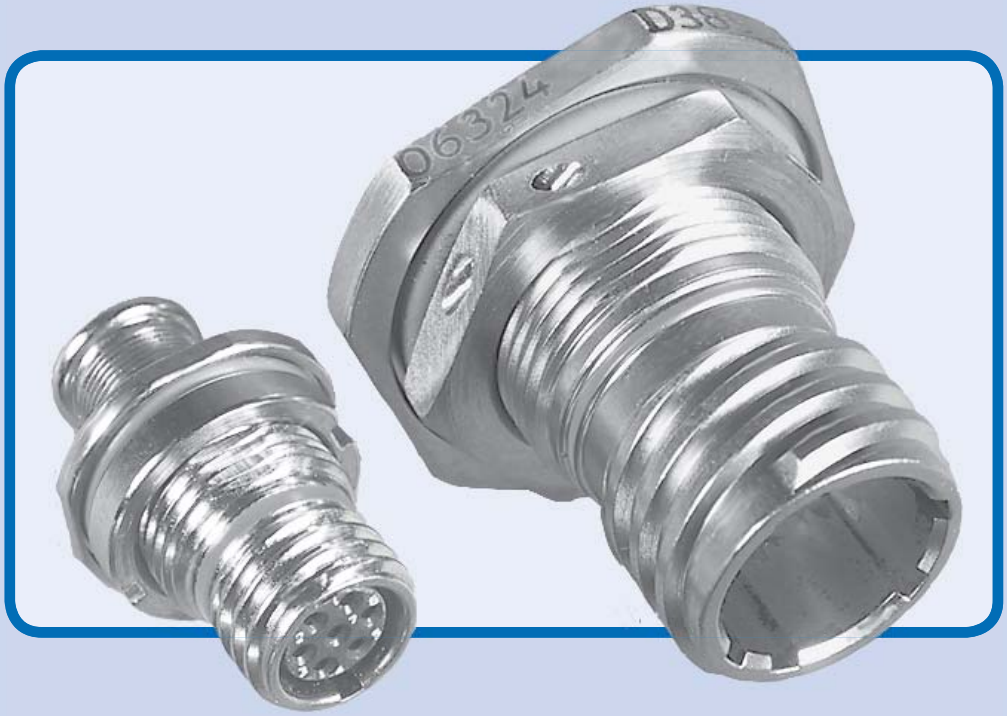
What's Less than Half the Size and Weight of a D38999 Connector?



The Glenair Series 80 "Mighty Mouse"

Nothing tells the "Mighty Mouse" story better than the above picture. If your goal is to maintain the performance standards of the D38999 but to reduce the size and weight of the overall interconnect system, than the Series 80 "Mighty Mouse" is the answer. The "Mighty Mouse" offers up to 71% weight savings when compared to aluminum versions of the D38999 Series III. Compared to composite D38999's the savings top out at 64%. Size reduction is equally dramatic. And the Series 80 "Mighty Mouse" accomodates the same range of wire sizes as the D38999 and matches the product on critical performance requirements such as vibration and shock. Not bad for a COTS connector. Not bad for a mouse

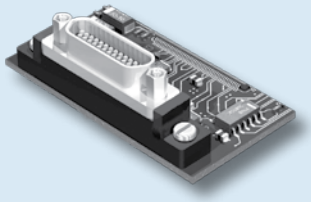
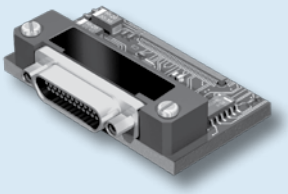
PRODUCT SELECTION GUIDE

MWDM .100" Pitch Thru-Hole Printed Circuit Board

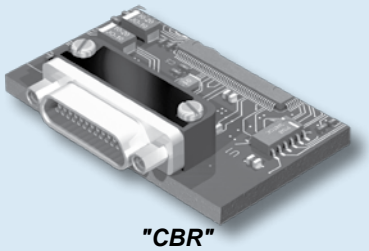
Always in stock, these industry-standard PCB connectors feature 63/37 SnPb solder-dipped .020" diameter tails in eight lengths.



"BS" Vertical
Page C-10



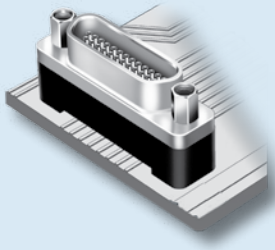
"BR" 90°
Page C-6



"CBR"
Compact 90°
Page C-2

MWDM .100" X .075" Compact Vertical Mount

A recent addition to the M83513 spec, these connectors save real estate on the circuit board and are also intended for use on flexible circuits.

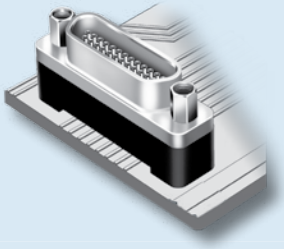


"CBS"
Vertical Mount
Page C-14

GMR75 .075" X .075" Pitch Thru-Hole PCB

These connectors save size and weight compared to .100" pitch connectors. Available with two standard tail lengths plus a staggered tail version, these connectors also have a full range of mounting hardware options and shell plating options.

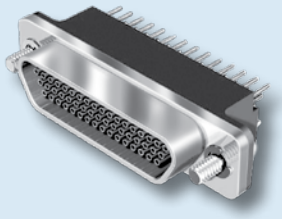
MR7590
Page C-28



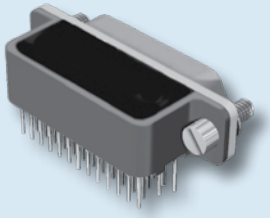
MR7580
Page C-20

GMR75C .075" X .075" Pitch Compact

Designed for flexible circuits, these connectors are modified versions of the GMR75 series. The flange thickness is .100" maximum, allowing installation of standard jackscrews.



MR7580C
Page C-24



MR7590C
Page C-32

MWDM Surface Mount Right Angle

These connectors feature .025 inch (0.64 mm.) terminal spacing. The integral metal mounting legs provide a ground path. A molded alignment strip ensures accurate terminal registration.

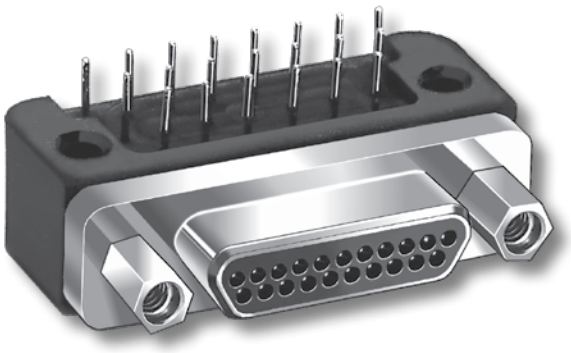
Glenair®

Micro-D Metal Shell Printed Circuit Board Connectors
CBR Style Right Angle Thru-Hole



High Performance – These connectors feature gold-plated TwistPin contacts for best performance. PC tails are .020 inch diameter. Specify nickel-plated shells or cadmium plated shells for best availability.

Solder-Dipped – Terminals are coated with SN63/Pb37 tin-lead solder for best solderability. Optional gold-plated terminals are available for RoHS compliance.

Front Panel or Rear Mountable – Can be installed through panels up to .125 inch thick. Specify rear panel mount jackposts.

HOW TO ORDER CBR STYLE PCB MICRO-D CONNECTORS

Series	Shell Material and Finish	Insulator Material	Contact Layout	Contact Type	Termination Type	Jackpost Option	Threaded Insert Option	Terminal Length In Inches	Gold-Plated Terminal Mod Code

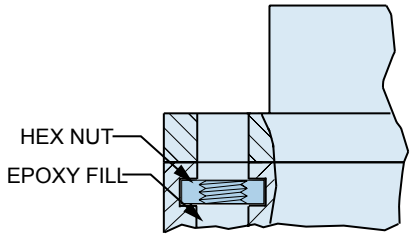
MICRO-D JACKPOST OPTIONS

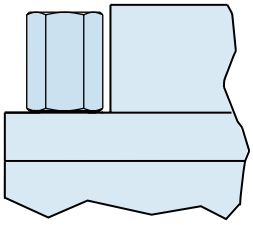
No Designator



Thru-Hole

For use with Glenair jackposts only. Order hardware separately. Install with threadlocking compound.

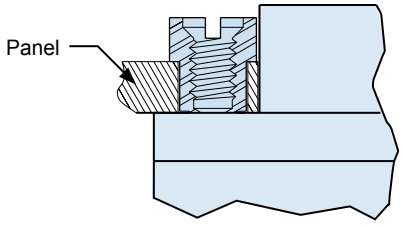
P



Standard Jackpost

Factory installed, not intended for removal.

R1 Thru R5



Jackpost for Rear Panel Mounting

Shipped loosely installed. Install with permanent threadlocking compound.

Micro-D Metal Shell Printed Circuit Board Connectors
CBR Style Right Angle Thru-Hole

PERFORMANCE SPECIFICATIONS

Current Rating	3 AMP
DWV	600 VAC Sea level
Insulation Resistance	5000 Megohms Minimum
Contact Resistance	8 Milliohms Maximum
Low Level Contact Resist.	32 Milliohms Maximum
Magnetic Permeability	2 µ Maximum
Operating Temperature	-55° C. to +150° C.
Shock, Vibration	50 g., 20g.
Mating Force	(10 Ounces) X (# of Contacts)

MATERIALS AND FINISHES

Connector Shell	Aluminum Alloy 6061 or Stainless Steel, 300 Series, passivated. See Ordering Info for Plating Options
Insulator, Tray	Liquid Crystal Polymer (LCP)
Interfacial Seal	Flourosilicone Rubber, Blue
Pin Contact	Beryllium Copper Gold over Nickel Plating
Socket Contact	Copper Alloy Gold Over Nickel Plating
PCB Terminals	Gold Plated Copper Alloy, Solder Dipped
Hardware	300 Series Stainless Steel
Encapsulant	Epoxy Resin Hysol EE4215

Micro-D Metal Shell Printed Circuit Board Connectors
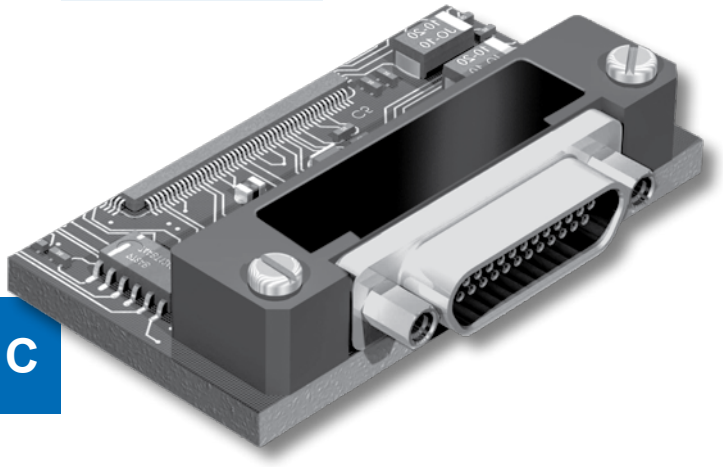
BR Style Right Angle Thru-Hole



High Performance–These connectors feature gold-plated TwistPin contacts for best performance. PC tails are .020 inch diameter. Specify nickel-plated shells or cadmium plated shells for best availability.

Solder-Dipped–Terminals are coated with SN63/Pb37 tin-lead solder for best solderability. Optional gold-plated terminals are available for RoHS compliance.

Front Panel or Rear Mountable–Can be installed through panels up to .125 inch thick. Specify rear panel mount jackposts.

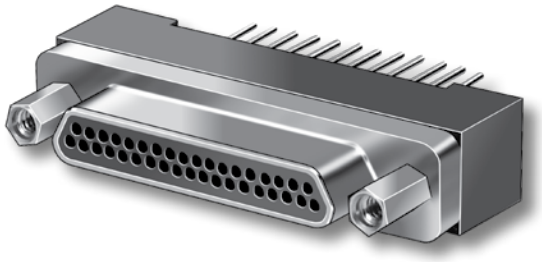
Micro-D Printed Circuit Board Connectors
Condensed Board Straight CBS .075 Inch Spacing



Save Space On Your Circuit Board–These Micro-D connectors feature .075 inch row spacing. The board footprint is reduced to match the size of the connector body.

Designed for Flex Circuits–CBS COTS connectors are available with jackscrews for flex circuit compatibility.

Solder-Dipped–Terminals are coated with SN63/Pb37 tin-lead solder for best solderability. Optional gold-plated terminals are available for RoHS compliance.

High Performance–These connectors meet the demanding requirements of MIL-DTL-83513. Suitable for Level 1 NASA reliability.

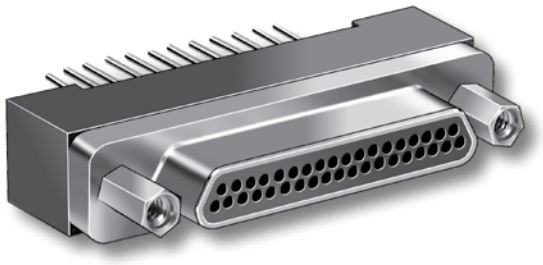
GMR7580 Vertical Mount Micro-D Connectors



Save Space On Your Circuit Board – These Micro-D connectors feature .075 X .075 inch terminal spacing. Glenair's GMR7580 offers significant size and weight savings compared to traditional .100" pitch connectors.

High Performance – Approved for British Standard BS9000, GMR7580 connectors meet the performance requirements of MIL-DTL-83513. Gold-plated TwistPin contacts assure best performance.

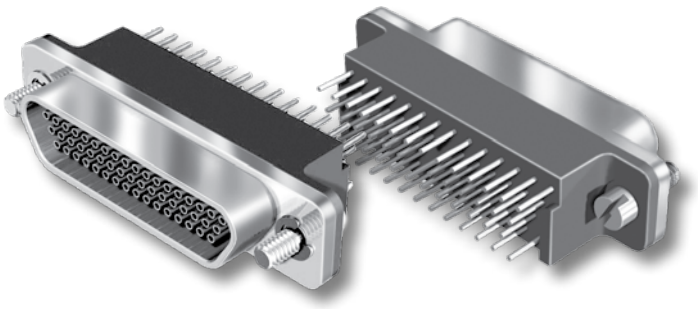
Glenair®

GMR7580C Vertical Mount Micro-D Connectors Compact Flange



Innovative Design for Flex Circuits – These Micro-D connectors answer the need for a compact flex circuit connector. Featuring .075 X .075 inch row spacing. Glenair's GMR7580C accepts standard jackscrews and jackposts, making it ideal for flex-to-board applications.

High Performance – Approved for British Standard BS9000, GMR7580C connectors meet the performance requirements of MIL-DTL-83513. Gold-plated TwistPin contacts assure best electrical and mechanical performance.

GMR7590 Right Angle Micro-D Connectors

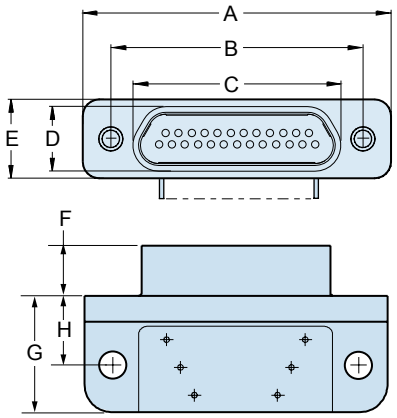
PERFORMANCE SPECIFICATIONS

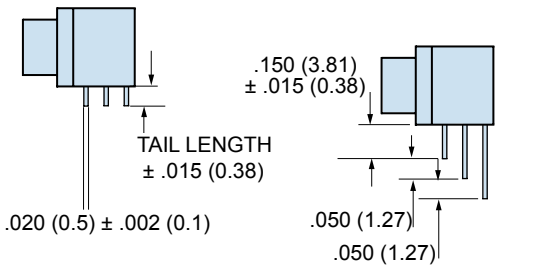
Current Rating	3 AMP
DWV	600 VAC Sea level
Insulation Resistance	5000 Megohms Minimum
Contact Resistance	8 Milliohms Maximum
Low Level Contact Resist.	32 Milliohms Maximum
Magnetic Permeability	2 µ Maximum
Operating Temperature	-55° C. to +150° C.
Shock, Vibration	50 g., 20g.
Mating Force	(10 Ounces) X (# of Contacts)

MATERIALS AND FINISHES

Connector Shell	Aluminum Alloy 6061 or Stainless Steel, 300 Series, passivated. See Ordering Info for Plating Options
Insulator, Tray	Liquid Crystal Polymer (LCP)
Interfacial Seal	Flourosilicone Rubber, Blue
Pin Contact	Beryllium Copper Gold over Nickel Plating
Socket Contact	Copper Alloy Gold Over Nickel Plating
PCB Terminals	Gold Plated Copper Alloy, Solder Dipped
Hardware	300 Series Stainless Steel
Encapsulant	Epoxy Resin Hysol EE4215



SIZES 9 THRU 51 MOUNTING HOLE IS .088/094 (2.24/2.39)
SIZE 100 MOUNTING HOLE IS .145/.150 (3.68/3.81)



STAGGERED LEADS

SIZES 9 THRU 51 THREAD SIZE IS #2-56 UNC OR M2.
SIZE 100 THREAD SIZE IS #4-40 OR M3.

GMR7590C Right Angle Mount Micro-D Connectors Compact Flange

Innovative Design for Flex Circuits – These Micro-D connectors answer the need for a compact flex circuit connector. Featuring .075 X .075 inch row spacing. Glenair's GMR7590C accepts standard jackscrews and jackposts, making it ideal for flex-to-board applications.

High Performance – Approved for British Standard BS9000, GMR7590C connectors meet the performance requirements of MIL-DTL-83513. Gold plated TwistPin contacts assure best electrical and mechanical performance.

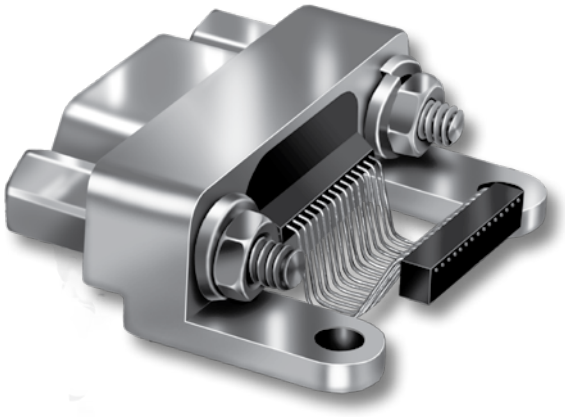
MWDM Surface Mount Right Angle Micro-D Connectors



Surface Mount Micro-D – These connectors feature .025 inch terminal spacing and an alignment strip for accurate registration. The integral mounting legs provide a ground path.

9 To 51 Contacts – These compact connectors are lighter and smaller than comparable thru-hole versions.

Mil Spec Reliability – Suitable for mission-critical requirements, These high performance connectors meet the requirements of MIL-DTL-83513.

Too Fat to Fly?

"Phenomenal Performance; Itty-Bitty Package"

Maybe. But Not Too Big To Be Saved by a Mouse.

One of the biggest challenges facing designers of armored vehicles and other rapid deployment combat platforms is the requirement to build systems which are transportable by air. In critical weight-reduction applications such as these, literally every ounce counts. That's why Glenair invented the Series 80 "Mighty Mouse;" an ultraminiature connector with all the performance characteristics of standard Mil-Spec products. The "Mighty Mouse" is being used in ground, air and sea applications where extreme levels of weight reduction are not just an option but a necessity. So, if your system is too fat to fly, consider a switch to the mouse. The Glenair "Mighty Mouse": Phenomenal Performance, Itty-Bitty Package.

PRODUCT SELECTION GUIDE

Connector height is a priority for miniaturized electronics modules. These GMSM connectors are shorter and occupy less board real estate than comparable two row Micro-D connectors.

Solder Cup, Pre-wired and PCB Versions feature gold-plated TwistPin contacts, machined aluminum shells, and are fully potted with epoxy. The glass-filled thermoplastic LCP trays will withstand soldering heat without damage.

Eight Contact Arrangements – Choose from four to 35 contacts. Available in a variety of finishes, the socket connectors are fitted with flourosilicone interfacial seals.

D

GMSM Solder Cup Connectors

Nonremovable solder cup contacts for termination to #26 AWG or smaller wire, .050" contact spacing, eight layouts from 4 to 35 contacts.

Solder Cup Connectors Page D-2

GMSM Pre-Wired Pigtails

Crimp contacts are terminated to insulated Teflon® wire. Connectors are backpotted with epoxy, providing strain relief and environmental protection.

Insulated Wire Pigtails Page D-3

GMSM with Solid Uninsulated Wire

Gold-plated or solder-dipped solid copper wire, crimp termination, backpotted with epoxy. Can be terminated to flexible circuits.

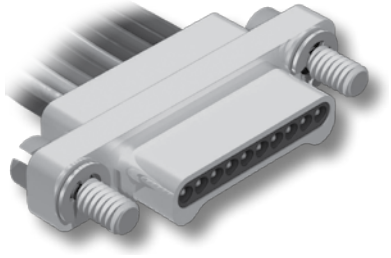
Solid Wire Pigtails Page D-3

GMSM RIght Angle Printed Circuit Board

.075 inch by .100 inch terminal spacing, for thru-hole rigid or flexible circuits. One piece threaded inserts provide a ground path from the jackpost to the board.

Right Angle PCB Page D-5

GMSM Low Profile Single Row Metal Shell Microminiature Solder Cup and Pre-Wired Connectors



GMSM Connectors offer mil spec design and performance in a smaller form factor. These GMSM single row connectors are reduced in height compared to two-row Micro-D connectors.

GMSM Connectors feature gold plated TwistPin contacts, machined aluminum shells, and are fully potted with epoxy. Choose from 4 to 35 contacts. Available in a variety of finishes, socket connectors are fitted with flourosilicone interfacial seals.

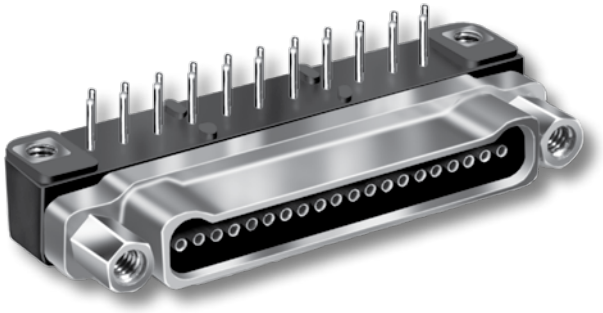
GMSM Low Profile Single Row Metal Shell Microminiature Right Angle Printed Circuit Board Connectors



Low Profile GMSM Single Row Micro Connectors offer mil spec design and performance in a smaller form factor for space savings. These GMSM connectors are shorter and occupy less board real estate than comparable two row Micro-D connectors.

GMSM Connectors feature gold-plated TwistPin contacts, machined aluminum shells, and are fully potted with epoxy. Choose from 4 to 35 contacts. Available in a variety of finishes, socket connectors are fitted with flourosilicone interfacial seals.

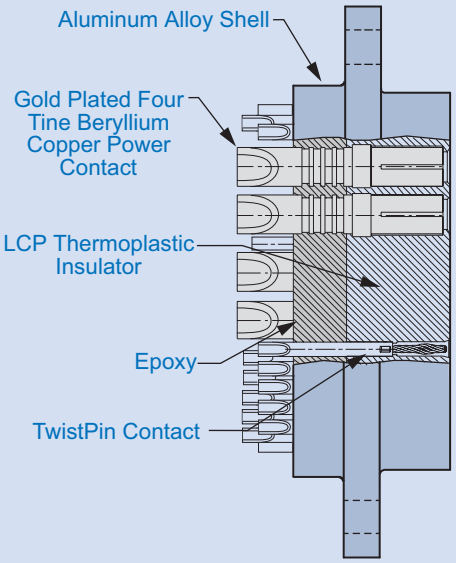
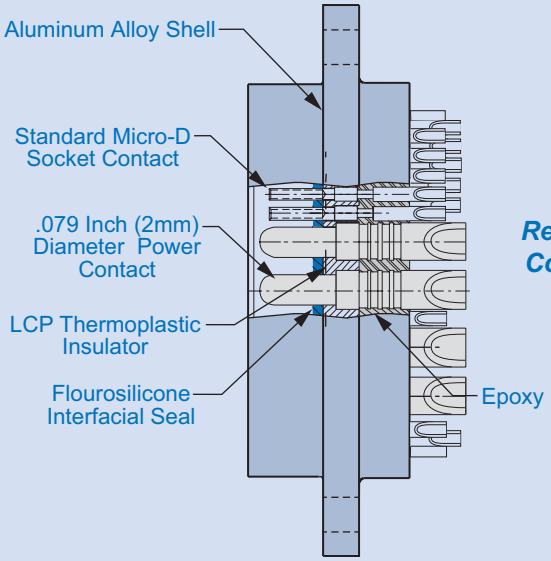
OVERVIEW AND PRODUCT SELECTION GUIDE



Plug Connector



Receptacle Connector

Glenair's Combo Micro-D's combine the size and weight advantages of a Micro -D connector with the added ability to handle higher power needs. These connectors feature combinations of .079 inch (2mm) power contacts and TwistPin signal contacts.

13 Amp Current Rating – Available in three styles: solder cup, pre-wired pigtails or printed circuit board, these Micro-D connectors handle up to #16 AWG wire.

Combo Micro-D Solder Cup Connectors

Nonremovable solder cup #16 power contacts for termination to #16 AWG or smaller wire. Micro pins accept #26 AWG or smaller wire. Gold plated contacts are backfilled with rigid epoxy.

Combo Solder Cup Page E-3

Combo Micro-D Pre-Wired Pigtails

Crimp contacts are terminated to insulated Teflon® wire. Connectors are backpotted with epoxy, providing strain relief and environmental protection.

Combo Pre-Wired Page E-6

Combo Micro-D Printed Circuit Board

Ideal for flexible or rigid circuits, these vertical mount connectors feature high temperature materials to withstand soldering heat. A full range of hardware options is available.

Combo Solder Cup Micro-D For High Power Applications

13 Amp Current Rating – Combo Micro-D's combine the size and weight advantages of a Micro -D connector with the added ability to handle higher power needs.

Solder Cup Contacts – Gold plated beryllium copper power contacts accommodate up to #16 AWG stranded wire. Signal contacts accept up to #26 AWG wire.

Mil Spec Performance – Glenair combo Micro-D connectors comply with the requirements of MIL-DTL-83513 and feature excellent resistance to high temperatures, shock and vibration.

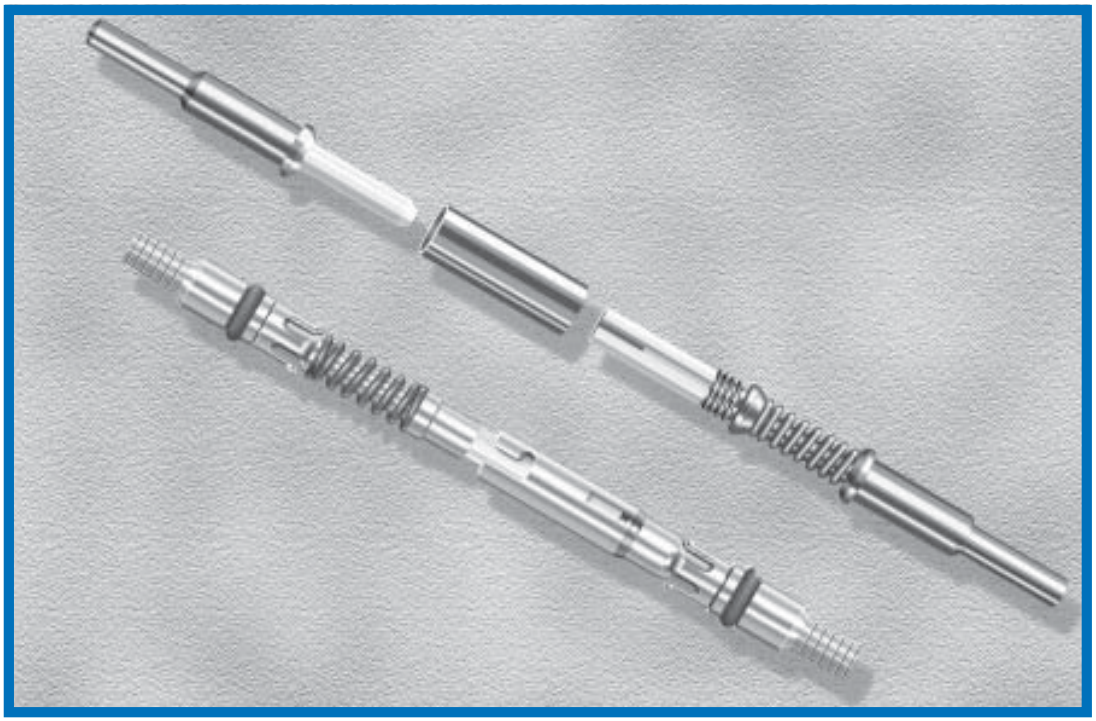
Good Things Come In Small Packages



And at Glenair, They Ship the Same Day

Tired of long lead times for F/O connectors and contacts? Then consider the Glenair difference: We've placed our products in stock, in quantity, and ready for immediate shipment—including both our MIL-T-29504 qualified pin and socket contacts as well as our new front-release 181-011 and 181-012 designs. Consider as well Glenair's "no minimum order" policy and our lightning fast turnaround on quotes for price and delivery. At Glenair, we're committed to keeping our products and services current with your every need.

PRODUCT SELECTION GUIDE

Filter With Solder Cup Contacts

Available in 9,15, 21, 25, 31, and 37 contacts, these aluminum shell filtered Micro-D connectors are backfilled with thermally conductive epoxy to allow soldering without heat damage to sensitive filter elements.

Solder Cup Filter
Page F-5

Pre-Wired Pigtail Filter Connector

These pre-wired connectors save labor and provide added reliability. Choose from 9 to 37 contacts. Mates to standard M83513 type Micro-D connectors.

Pre-Wired Filter
Page F-7

F

Vertical Printed Circuit Board Micro-D Filter

Featuring a one piece aluminum shell, these thru-hole board mount connectors can be ordered with jackposts or with jackscrews for flex-to-board applications. PC terminals are .018" (0.46 mm.) diameter and are spaced .050" (1.27 mm.) apart.

Vertical PCB Filter
Page F-11

90° Printed Circuit Board Micro-D Filter

These right angle thru-hole headers replicate the popular "CBR" .100" by .100" terminal spacing. Filter elements are housed in a wider shell. A molded rear tray withstands soldering heat and is impervoius to chemicals. Terminals are encapsulated in epoxy.

Right Angle
PCB Filter
Page F-15

In-Line Filter Adapter

Avoid costly redesign with pin/socket feed-thru adapters. These adapters plug into any standard M83513 connector. Simply unplug your existing cable, install the filter adapter and reconnect the cable.

Feed-Thru Adapter
Page F-9

Micro-D Filter Connectors
General Information

ABOUT MICRO-D FILTER CONNECTORS

Glenair Filter Micro-D connectors are low-pass filters, transmitting DC and low frequency signals while attenuating unwanted high frequency noise. These connectors are available with ***C*** filter elements or ***Pi*** filters. The filter substrates are constructed with a ceramic planar capacitor array.

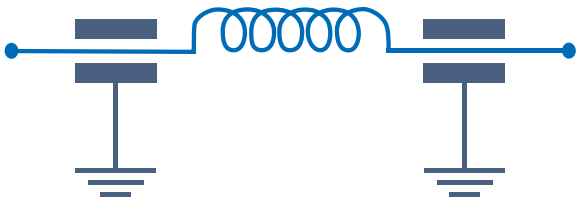
Glenair Filter Micro-D's meet the demanding performance requirements of MIL-DTL-83513, except for a reduction in the dielectric withstanding voltage rating to 200 volts DC (higher voltages available on request). The TwistPin contact system assures superior performance in the most demanding applications.

C Filter

Single capacitor with low self inductance. This configuration is generally used to attenuate high frequency signals. The simple design allows high-frequency EMI to discharge to ground via the surrounding electromagnetic field. C filters occupy the least amount of space and offer lower cost compared to other filter types.

Pi Filter

Dual capacitors with a ferrite inductor positioned between them. The Pi filter provides excellent high-frequency performance due to its sharper rolloff.



MICRO-D C FILTER ATTENUATION AND CAPACITANCE VALUES

C Filter

SPECIAL PRODUCT INFORMATION

Innovative Designs to Meet Every Need

Sometimes a standard part just won't do. For these situations Glenair welcomes your custom requirements. Whatever the need, we can propose a solution and back it up with rapid design and prototyping.

Glenair's Filtered Solder Cup Micro-D's provide EMI solutions in a miniaturized M83513 type connector. These connectors feature ceramic capacitor planar arrays and ferrite inductors. Solder cups accept #26 thru #30 AWG wire, or specify oversize contacts for #24 gage wire.

Choose Pi or C Filter Arrays in seven filter classes and six layouts. Glenair filtered Micro-D connectors comply with applicable MIL-DTL-83513 requirements and are 100% intermateable with standard connectors.

Choose 9 to 37 Contacts, with standard cadmium or nickel plating on the connector housing or choose optional finishes such as gold or chem film.

Micro-D Filter Connectors
Pre-Wired Pigtails with Insulated Wire

Glenair's Filtered Pigtail Micro-D's provide EMI solutions in a miniaturized M83513 Micro-D connector. These connectors feature ceramic capacitor planar arrays and ferrite inductors. Insulated wire is factory precision-crimped to TwistPin contacts for superior reliability in the most demanding environments.

Choose Pi or C Filter Arrays in seven filter classes and six layouts. Glenair filtered Micro-D connectors comply with applicable MIL-DTL-83513 requirements and are 100% intermateable with standard connectors.

Choose 9 to 37 Contacts, with standard cadmium or nickel plating on the connector housing or choose optional finishes such as gold or chem film.

Micro-D Filter Connectors
Pin-Socket In-Line Filter Adapters

Avoid Costly Redesign with Micro-D Filter Adapters. Upgrade your existing cables and boxes to meet EMI requirements. These pin-socket adapters can be plugged into any standard M83513 connectors. Simply unplug your existing cable, install the filter adapter, and plug the cable into the adapter.

In-Line Filter Adapters feature gold plated TwistPin contacts, machined aluminum shells, and either Pi or C filter elements. These environmentally sealed adapters are designed to meet the requirements of MIL-DTL-83513.

Micro-D Filter Connectors
Vertical Printed Circuit Board

Printed Circuit Board Micro-D Filter Connectors. These vertical mount PCB connectors are ideal for flexible circuit or motherboard applications.

Key Features include gold plated TwistPin contacts, machined aluminum shells, and either Pi or C filter elements. These environmentally sealed connectors are designed to meet the requirements of MIL-DTL-83513.

Integral Board Standoffs and Pre-Tinned Tails—These connectors are solder dipped (63/37 SnPb) and feature a full complement of mounting hardware options.

Micro-D Filter Connectors
Right Angle Printed Circuit Board

Right Angle Board Mount Filtered Micro-D's. These connectors feature low-pass EMI filtering in a right angle header for PCB termination.

Key Features include gold plated TwistPin contacts, machined aluminum shells, and either Pi or C filter elements. These environmentally sealed connectors are designed to meet the requirements of MIL-DTL-83513.

.100" x .100" Board Spacing – These connectors are similar to "CBR" style Micro-D's and share the same board footprint, allowing retrofit to existing boards.

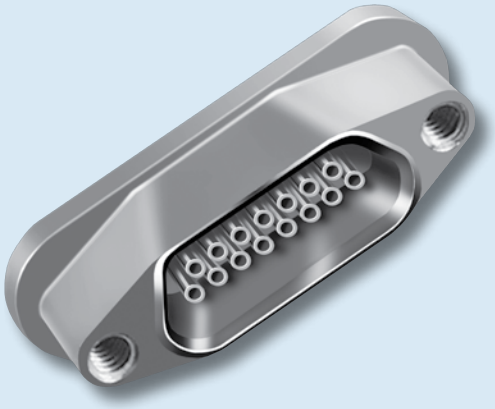
PRODUCT SELECTION GUIDE



Glenair's Hermetic Micro-D Connectors feature fused glass insulators to provide an airtight seal. These connectors are 100% tested to meet a maximum leak rate of 1 X 10^{-8} cc's per second of helium.

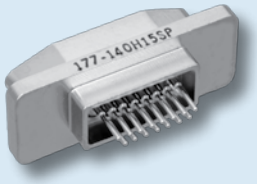
Matched Kovar® Seal – The shells and contacts are machined from Kovar®, an iron-nickel-cobalt alloy which forms a chemical bond with the vitreous glass insulator. The contacts are gold-plated and the shell is nickel-plated.

Choose Solder Cup, PC Tails or Pre-Wired in two styles: panel mount for welding, soldering or brazing, or o-ring mount.

MWDM Weldmount/Soldermount Hermetic

These Kovar® alloy connectors are available in three styles: solder cup contacts, PC tail contacts or pre-wired and epoxy-sealed. Socket contacts are Kovar® alloy with gold plating. These connectors can be front- or rear-panel mounted. Installation requires soldering, brazing or welding to the bulkhead. Helium leak rate is 1 X 10^{-9} cc's per second.

Weld Mount Hermetic Solder Cup Contacts Page G-5



Weld Mount Hermetic PC Tail Contacts Page G-5

MWDM Hermetic for Rear-Panel Mounting

Avoid the expense of soldering or welding with this o-ring version. Blind tapped mounting holes and integral jackposts provide easy installation. Three termination options are available: solder cup contacts for #26 AWG or smaller wire, PC tails for rigid or flexible circuit boards, or pre-wired with extended epoxy encapsulation to protect and insulate the solder joints.

O-Ring Hermetic Page G-7

Micro-D Hermetic Connectors
General Information

MICRO-D HERMETIC CONNECTORS

Hermeticity is defined as "the state or condition of being airtight". Sophisticated military electronics enclosures can experience electrical failure from ingress of moisture. System engineers can design the enclosure to withstand exposure to moisture and condensation by using "moisture-hardened" components and conformal coatings, but often the most practical approach is to install hermetically sealed electrical I/O connectors. Glass-to-metal seals provide assurance that, over the life of the enclosure, the accumulated amount of water vapor inside the box will not exceed the amount necessary to form condensation. Other applications for Micro-D hermetic connectors include vacuum chambers, cryogenics, and enclosures filled with inert gas.

Kovar® Alloy

Glenair's hermetic Micro-D shells and contacts are made from a special alloy called Kovar®, an iron-nickel-cobalt alloy consisting of 54% Fe, 29% Ni, and 17% Co. This alloy is covered by SAE specification AMS-I-23011. Kovar has a relatively low coefficient of thermal expansion.

Micro-D Hermetic Plating Options

Unlike regular connectors which are plated as components prior to assembly, hermetic connectors are electroplated after the parts are fired and cleaned of oxides. Typically the contacts are gold-plated and the connector shell is nickel-plated.

Matched Glass-To-Metal Seals

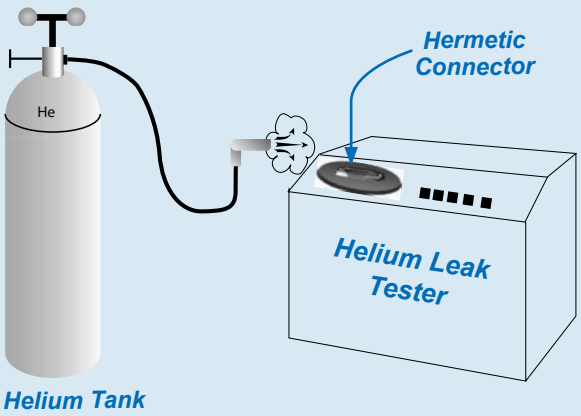
Matched seals rely on a chemical bond between the metal and the glass. Kovar contacts and shells are first exposed to high temperatures in order to develop an oxide coating. Then, the borosilicate glass and metal components are assembled with fixtures and are fused in a firing furnace at 900° C. A strong chemical bond is created between the metal and glass. Unlike compression seals which rely on different thermal coefficients of expansion between the glass and metal, a matched seal offers better resistance to stress from thermal extremes.

Connector Installation

Hermetic connectors are typically soldered or welded into panels or bulkheads. Laser welding is a good option if the connector is mounted onto a Kovar or stainless steel panel. If the panel is aluminum alloy, then soldering is recommended. Micro-D's with o-ring seals offer another alternative. O-rings, when installed properly, will provide a very low permeability seal. The seating surface must be free from scratches or imperfections. A 32 finish is acceptable, but a 16 finish is preferred. The o-ring can be coated with a light coat of vacuum grease.

Hermetic Testing

All Micro-D hermetic connectors are 100% tested prior to shipment. A helium leak test is performed to certify the hermetic seal. This test is conducted by inducing a 1 ATM vacuum on one side of the connector. Helium gas is released on the other side, and a mass spectrometer "counts" the number of helium molecules that penetrate the connector seal. Helium leak testing takes advantage of the small size of a helium molecule compared to air or water vapor. Helium is inert, rare in our atmosphere, and is easy to detect with a mass spectrometer.



MICRO-D HERMETIC CONNECTOR DESIGN NOTES

"Why can't I get a hermetic Micro-D with pin contacts instead of sockets?"

The Micro-D TwistPin contact cannot be made from the materials that are required for hermetic contacts. Hermetic contacts are made from ferrous alloys such as Kovar® or Alloy 52. These alloys do not have spring properties. The Micro-D TwistPin contact is made from spring-temper beryllium copper. The Micro-D socket contact is a cylinder and does not provide any spring force, so Micro-D hermetic connectors are always receptacle connectors with socket contacts.

"What about high pressure?" "What is the maximum recommended pressure rating for a hermetic Micro-D?"

Glenair hermetic Micro-D's are built to safely withstand 1000 PSI of hydrostatic pressure in an open face (unmated) condition.

Micro-D Hermetic Connectors
General Information

MATERIALS AND FINISHES

Connector Shell	Kovar® Alloy in Accordance With SAE AMS-I-23011 Class 1, Plated with Electrodeposited Nickel In Accordance With SAE-AMS-QQ-N-290 Class 2, 0.0002-0.0003 Inches Thick.
Insulator	Borosilicate Glass
Interfacial Seal	Flourosilicone Rubber, Blue
Socket Contact	Kovar® Alloy in Accordance With SAE AMS-I-23011 Class 1, Gold Plated In Accordance With ASTM B 488 Type II, Class 1.27 (50 microinches minimum) over Nickel Underplate in Accordance With SAE-AMS-QQ-N-290 Class 2.
Hardware	300 Series Stainless Steel
O-Ring	Flourosilicone Rubber, Blue
Encapsulant	Epoxy

PERFORMANCE SPECIFICATIONS

Current Rating	3 AMP
Dielectric Withstanding Voltage	150 VAC
Working Voltage	100 VDC
Insulation Resistance	5000 Megohms Minimum
Contact Resistance	30 Milliohms Maximum
Hermeticity	Maximum Helium Leak Rate 1 X 10^{-8} cc's per Second at One Atmosphere
Operating Temperature	-55° C. to +125° C.
Shock	50 g.
Vibration	20 g.
Outgassing	Meets NASA Outgassing Requirements
Mating Force	(10 Ounces) X (# of Contacts)
For additional performance requirements, please refer to MIL-DTL-83513	

CONNECTOR WEIGHTS FOR 177-140H HERMETIC SOLDER MOUNT

Micro-D Hermetic Connectors
Solder Mount 177-140H and 177-704H

Solder, Braze or Weld these 177-140 hermetic Micro-D connectors. Featuring a matched glass-to-metal seal, these socket receptacles are designed for panel mounting.

Kovar® Shells and Contacts comply with applicable MIL-DTL-83513 requirements and are 100% intermateable with standard connectors.

Choose 9 to 37 Contacts, with gold-plated contacts and nickel-plated shells. These connectors feature integral female jackposts.

Four Reasons to Add Glenair to Your Short List of Suppliers:

First and foremost you need availability.

Are the products and components you need either in stock or able to be manufactured in a short period of time? Glenair has built its reputation on fast turnaround. We maintain the world's largest inventory of connector accessories and deliver faster turnaround on quotes and orders than anyone else in our business. Today, Glenair is changing the way the interconnect industry operates: from a long lead-time, custom order problem, to a fast response, in-stock solution.

Second, you need capacity.

Can the supplier respond to your evolving requirements with the factory capacity and labor necessary to meet every demand—from one piece to one hundred thousand? Glenair has built the largest capacity, broadest capability factory in the interconnect accessory industry. We have the knowledge, experience and equipment necessary to handle any production requirement, no matter how large or complex, and the manpower to tackle even the most aggressive production schedules.

Third, you need convenience in ordering.

Do your current suppliers insist on quantity or dollar minimums whenever you place an order? Are their products available only from distributors with limited product knowledge and equally limited shelf stock? Is it hard to get samples when and where you need them? If your answer to any of these questions is yes, we encourage you to consider Glenair, where complete convenience in ordering—your convenience, not ours— has been a guiding principle since 1956.

Finally, you need top quality products backed by outstanding technical support.

At Glenair, we've made product quality and worldwide technical support a major part of our approach to earning your trust and loyalty—and we've been doing so since 1956. We've established an unsurpassed sales, support and engineering presence in every major market in the world, and we've designed quality into every product we ship.

In every respect, our formula for serving our filter connector customers is identical to the "best-value" service model we've relied on to maintain our leadership position in our core, connector accessory business:

- ***Same-Day Delivery on Our Most Popular Part Numbers***
- ***Lightning-Fast Turnaround on Quotes for Price and Delivery***
- ***No Price or Quantity Minimums***
- ***Outstanding Application Engineering and Worldwide Technical Support***

MICRO-D MOD CODE LIST

Mod 474 Keying Option

Specially modified shells feature keys and keyways for up to five keying positions. Compatible with standard hardware and backshells.

Page H-2

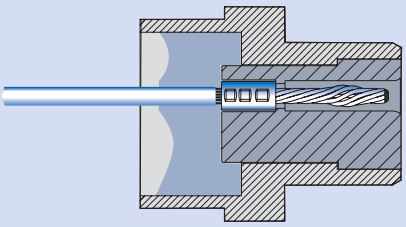
Mod 497 Ground Spring

Improve EMI shielding with plug connector ground springs. These gold-plated springs offer lower shell-to-shell resistance and are compatible with standard mating receptacles.

Page H-4

Mod 428 for 200° C. Continuous Temperature

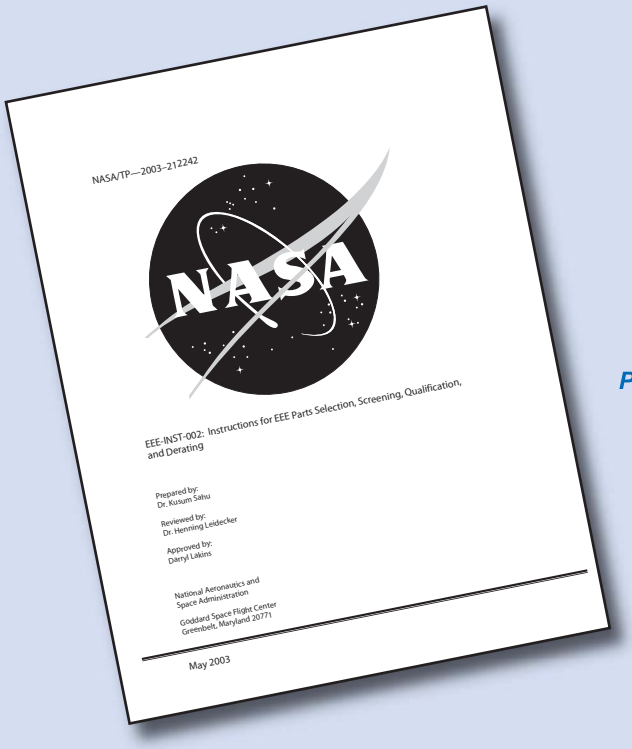
Standard Micro-D connectors are rated for 150° C. maximum continuous temperature. Mod 428 changes the potting compound to provide a 200° C. rating.



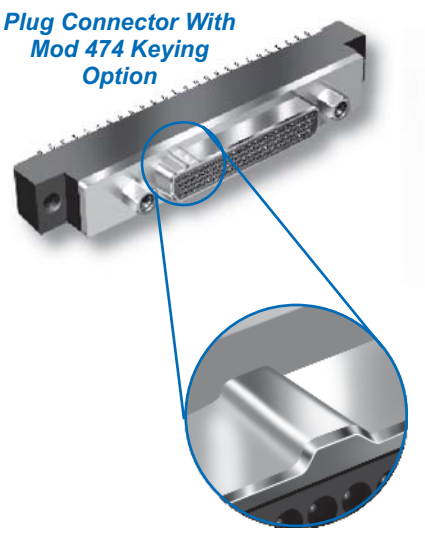
Page H-5

Mod 429 Space Grade Micro-D

Save time and cost with the Mod 429 solution. Specify special NASA requirements without the expense of having to create special procurement documentation. This section also contains valuable information on Micro-D's for space applications.



Page H-6



Plug Connector With Mod 474 Keying Option

Prevent Mis-Mating with Mod 474 Keying Option

Keyed Micro-D connectors for “fail-safe” circuits feature specially modified shells to prevent mis-mating. The plug shell has a raised key, and the receptacle shell has a keyway.

The nine pin connector accommodates three key positions. All other sizes have five positions available. The letter code following Mod 474 specifies the key position. “474A” plugs mate to “474A” receptacles.

Keyed plugs will not mate to unkeyed receptacles, but keyed receptacles will plug into standard unkeyed plugs.

HOW TO ORDER MICRO-D CONNECTORS WITH MOD 474

Step 1: Find a Standard Micro-D Part Number

Mod 474 keying is available on all standard metal shell Micro-D connectors, including solder cup, pre-wired and printed circuit board versions. This feature is not available on plastic Micro-D or M83513 connectors.

Example: MWDM2L-51PCBRP-.110

Step 2: Pick a Keying Position

A letter code identifies the key position. The table on the following page shows the keying options for each shell size. Mod 474A plugs mate to 474A receptacles, and so on.

Example: 474*B*

Step 3: Add the Mod Code to the Part Number

A letter code identifies the key position. The table on the following page shows the keying options for each shell size. Mod 474A plugs mate to 474A receptacles, and so on.

Example: MWDM2L-51PCBRP-.110-474*B*

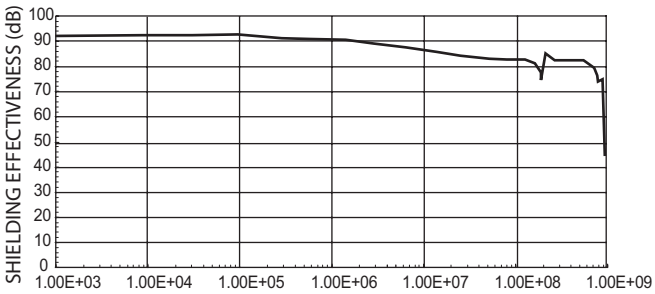
H

Improve EMI Performance with Mod 497 Ground Springs

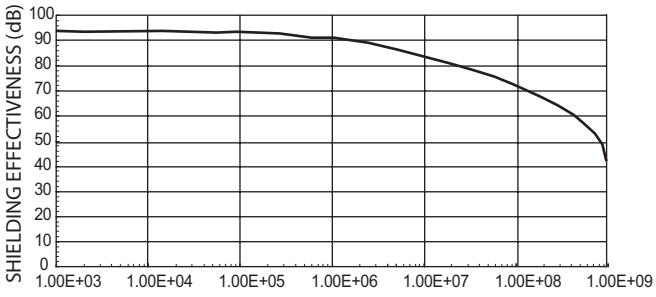
Today's military and aerospace electronics systems require improved EMI protection. Micro-D connectors are widely used in EMI applications; however, the shell-to-shell resistance of a mated pair can vary, resulting in inconsistent levels of shielding effectiveness. Ground springs assure consistent shell-to-shell resistance for improved EMI protection.

Ground Spring and EMI Shielding Effectiveness – A gold-plated stainless steel ground spring on the pin connector mating face offers substantial improvement in EMI protection. The graphs compare identical connectors tested with and without ground springs.

EMI Performance with Ground Spring



EMI Performance without Ground Spring



HOW TO ORDER MICRO-D CONNECTORS WITH MOD 497 SPRINGS

Step 1: Find a Standard Micro-D Part Number

Ground springs are available on all standard Micro-D plug connectors with solder cups, insulated wire, or printed circuit board. Ground spring usage is limited to pin connectors with electroless-nickel plated shells.

Example: MWDM2L-100P-6K7-18B

1. Plugs only (pin connectors)
2. Nickel-plated aluminum shells only

Step 2: Add the Mod Code to the Part Number

Example: MWDM2L-100P-6K7-18B-*497*

CAGE Code 06324/0CA77

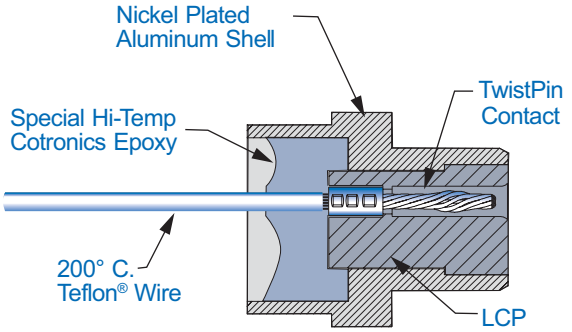
Potting a Micro-D with Epoxy-Filled Syringe

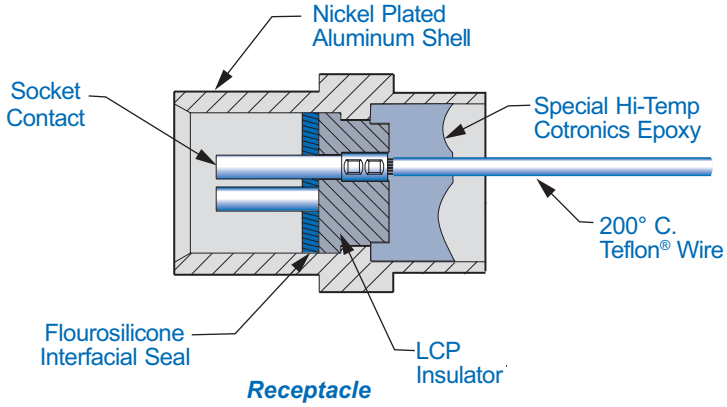
Upgrade to 400° Fahrenheit with Mod 428 High Temperature Epoxy

The search for oil and gas has led to deeper reservoirs where extreme temperatures and pressures test the limits of electronics design. Oil well logging instruments must be able to withstand temperatures beyond the limits of standard connectors.

Micro-D connectors are made from temperature-resistant materials. The Liquid Crystal Polymer (LCP) glass-filled thermoplastic insulators easily withstand 400° F. The flourosilicone seals, TwistPin contacts and aluminum shells also are rated for continuous exposure to 400° F. The epoxy potting compound is the only component not rated for high temperature. Mod 428 replaces the standard epoxy with a special 600° F. epoxy made by Cotronics, a leader in high temperature epoxies and ceramics.



Plug



Receptacle

H

HOW TO ORDER MICRO-D CONNECTORS WITH MOD 428 HI TEMP

Step 1: Find a Standard Micro-D part Number

Mod 428 is available on all standard metal shell Micro-D connectors, including solder cup, pre-wired and printed circuit board versions. Not available on plastic Micro-D or M83513 connectors.

Example: MWDM2L-37PSL

1. Metal shell only
2. Nickel-plated aluminum or stainless steel shells only.

Step 2: Add the Mod Code to the Part Number

Example: MWDM2L-37PSL-*428*

APPLICATION NOTES

1. Shell Material & Finish:	Electroless nickel plated aluminum is commonly used for high temperature connectors. Cadmium plated aluminum is not recommended for temperatures exceeding 175° C. because of discoloration and breakdown of the chromate seal applied to the cadmium. Stainless steel shells provide the best resistance to temperature and corrosive environments, but at the expense of weight and cost.
2. Epoxy:	Cotronics 600° F. Catalog #4460.

Detail of the Atmospheric Infrared Sounder Instrument (AIRS) with Glenair Micro-D Cables and Connectors

Six things you should know about Micro-D connectors for space flight

1 **Outgassing**: What is outgassing, why is it important, and how does it affect connector selection? Is special processing required to meet outgassing requirements?

2 **Screening**: What is NASA screening and what level of screening is required?

3 **Magnetic permeability**: Are nonmagnetic connectors required?

4 **Cryogenic exposure**: Are Micro-D connectors suitable for -200° C. exposure?

5 **Materials**: Micro-D connectors offer a variety of materials and plating finishes. Which ones are recommended for space flight?

6 **Wire Corrosion**: M22759/33 irradiated Tefzel® wire is preferred for space applications. What about corrosion problems caused by this wire?

Save Time and Cost with Mod 429 Space Grade Micro-D's

Micro-D TwistPin connectors are a good choice for all types of orbital and deep space projects. Glenair's Mod 429 upgrades Micro-D's to NASA requirements without the need for a customer Statement of Work or Specification Control Drawing. This section explains Glenair Mod 429 ordering, and provides valuable information on outgassing and other space flight topics.

HOW TO ORDER SPACE GRADE MICRO-D'S

Step 1: Find a Standard Micro-D Part Number

Electroless nickel plated shells and Tefzel® wire are preferred for space flight. Cadmium plating is prohibited.

Step 2: Select a NASA Screening Level

The term "Screening Level" refers to the final inspection procedure.
Level 1 for mission-critical highest reliability
Level 2 for high reliability
Level 3 for standard reliability

Step 3: Outgassing Processing

A detailed explanation of outgassing is on the following pages. The interfacial seal on Micro-D receptacles does not meet NASA outgassing requirements unless it is baked or thermal vacuum outgassed. Some customers specify deleting the seal, some opt for a bakeout, and some customers specify thermal vacuum outgassing. Both the bakeout and thermal vacuum outgassing are extra cost.

Step 4: Select the Mod 429 Code that Matches the Desired Level of Screening and Outgassing

Use the following table to choose the right modification code. Add the mod code to the connector part number. Example: MWDM2L-37P-6J5-18L-***429C***

NASA Screening Level	Special Screening Only		Special Screening Plus Outgassing Processing	
	Interfacial Seal is Installed	Interfacial Seal is Deleted	8 Hour Oven Bake 400° F.	Thermal Vacuum Outgassing 24 hrs. 125° C.
Level 1 Highest Reliability	Mod 429B	Mod 429F	Mod 429J	Mod 429C
Level 2 High Reliability	Mod 429	Mod 429D	Mod 429K	Mod 429A
Level 3 Standard Reliability	(Use standard part number)	Mod 432	Mod 186	Mod 186M

1 Outgassing: What is outgassing and how does it affect connector selection? Is special processing required to meet outgassing requirements?

What is outgassing?

Plastic and rubber materials give off gaseous molecules. For example, the smell inside a new car is caused by polymer outgassing. Heat and vacuum increase the rate of diffusion. In a spacecraft the gases coming off polymers can contaminate optical surfaces and instruments. The result is degraded performance.

How is outgassing measured?

The space industry has adopted a standardized test procedure, ***ASTM E 595***, to evaluate out-gassing properties of polymers. Small samples of material are heated to 125° C. at a vacuum of 5 X 10^{-5} torr for 24 hours. Then the sample is weighed to calculate the ***Total Mass Loss*** (TML). The TML cannot exceed 1.00% of the total initial mass. During the test, outgassed matter condenses on a cooled collector plate. The quantity of outgassed matter is caluclated to determine the ***Collected Volatile Condensable Material*** (CVCM). The CVCM cannot exceed 0.10% of the original specimen mass.

MIL-DTL-83513 specifies that Micro-D connectors must meet outgassing requirements, but the interfacial seal exceeds the limit. How can this be?

The mil spec allows the TML and CVCM to be calculated based on the total mass of the nonmetallic components. The interfacial seal can exceed outgassing limits as long as the insulator and potting compound are well below maximum outgassing limits.

Is special outgassing necessary?

It depends on the customer. Some programs specify that all connectors be oven baked or thermal vacuum outgassed. For example, NASA GSFC programs typically require that the interfacial seals are deleted,along with level I screening and thermal vacuum outgassing processing.

Why pay extra for bakeout or thermal vacuum outgassing?

If the interfacial seal is not removed, NASA recommends a bakeout process. Table 1 demonstrates that a simple oven bake is sufficient to reduce volatile matter. The choice is up to the customer. Whatever level of processing, the Glenair mod 429 codes make ordering easy.

Outgassing At-a-Glance

1 Flourosilicone Interfacial Seals exceed NASA outgassing limits.

2 NASA recommends removing the seal or performing a bakeout.

3 An inexpensive oven bakeout has better results than the more costly thermal vacuum outgassing.

4 Glenair Mod 429 codes provide an easy ordering solution, whatever the outgassing option.

H

TABLE 1: OUTGASSING PROPERTIES OF MICRO-D CONNECTORS

Component	Material	Brand Name	% Total Mass Loss (TML)	% Collected Volatile Condensable Material (CVCM)	Test Report
Thermoplastic Insulators and PCB Trays	Liquid Crystal Polymer	Vectra® C-130	0.03	0.00	NASA Test #GSC17478
Potting Compound	Epoxy	Hysol C9-4215	0.48	0.01	Glenair Test
Interfacial Seal “as received”	Flourosilicone	(none)	0.99	0.13	Glenair Test

Wire	Tefzel®	Tefzel®	0.22	0.01	NASA Test #GSC19998

2 Screening: What is NASA screening and what level of screening is required?

What is NASA screening?

NASA specification EEE-INST-002 provides instructions on selecting, screening and qualifying parts for use on NASA GSFC space flight projects. Table 2C in the NASA spec contains specific inspection instructions for MIL-DTL-83513 connectors. These screening requirements exceed the standard mil spec inspection levels.

What screening level is required?

NASA defines three levels of screening: level 1 for highest reliability, level 2 for high reliability, and level 3 for standard reliability. Level 3 equates to standard M83513 Group A and B lot acceptance testing, and levels 1 and 2 call for additional testing.

Why does Glenair perform extra screening tests?

Glenair has test procedures that go beyond the letter of the NASA spec. Meeting NASA requirements means not only inspecting per EEE-INST-002, but also building parts in accordance with NASA Technical Standard NASA-STD-8739.4 “Crimping, Interconnecting Cables, Harnesses, and Wiring”. Glenair fully meets these requirements and has obtained NASA certification. Our extra inspection steps reflect the fact that pre-wired connectors not only require best practices on the assembly floor, but also require thorough final electrical and mechanical testing.

What about qualification requirements?

Qualification is not required if the manufacturer has performed qualification testing per MIL-DTL-83513. Qualification by similarity is usually invoked for those Micro-D’s not specifically covered by the mil spec.

Figure 1: Excerpt from NASA EEE-INST-002

Due to the dynamic nature of this document, users are advised to check the http://nepp.nasa.gov website prior to every usage to obtain the latest document revision.

1.0 PURPOSE

The purpose of this document is to establish baseline criteria for selection, screening, qualification, and derating of EEE parts for use on NASA GSFC space flight projects. This document shall provide a mechanism to assure that appropriate parts are used in the fabrication of space hardware that will meet mission reliability objectives within budget constraints.

2.0 SCOPE

This document provides instructions for meeting three reliability levels of EEE parts requirements (see 6.0) based on mission needs. The terms “grade” and “level” are considered synonymous; i.e., a grade 1 part is consistent with reliability level 1. Levels of part reliability confidence decrease by reliability level, with level 1 being the highest reliability and level 3 the lowest. A reliability level 1 part has the highest level of manufacturing control and testing per military or DSCC specifications. Level 2 parts have reduced manufacturing control and testing. Level 3 Parts have no guaranteed reliability controls in the manufacturing process and no standardized testing requirements. The reliability of level 3 parts can vary significantly with each manufacturer, part type and LDC due to unreported and frequent changes in design, construction and materials.

GSFC projects and contractors shall incorporate this guideline into their Project EEE Parts Program.

3.0 DEFINITIONS

Screening. Screening tests are intended to remove nonconforming parts (parts with random defects that are likely to result in early failures, known as infant mortality) from an otherwise acceptable lot and thus increase confidence in the reliability of the parts selected for use.

TABLE 2: NASA SCREENING REQUIREMENTS

Inspection/ Test	NASA Level 1	NASA Level 2	Glenair Level 1 (Mod 429B)	Glenair Level 2 (Mod 429)
Visual Inspection	100%	100%	100% (10X)	100%
Mechanical	2 pcs.	2 pcs.	100%	2 pcs.
Voltage (DWV)	100%	2 pcs.	100%	100%
Insulation Resistance	2 pcs.	2 pcs.	100%	100%
Low Level Contact Resistance	2 pcs.	2 pcs.	100% (Read and Record)	2 pcs. (Read and Record)
Contact Separation Force (pins only)	N/A	N/A	100%	N/A
Mating Force	2 pcs.	N/A	2 pcs.	N/A
Contact/Wire Retention	N/A	N/A	2 pcs.	N/A
Solderability/Resistance to Soldering Heat	2 pcs.	N/A	2 pcs.	N/A

Notes:

1. NASA screening requirements from Table 2C of EEE-INST-002.

3 Magnetic permeability: Are nonmagnetic connectors required?

Spacecraft designers generally avoid the use of ferromagnetic materials, which can become magnetized and can interfere with sensitive instruments. Micro-D connectors do not contain ferromagnetic materials, so magnetic permeability is not a concern. MIL-DTL-83513 requires a maximum permeability of 2 mu. Glenair hermetic Micro-D connectors are made from Kovar® alloy, a highly magnetic material. The stainless steel e-rings commonly used for Micro-D jackscrew attachment also exceed the 2 mu requirement.

4 Cryogenic exposure: Are Micro-D connectors suitable for -200° C. ?

Micro-D connectors are rated to -55° C. Glenair has not performed testing below this temperature. EEE-INST-002 states "...experience has proven it is possible for (non-certified) connector types to be used successfully at cryogenic temperatures. It is recommended that connector samples should be subjected to five cycles of cryogenic temperature...(followed by examination for cracks and DWV)".

5 Materials: Micro-D connectors offer a variety of materials and plating finishes. Which ones are recommended for space flight?

NASA recommends electroless nickel plated connector shells and crosslinked high strength ETFE (Tefzel®) wire. Cadmium plating is prohibited because it sublimates in a vacuum environment. Gold plating is acceptable but rarely used on Micro-D connector shells.

6 Wire Corrosion: M22759/33 irradiated Tefzel® wire is preferred for space applications. What about corrosion problems caused by this wire?

Does M22759/33 wire have an outgassing problem?

Irradiated Tefzel® wire is known to cause tarnishing and corrosion of metal parts in close proximity, usually in sealed bags. Both MIL-DTL-83513 and NASA EEE-INST-002 contain cautionary notes regarding this problem. Wire manufacturers have not been able to eliminate this problem, which might be caused by the insulation extrusion process. This corrosion problem is referred to as "wire outgassing", which has led to confusion over the term outgassing. This problem has nothing to do with the ability of the wire to meet the TML and CVCM outgassing requirements of ASTM E595. M22759/33 irradiated Tefzel wire continues to be the wire of choice for spacecraft. This wire complies with outgassing requirements.

The corrosion problem

Micro-D connectors supplied as pre-wired assemblies should not be stored in sealed bags for extended periods. NASA recommends that parts be inspected for shell discoloration ("a dull "gun metal" appearance) and contact corrosion ("a flat black appearance"). Connectors with corroded contacts should be scrapped.

New Unit Pack Minimizes Corrosion

Glenair has adopted a new packaging standard to protect the connector from tarnishing or corrosion. Figure 2 shows Glenair's standard packaging for metal shell connectors supplied with M22759/33 wire. The connector is wrapped in Teflon® tape and placed in a ventilated sulpher-free paper envelope.

Figure 2
Teflon-wrapped Connector and Perforated Bag

H

"Users are advised that some ETFE insulations are known to outgas trace amounts of corrosive flourine over time. When this wire is used with nickel coated metal shell connectors and stored in sealed plastic or ESD bags, trapped flourine can attack exposed metal shells and contacts."

Excerpt from Note 9, Table 2,
NASA EEE-INST-002

The Space Shuttle Orbiter escapes earth at the speed of 17,000 miles per hour.

But a damaged connector can scratch the mission in the blink of an eye.

Glenair's Sav-Con® Connector Savers are designed to mate with circular and rectangular Mil Spec connectors and test cables which are subject to repetitive mating cycles during manufacture and test. One of the most dramatic applications of our Sav-Con® connectors is on the Space Shuttle Orbiter where they provide protection for the umbilical connectors from lift-off to touch-down on every mission.

Glenair's Sav-Cons® are available in general duty, environmental and high-performance versions, and provide outstanding reliability and protection with only minimal affect on circuit resistance. Visit

PRODUCT SELECTION GUIDE

Glenair's Complete Micro-D Product Line includes all M83513 Micro-D connectors. Choose ***Solder Cup, Pre-Wired or PCB*** versions. Glenair M83513 connectors always use ***TwistPin Contacts*** for high performance, made in U.S.A.

M83513/01, /02, /06, /07
Solder Cup Metal or Plastic Shell

These connectors feature gold-plated solder cup contacts for termination to #26 AWG or smaller wire.

Metal Shell
M83513/01 & 02
Page J-4

Plastic Shell
M83513/06 & 07
Page J-8

M83513/03, /04, /08, /09
Pre-Wired Pigtails, Metal or Plastic Shell

These crimped, epoxy-potted assemblies are available with insulated 19 strand #26 AWG wire or with #25 AWG uninsulated single strand wire. Insulated wire options include wire type, color code and length. Uninsulated wires are gold-plated or SnPb 63/37 solder dipped.

Metal Shell

DETAIL SPECIFICATION

CONNECTORS, ELECTRICAL, RECTANGULAR,
MICROMINIATURE, POLARIZED SHELL,
GENERAL SPECIFICATION FOR

This specification is approved for use by all Departments
and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers polarized shell, microminiature, rectangular connectors.

1.2 Classification.

1.2.1 Class

P - All plastic (shell and insulator)
M - Metal shell (plastic insulator)

1.2.2 Type

I - Crimp contacts (nonremovable)
II - S older contacts (nonremovable)

2. APPLICABLE DOCUMENTS

2.1 General. The documents listed in this section are specified in sections 3 and 4 of this standard. This section does not include documents cited in other sections of this standard or recommended for additional information or as examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements documents cited in sections 3 and 4 of this standard, whether or not they are listed.

2.2 Government documents.

2.2.1 Specifications, standards, and handbooks. The following specifications, standards, and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those listed in the issue of the Department of Defense Index of Specifications and Standards (DODISS) and supplement thereto, cited in the solicitation (see 6.2).

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Defense Supply Center Columbus, ATTN: DSCC-VAI, 3990 East Broad Street, Columbus, OH 43216-5000 by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A
DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

What is the difference between a Glenair COTS Micro-D and a Glenair Mil Spec Micro-D? Which is less expensive?

All Glenair Micro-D's, whether mil spec or COTS, are built with the same components and meet identical requirements. A COTS Micro-D is not a lower cost version of a mil spec part. COTS versions offer more options than the mil spec versions.

Which is more readily available: Mil Spec or COTS?

All M83513 aluminum shell connectors are in stock. All standard COTS versions are also stocked.

What is the difference between a Glenair Mil Spec connector and another brand?

MIL-DTL-83513 allows the use of low-cost stamped contacts; however, the Glenair Micro-D connector features the high performanceTwistPin contact system. Glenair M83513 connectors are 100% Made in USA. Glenair's industry-leading Micro-D capacity and capabilities offer quick worldwide access to the full range of QPL items.

About The Mil Spec

The United States Department of Defense, Defense Logistics Agency, Defense Supply Center, Columbus, Ohio (DSCC, pronounced "Dessy"), maintains a vast library of military specifications covering all kinds of components used in defense equipment. These mil specs simplify system design and procurement, because mil spec parts do not require costly testing for suitability. Easy multiple sourcing is another key advantage of a mil spec part. MIL-DTL-83513 is a detail spec controlling dimensions, materials, performance and testing. This spec covers plastic and metal shell Micro-D connectors.

The QPL At-A-Glance

Manufacturers are required to perform a series of mechanical, electrical and environmental tests in order to be eligible for listing as an approved supplier. When DSCC approval is granted, the manufacturer is added to the Qualified Products List (QPL). Glenair is QPL approved for all M83513 variations.

The "Slash Sheets" At-A-Glance

In addition to the general specification, MIL-DTL-83513 contains a total of 33 Detail Specification Sheets, nicknamed "slash sheets" because a forward slash is used in the numbering system.

How to get a copy of the spec

DSCC specs are available for download. The documents include:
MIL-DTL-83513 Detail Specification (the general spec)
MIL-DTL-83513 Slash Sheets (33 individual specs)
These specs can be found at:
http://www.dscc.dla.mil/Programs/MilSpec/DocSearch.asp
The QPL can be found at:
http://www.dscc.dla.mil/programs/qmlqpl/default.asp

Glenair CAGE Codes

A **CAGE** (**C**ommercial **A**nd **G**overnment **E**ntity) Code is a five position code that identifies companies doing or wishing to do business with the Federal Government. Glenair uses two CAGE codes to identify M83513 products:
06324, Glenair, Glendale , California
0CA77, Glenair Microway Division, Lincolnwood Illinois.

MIL-DTL-83513/03 & /04 Micro-D Connectors
Metal Shell Crimp, Pre-Wired

Micro-D Pre-Wired Pigtails — These connectors feature gold-plated TwistPin contacts and mil spec crimp termination. Specify aluminum shells for best availability. 100% tested and backpotted, ready for use.

Choose the Wire Type To Fit Your Application — For lightest weight and smallest diameter, select M22759/33 space grade insulated wire.

HOW TO ORDER METAL SHELL PRE-WIRED CRIMP MIL-DTL-83513 MICRO-D CONNECTORS

Base Part Number	Slash Number	Shell Size	Wire Type	Shell Finish
M83513	/03 Pin Connector (Plug) /04 Socket Connector (Receptacle)	A B C D E F G H Codes A - H specify the shell size. The number of contacts is shown below for reference. A – 9 B – 15 C – 21 D – 25 E – 31 F – 37 G – 51 H – 100	**M22759/11-26 Teflon®-Insulated Hookup Wire** 01 – 18 Inches (457mm), White 02 – 36 Inches (914mm), White 03 – 18 Inches (457mm), 10 Color Repeating 04 – 36 Inches (914mm), 10 Color Repeating 13 – 72 Inches (1829mm), White 14 – 72 Inches (1829mm), 10 Color Repeating **M22759/33-26 Irradiated Tefzel® Insulated Hookup Wire** 09 – 18 Inches (457mm), White 10 – 36 Inches (914mm), White 11 – 18 Inches (457mm), 10 Color Repeating 12 – 36 Inches (914mm), 10 Color Repeating 15 – 72 Inches (1829mm), White 16 – 72 Inches (1829mm), 10 Color Repeating **Single Strand Uninsulated Wire** 05 – .500 Inch (12.7mm), Gold Plated 06 – 1.000 Inch (25.4mm), Gold Plated 07 – .500 Inch (12.7mm), Tin-Lead Plated(2) 08 – 1.000 Inch (25.4mm), Tin-Lead Plated(2)	C – Cadmium N – Electroless Nickel P – Passivated SST
Sample Part Number				
M83513	/04	— B	09	N

APPLICATION NOTES

1. Shell Material & Finish:	Cadmium plating offers better corrosion resistance compared to nickel, but cad is not acceptable for space or RoHS applications. Electroless nickel plated aluminum is recommended for new design activity. Or, choose stainless steel shells for corrosive environments.
2. Tin-Plated Wire:	The next revision of the mil spec is expected to prohibit the use of pure tin. Glenair M83513 connectors do not contain any components exceeding 97% tin.
3. M22759/33 Corrosion:	The M83513 spec contains a cautionary note regarding M22759/33 wire. The wire insulation is known to cause corrosion to metal parts when stored in a sealed environment. This corrosion has been observed on M83513 connectors. Glenair has implemented a packaging procedure to minimize or eliminate this problem. Connectors are individually wrapped with teflon tape, and the unit pack is a perforated paper envelope. M22759/33 continues to be the preferred wire for space applications.

MIL-DTL-83513/10 Thru /15 Micro-D Connectors
Right Angle PCB Connectors (CBR)

High Performance — These connectors feature gold-plated TwistPin contacts for best performance. PC tails are .020 inch diameter. Specify nickel-plated shells or cadmium plated shells for best availability.

Solder-Dipped — Terminals are coated with SN63/Pb37 tin-lead solder for best solderability.

MIL-DTL-83513/28 Thru /33 Micro-D Connectors
Straight PCB Connectors (CBS)

Space-Saving — These connectors take up less room on the PC board. PC tail spacing is .075 inch (1.9mm), compared to .100 inch (2.54mm.).

Threaded Inserts — Stainless steel inserts are insert molded into plastic trays. These inserts provide a ground path from the PC board to the mating cable.

Solder-Dipped — Terminals are coated with SN63/Pb37 tin-lead solder for best solderability.

PRODUCT SELECTION GUIDE

MWD Series Plastic Micro-D With Solder Cups

These connectors are available with nine through 51 contacts. Featuring the same TwistPin contact system as the MWDM metal shell connector, the MWD is smaller and more economical. MWD connectors do not have interfacial seals.

MWD Solder Cup
Page K-2

MWD Series Plastic Micro-D With Insulated Wire

These crimp-terminated pre-wired assemblies offer an alternative to the time-consuming job of soldering wires. Connectors are available with general purpose Teflon® wire or with aerospace rated Tefzel® wire. MWD series connectors are not compatible with MWDM metal shell connectors.

MWD Pigtails
Page k-4

MWD Series Plastic Micro-D With Uninsulated Wire

Plastic Micro-D's with single strand copper wire can be used for attachment to flexible circuits or for installation on printed circuit boards. Terminals are gold plated or SnPb 63/37 solder-dipped.

MWD Series Micro-D Plastic Shell Solder Cup

MWD Plastic – These connectors feature gold plated TwistPin contacts and mil spec crimp termination. High temperature liquid crystal polymer (LCP) housings are 30% glass-filled.

Solder Cup Contacts – Choose standard size contacts for #26 gage, or select oversize contacts for #24 AWG solid or stranded wire.

MWD Low-Profile Plastic Micro-D's do not have an interfacial seal, and are smaller and lighter weight than metal shell versions.

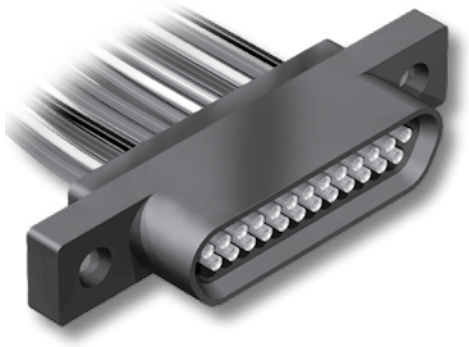
Micro-D Plastic Shell
Pre-Wired Pigtails, Insulated Wire



Micro-D Pre-Wired Pigtails – These connectors feature gold plated TwistPin contacts and mil spec crimp termination. High temperature liquid crystal polymer (LCP) housings are 30% glass-filled.

Choose the Wire Type and Size To Fit Your Application – If on-hand availability is most important, choose #26 AWG Type K mil spec Teflon® wire.

MWD Low-Profile Plastic Micro-D's are non-environmental and are smaller and lighter weight than metal shell versions.

Micro-D Plastic Shell
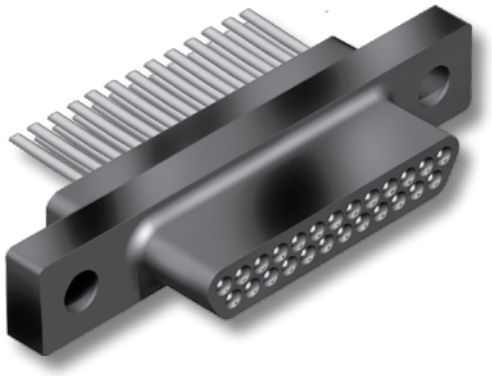
Uninsulated Wire Pigtails



Solder-Dipped or Gold Plated Wire – These connectors feature TwistPin contacts and mil spec crimp termination to solid copper wire. High temperature liquid crystal polymer (LCP) housings are 30% glass-filled.

Choose Gold Plated or Solder Dipped Wire in #24 AWG (.020 inch diameter), #25 AWG (.018 inch diameter) or #26 AWG (.016 inch diameter.

MWD Plastic Micro-D's are non-environmental and are smaller and lighter weight than metal shell versions.

It's Cold, It's Wet, It's Out in the Middle of Nowhere

The Perfect Place for Glenair Composite Junction Boxes and Accessories

For many applications, junction boxes and accessories made from aluminum or stainless steel are satisfactory. But for situations where additional weight savings and corrosion resistance are required, most design engineers are now specifying composite thermoplastic materials. And as you'll see throughout the next section of this catalog, Glenair has built a comprehensive composite box solution. So whether your housing a fiber optic interconnection in a jet fighter or a communication system on an aircraft carrier you can count on Glenair for the best box designs the industry has to offer—in EMI/RFI hardened composite thermoplastic.

Conductive & nonconductive conduit fittings

Lightweight cable junction boxes

Ruggedized multichannel fiber optic connectors

A full selection of cable strtain relief configurations

Fiber optic connector backshells with strain relief

Hybrid fiber optic/electric connectors and accessories

PRODUCT SELECTION GUIDE

500-010 EMI Backshells With Circular Cable Entry

Always in stock, these one piece aluminum backshells are our most popular Micro-D backshells. Terminate cable shields with BAND-IT® stainless steel straps. Finish the cable with heat-shrink tubing or boots, sold separately. Stocked in top, side and 45° entries. Accepts standard and micro shield bands.

Elliptical Entry EMI Micro-D Backshells for Larger Wire Bundles

If your wire bundle exceeds the diameter of the circular entry backshells, then the answer is an elliptical entry backshell. See the table on page L-5 for more information on wire bundle sizes. Choose one piece or split elliptical shells.

(1) Extended jackscrew will not work with 45° cable entry or with dual 45 °entry backshells.
(2) Sizes 9 thru 69 use e-rings or c-clips for connector attachment, 100 pin uses c-clip only.
(3) The cable entry is on the long side of shell. See ordering information for clarification.

ABOUT MICRO-D BACKSHELLS

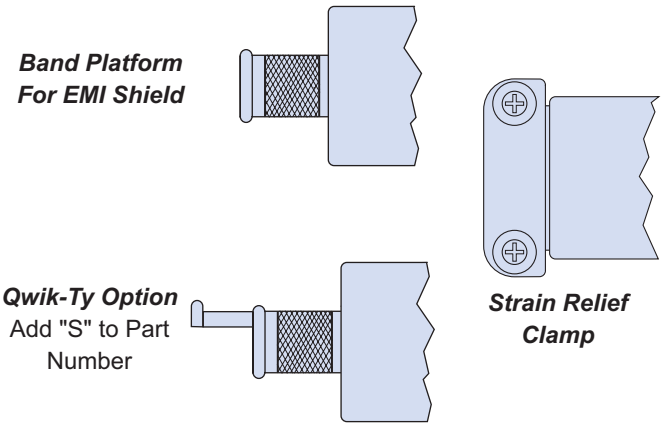
Micro-D EMI backshells connect cable shields to Micro-D connectors, providing strain relief and mechanical protection. These backshells are made out of aluminum alloy. Electroless nickel is the most widely used finish. These backshells are compatible with industry- standard metal shell M83513 type connectors. The following application notes explain how to select the right type of backshell.

EMI Versus Non-EMI Backshells

Select EMI backshells if your cable has a braided copper shield. The cable shield is secured to the backshell with a ***BAND-IT***® strap, supplied with the backshell or purchased separately.

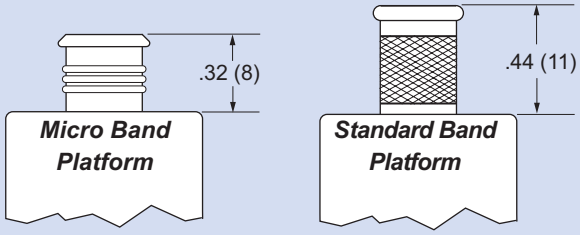
Select a strain relief backshell if your connector has individual wires or if your wire bundle does not have a metal shield.

EMI backshells do not normally require additional strain relief. Micro-D wires are typically potted, and the shield braid is a sufficient strain relief. An optional ty-wrap leg is available if necessary. Add "S" to the end of the part number.



Standard Band Versus Micro Band

Most Micro-D EMI backshells feature low profile band platforms designed for narrow (.125" width) micro band. Some have a taller band platform which also accepts standard bands (.250" width). Please refer to the "Backshell Selection Guide" on the preceding page to identify which backshells are compatible with both the standard band and the micro band.



One Piece Backshell Versus Split Backshell

Use one piece backshells if in stock availability is important. Split backshells allow installation after the other end of the cable has been terminated. Some split backshells fit over the connector, eliminating the highly magnetic clip. Split versions also can accommodate screw locks.

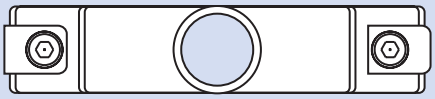
Jackscrews and Screwlocks

Jackscrews are fixed in position and must be turned in order to mate the connectors together. Screwlocks float and allow the connectors to be coupled before the screwlocks are engaged. Screwlocks allow faster mating, while jackscrews offer less risk of contact damage.

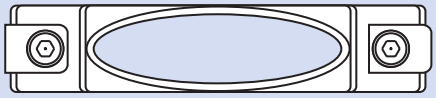
Elliptical Versus Circular Cable Entry

Choose elliptical backshells if the wire bundle diameter is too big to fit in a circular cable entry. Large Micro-D connectors (51 pins and up) usually exceed the limits of the round entries. Refer to the cable entry and wire bundle tables in this section to find out if an elliptical entry is necessary.

The actual size illustrations to the right show the difference between round and elliptical cable entries. The round entry circular mil area = $\pi(\frac{1}{2}D)^2$ = .11 In.^{2}. The formula for the area of an ellipse is π(Length)(Width) ÷ 4 = .36 In.^{2}



Round Cable Entry
100 Pin .375 Inch (9.5 mm.) Diameter



Elliptical Cable Entry
100 Pin .360 By 1.29 Inch (9.1 X 32.8 mm.)

L

BAND-IT® SHIELD TERMINATION SYSTEM

Fast, Cost-Effective Shield Termination

Attach cable braid shields to EMI backshells with ***BAND-IT***® stainless steel straps. The ***BAND-IT***® system offers fast termination and the flexibility to handle different diameters with the same band.

The aerospace industry has adopted this system for every type of application where reliability and durability are essential.

IMPORTANT NOTE: ALWAYS DOUBLE-WRAP BANDS!

Contact Glenair or visit our website (glenair.com) to view our complete line of ***BAND-IT***® products, including pneumatic tools for high production and calibration kits.

Micro Band Tool

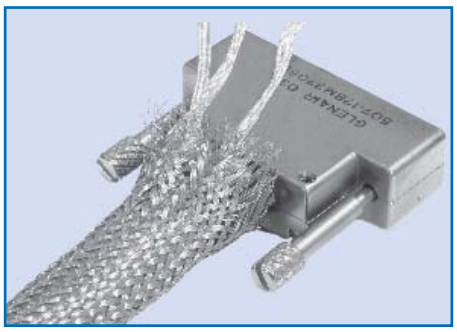
Part Number **600-061**
1.18 lbs.
6.75 Inches (172mm.) Length

Standard Length Micro Band

8.125 Inches (206 mm.)
Part Number **600-057**
600-057-1 Pre-Coiled
Up to .88 Inches (22 mm.) Diameter

Extended Length Micro Band

14.25 Inches (362 mm.)
Part Number **600-083**
600-083-1 Pre-Coiled
Up to 1.88 Inches (47 mm) Diameter



Step One
Cable Prep

Lay individual shields over the band platform. Pull overall braid shield over the band platform so that all braid strands will be captured by the band.

Step Two
Install Band

Wrap the band through the buckle twice. Insert the free end into the banding tool in the direction shown on the tool. Squeeze the short grey handle to insert the band. Slide the band onto the cable. Close the black handle repeatedly until the handle no longer opens. Close the long grey handle until the tool cuts the band. Remove the excess strap from the tool by closing the small grey handle.

Step Three
Trim Braid

It's a snap! Just trim the excess braid and you're done.

ROUND CABLE ENTRY DIAMETER AND WIRE BUNDLE SIZE

Micro-D backshells have a cable entry code in the part number. This code determines the inside diameter of the wire opening.

CABLE ENTRY CODES

Code	Inside Diameter
04	.125
05	.156
06	.188
07	.219
08	.250
09	.281
10	.312
11	.344
12	.375

Round Cable Entry Backshells May Not Be Large Enough to Accomodate Standard Micro-D Wire Bundles

Backshells with round cable entry might not have enough room for the connector wires. Refer to the table below to find out if the wire bundle exceeds the available backshell cable entry size. These are general guidelines. Twisted wires, tubing or other factors can increase the bundle diameter.
Elliptical backshells are recommended for large bundles.

Round Cable Entry

Elliptical Cable Entry
Area = π(Length)(Width)÷4

STANDARD MICRO-D WIRE BUNDLE DIAMETERS

	M22759/11 Wire Bundle Diameter						M22759/33 Wire Bundle Diameter

L

Micro-D Backshells
EMI, Round Cable Entry, With Shield Sock, One Piece 500-011

Shield Sock Backshells save assembly time. These backshells are terminated to tinned copper braid in whatever length you require.

Available in Top, 45° and Side Entry, these backshells feature one piece construction and are available in a variety of plating finishes.

Precision Swaged Braid Termination adds mechanical strength and lowers resistance compared to hex crimps.

Micro-D Backshells
EMI, Banding, Elliptical, Split, 507-178

Split Backshell With Elliptical Cable Entry provides added room for larger wire bundles. Terminate cable shields with ***BAND-IT®*** microbands.

Choose Screwlocks or Jackscrews 507-178 backshells offer two ways to attach mating connectors. **Jackscrews** must be tightened in order to mate the connectors. **Screwlocks** allow the connectors to be mated prior to engaging the screws.

Rugged Aluminum housing with stainless steel hardware, available in standard nickel plating, or choose optional finishes.

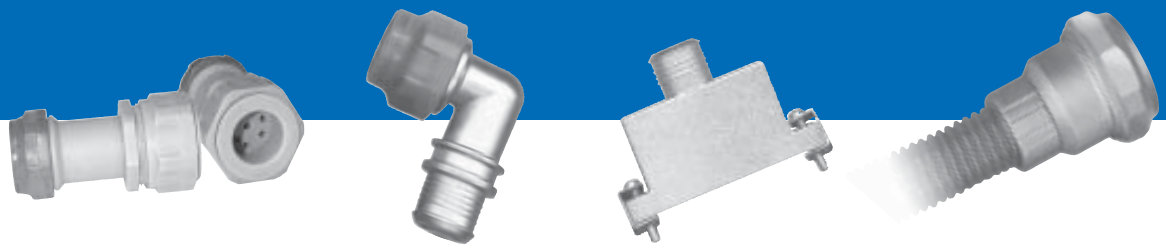
Ten Reasons to Keep Glenair at the Top of Your List of Backshell Suppliers



1. ***We offer the lowest total cost of ownership in the interconnect industry:*** From our cost-saving "no minimum order" policy to our free product samples and application engineering, Glenair provides the best value in connector accessories available today.

2. ***Our full spectrum product lines make for one-stop-shopping:*** We have the most complete selection of rectangular backshells and accessories in the world, including every Mil-Spec slash number and more composite designs than the rest of the industry combined.

3. ***We have the largest capacity, broadest capability factory in the business*** and the knowledge and expertise to handle any production requirement no matter how large or complex.

4. ***We've provided complete convenience in ordering since 1956*** (that's your convenience not ours): choose factory direct, your local Glenair office or your favorite distributor.

5. ***We care as much about quality as you do:*** We're BSENISO9001 registered in Europe and MIL-I-45208A and Boeing AQS D1-9000 Certified in North America.

6. ***We have over 30,000 accessory part numbers ready for immediate shipment*** including every Mil-C-85049 accessory and thousands of Glenair's most popular rectangular and circular backshell part numbers.

7. ***Our turnaround on quotes and custom orders is the fastest in the industry:*** We offer 24 hour turnaround on RFQ's and just 2 to 3 weeks delivery on custom orders, including Micro-Ds and other rectangular interconnects.

8. ***We have the largest and most experienced support staff in the business,*** including sales and engineering in every major aerospace market, on-site application engineering and dedicated product managers for every interconnect discipline.

9. ***We understand interconnect systems from the ground up:*** We're the only connector, backshell and accessory supplier to operate a full service harness facility. We even make our own line of assembly tools.

10. ***We're committed:*** Backshells and connector accessories are our life. We've served this market since 1956 and we're committed to meeting the evolving needs of our customers.

Glenair: A world of Interconnect Solutions

PRODUCT SELECTION GUIDE

Micro-D Uni-Saver
Always in stock,these feed-thru pin-socket adapters feature an innovative design using a single machined aluminum housing. Fully EMI protected, Uni-Savers protect expensive equipment from damage during testing and burn-in. Available in all sizes.

Uni-Saver
Page M-2

Micro-D Plastic Dust Caps
Always in stock,these anti-static black LDPE dust caps protect Micro-D connectors from debris and damage. All Glenair Micro-D connectors are furnished with these dust caps; however, these caps may be purchased separately for replacements.

Page M-4

Micro-D Metal Protective Covers
These aluminum covers provide complete mechanical and environmental protection. A silicone gasket assures water-tight sealing. A variety of attachment styles are available.

Metal Covers
Page M-5

Bean Rubber Covers
For protection of Micro-D's used in tactical equipment, these synthetic rubber covers are friction-fit and attach with nylon cord and ring terminals.

Rubber Covers
Page M-7

Shorting Adapters
Combining a switching backshell and a Micro-D connector, these assemblies have all contacts shorted to each other. These shorting plugs provide ESD protection to sensitive instrumentation.

Shorting Adapters
Page M-3

Jackscrew Kits
These stainless steel kits are compatible with standard Micro-D connectors and meet the requirements of MIL-DTL-83513. Jackscrews are available with slot heads or hex heads. Choose low profile or extended length versions.

Jackscrew Kits
Page M-8

Jackpost Kits
Jackposts are available in various lengths to fit front and rear panel mounted connectors. These stainless steel jackposts fit all standard Micro-D connectors.

Jackpost Kits
Page M-10

Interfacial Seals
Replace damaged Micro-D socket connector interfacial seals with new ones. Sometimes these seals can tear or be contaminated. Held in place by an interference fit with the contacts, damaged seals can be removed with tweezers.

Interfacial Seals

Micro-D Sav-Con® Connector Savers
Uni-Saver

Compact Size reduces stress on mating connectors.

In Stock, No Waiting – All standard Uni-Saver sizes are in stock (9, 15, 21, 25, 31, 37, 51 and 100 pin).

EMI Protected one piece shell.

MATERIALS & FINISHES	
Shell	Aluminum Alloy 6061 -T6 Electroless Nickel Plated
Contacts	Gold-Plated Copper Alloy
Encapsulant	Epoxy
Insulators	Glass-Filled LCP
Hardware	300 Series Stainless Steel, Passivated

Protect Expensive Equipment With Glenair's Micro-D Uni-Saver

These connector savers feature a one-piece aluminum housing, TwistPin contacts and locking hardware. Typical applications include test equipment and space-grade instruments. The Uni-Saver prevents wear and tear on sensitive gear. Standard Uni-Savers are electroless nickel plated. Other plating finishes are available on request.

C CLIP JACKSCREW KITS

C Clip Jackscrew Kits offer an alternative to e-ring jackscrew kits. The c clip fits over the flange and, unlike e-rings, cannot be dislodged in handling or use.

Order Two Kits Per Connector. Each kit consists of one jackscrew and one c clip.

Corrosion-Resistant Steel – The clip is made from 17-7PH spring temper stainless steel. The jackscrew is made from 125 KPSI tensile strength stainless steel, passivated.

Application Note: The magnetic permeability of the c clip exceeds the 2.0 µ maximum of MIL-DTL-83513.

REPLACEMENT HARDWARE KITS FOR C CLIP MICRO-D BACKSHELLS

Replacement Hardware Kits for Standard Series 50 Micro-D Backshells.
Order Two Kits Per Connector.
Each Jackscrew kit consists of one jackscrew and one c clip.

Corrosion-Resistant Steel – The clip is made from 17-7PH spring temper stainless steel. The jackscrew is made from 300 series stainless steel, passivated.

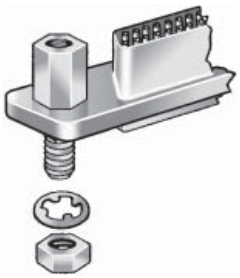
Micro-D Accessories
Jackpost Kits

Rear Panel Mount Micro-D Jackpost



Micro-D Jackpost Kits feature 300 series stainless steel. Select a style: standard hex posts, rear panel, or rear panel printed circuit board.

Order One Kit Per Connector. Each kit contains two jackposts.

JACKPOST GENERAL INFORMATION

1. Material and Finish:	Corrosion resistant steel in accordance with ASTM A484 and ASTM A582, passivated in accordance with ASTM A967.
2. Torque:	#2-56 threads= 2.5 inch-pounds, #4-40 threads = 4.0 inch-pounds. Maximum recommended torque for installation and operation.
3. Standard Package:	One kit consists of two jackposts, 2 washers and 2 nuts for styles 1 and 2. Style 3 kits contain two jackposts. One kit per bag.
4. Application:	Style 1 and 2 jackposts are compatible with any standard Micro-D connector. Style 3 jackposts for rear panel mounting Glenair printed circuit board connectors types BS, BR, and CBR only.

M

Sometimes It *Is* the Little Things that Count...

...Like an Integral Banding Platform

Glenair Series 80 "Mighty Mouse" connectors save size and weight in interconnect systems. That much we know. But the design of the connector also yeilds additional savings by eliminating the requirement for an accessory backshell for EMI shield termination. That's because every version of our ultra-miniature "Mighty Mouse" connector is available with an integral banding porch for the termination of metal and fabric braided screening. The integration of a shield termination platform right on the connector may seem like a little thing; but it sure does reduce the size and weight of the complete interconnect package—No small matter in a world that's now counting ounces instead of pounds.

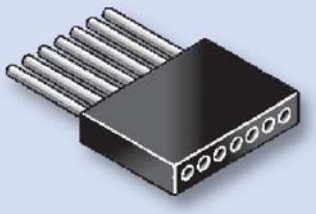
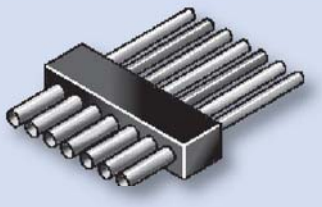
PRODUCT SELECTION GUIDE

MWS Series MicroStrips

MicroStrip connectors are one piece molded plastic insulators housing standard TwistPin contacts on .050 inch (1.27 mm.) spacing. These strips are used in tight spots where a Micro-D will not fit. Although these MicroStrips do not have mounting holes or locking hardware, these features can be incorporated into custom designs.
MicroStrips are available in two to 30 contacts. Optional guide pins provide polarization.

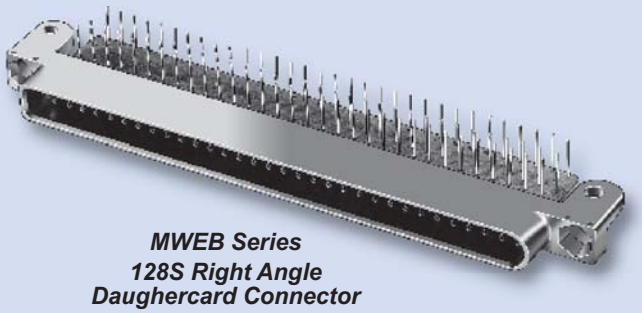


MWS Series Pin Connector



MWS Series Socket Connector

Page N-11



MWEB Series 128S Right Angle Daughercard Connector

MWEB EdgeBoard Connectors

These two row .050 inch (1.27 mm) pitch connectors are designed for motherboard-to-daughtercard applications. Available in four styles: surface mount cardedge for daughtercards, vertical thru-hole for motherboards, right angle thru-hole for daughtercards, and prewired cable connectors, these MWEB connectors feature rugged aluminum shells and TwistPin contacts. The single gang 128 pin and the two gang 184 pin (2 X 92 pin) are a ruggedized alternative to commercial board connectors.

MWKQ Micro Circular Connectors

The MWKQ connector provides quick-disconnect capability combined with a high-performance contact system and rugged construction. Intended for panel-to-cord I/O applications, these connectors are found in tactical military equipment, weapons systems and various instrumentation applications.
Available in two sizes with 7 or 19 contacts, the MWKQ is factory-terminated to the wire of your choice. Shielded, overmolded cordsets and other custom versions are available.

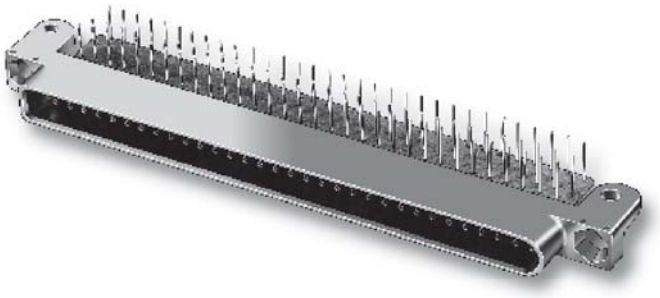
N



Industry-Standard, Approved for Airborne Computers

MWEB EdgeBoard connectors meet the requirements of MIL-DTL-55302/120 thru /123. Available with 128 or 184 contacts.

Rugged Aluminum Shell and TwistPin Contacts

MWEB connectors share the same design and construction as the Glenair Micro-D M83513 connector.

Backplane, Daughtercard and Wired

Vertical mount thru-hole motherboard connectors and straddle mount daughtercard connectors are complemented by right angle thru-hole and pre-wired I/O versions.

Rugged Mil Spec Performance in a High-Density Backplane Connector System: The MWEB EdgeBoard

Featuring a width of only ¼ inch (6.4 mm.), MWEB Series connectors provide high-density in a rugged metal shell connector. Contacts are rated at 3 amps, and the DWV voltage rating is 300 volts AC RMS at 70,000 feet altitude. The two row, .050 inch (1.54 mm.) spacing is made possible by using TwistPin reverse gender contacts. Insert-molded LCP insulators are resistant to heat and chemicals. Contacts are beryllium copper with fifty microinches of gold plating. Shells are machined aluminum alloy. Hexagonal polarizing keys allow up to 36 keying options.

MWEB Series EdgeBoard Connectors
MWEB Pre-Wired and Solder Cup Connectors

MWEB EdgeBoard Connectors For Input/Output Wire-To-Board Applications –

With 128 or 184 contacts, these narrow profile factory-terminated MWEB connectors provide a space-saving I/O wire to board solution. Connector width of .25 inch (6.4 mm.) allows for high-density card slots.

High Performance TwistPin Contacts

Suitable for airborne avionics processors and mission-critical computers, these pre-wired connectors feature interfacial seals and backpotting for improved environmental protection. Or, choose solder cup connectors for integration into wire harnesses.

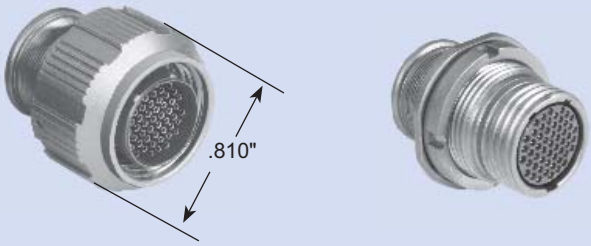
CUSTOM CIRCULAR TWISTPIN CONNECTORS

55 Pin Circular Connector

This connector, developed for a CCD imaging system, provides 55 contacts in a shell size 9 circular connector. Compatible with standard Glenair Series 80 "Mighty Mouse" connector options, this layout offers high density packaging and environmental protection in a circular twistpin connector.



Ultra-Small 7 Pin Micro Circular

This "minimalist" connector grew out of the need for an extremely small connector for use in labratory monitoring equipment. The diameter over the coupling nut is .375 inches (9.53 mm.). Designed for wire-to-wire applications, the coupling nut is captivated by soldering a ferrule to the back of the plug.

N

Four Reasons to Add Glenair to Your Short List of Suppliers:

First and foremost you need availability.

Are the products and components you need either in stock or able to be manufactured in a short period of time? Glenair has built its reputation on fast turnaround. We maintain the world's largest inventory of connector accessories and deliver faster turnaround on quotes and orders than anyone else in our business. Today, Glenair is changing the way the interconnect industry operates: from a long lead-time, custom order problem; to a fast response, in-stock solution. From connector accessories to fiber optic termini, Glenair is the "same-day" leader.

Second, you need capacity.

Can the supplier respond to your evolving requirements with the factory capacity and labor necessary to meet every demand—from one piece to one hundred thousand? Glenair has built the largest capacity, broadest capability factory in the interconnect accessory industry. We have the knowledge, experience and equipment necessary to handle any production requirement, no matter how large or complex, and the manpower to tackle even the most aggressive production schedules.

Third, you need convenience in ordering.

Do your current suppliers insist on quantity or dollar minimums whenever you place an order? Are their products available only from distributors with limited product knowledge and equally limited shelf stock? Is it hard to get samples when and where you need them? Do you get charged expediting fees for accelerated production? If your answer to any of these questions is yes, we encourage you to consider Glenair, where complete convenience in ordering has been a guiding principle since 1956.

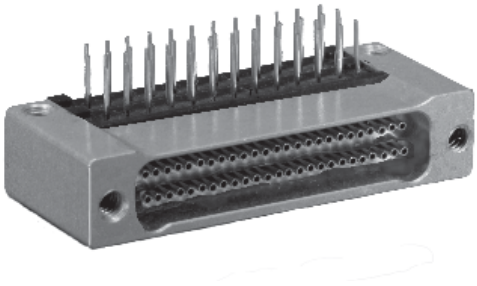
Finally, you need top quality products backed by outstanding technical support.

At Glenair, we've made product quality and worldwide technical support a major part of our approach to earning your trust and loyalty. We've established an unsurpassed sales, support and engineering presence in every major market in the world. And we've designed quality into every product we ship, by applying the experience and expertise gained from over 40 years in the business.

In every respect, our formula for serving the fiber optic interconnect customer is identical to the "best-value" service model we've relied on to maintain our leadership position in our core, connector accessory business:

- ***Same-Day Delivery on Our Most Popular Part Numbers***
- ***Lightning-Fast Turnaround on Quotes for Price and Delivery***
- ***No Price or Quantity Minimums***
- ***Outstanding Application Engineering and Worldwide Technical Support***

Section P
Series 89 Nanominiature Connectors



Glenair's Nano Connectors offer ultra high density for maximum weight and space savings. Contact spacing is .025 inches. These connectors meet the performance and intermateability requirements of MIL-DTL-32139. 1 AMP current rating, 70 VAC RMS operating voltage. #30 and #32 wire sizes, thru-hole and SMT board mount versions.

ABOUT NANOMINIATURE CONNECTORS

Nanominiature Connectors At A Glance

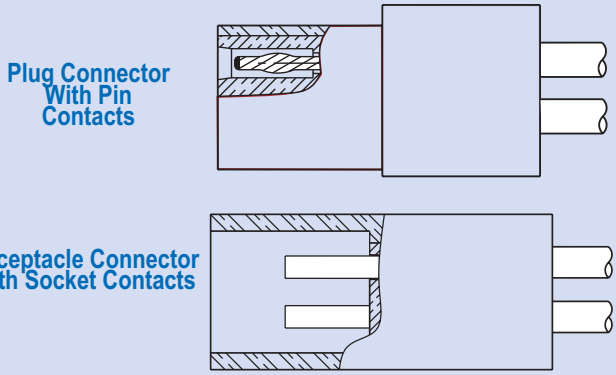
Nanominiature connectors are high reliability ultraminiature interconnects intended for critical applications where size and weight restrictions will not allow the use of Micro-D connectors. Typical applications include miniaturized electronics boxes used in UAV's, satellites, missile systems, and geophysical instruments. Contact spacing of 0.025 inches combined with a rugged contact system allow these nano connectors to be used in demanding environments where size restrictions will not allow the use of any other connector.

The NanoPin Contact System

The Glenair Nano contact system consists of a twistpin and a tubular socket.

The pin contact is a miniaturized version of the Glenair Micro-D twistpin. Spring temper gold alloy wires are welded at the tip to create a hemispherical radius. The pin bundle is bulged to create a spring. The bundle is crimped to a tubular sleeve, allowing wire to be crimped to the contact.

The socket contact is fabricated from drawn gold alloy tubing. The material is spring temper alloy, assuring excellent crimp strength. This contact system accommodates either #30 or #32 AWG wire. The current rating is 1 ampere.



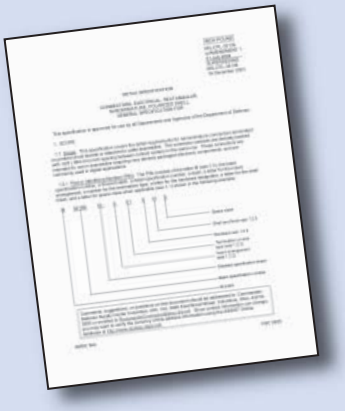
Superior Performance

The NanoPin contact system offers excellent durability and superior resistance to shock and vibration. The pin bundle consists of seven strands of gold alloy wire, providing multiple contact points with the socket. The contacts are unplated. This is possible because the contact material is 70% gold, alloyed with other metals to yield spring temper material.

NanoPin

A New Industry Standard

Glenair Series 89 Nanominiature connectors meet the requirements of MIL-DTL-32139. This Defense Supply Center, Columbus (DSCC) specification simplifies the task of specifying nano connectors. This mil spec guarantees interchangeability and intermateability.



SERIES 89 NANOMINIATURE CONNECTOR PERFORMANCE SUMMARY

Contact Spacing	.025” (0.64) Contact Centers
Wire Accommodation	#30-#32 AWG
Current Rating	1 AMP Maximum
Voltage Rating (DWV)	300 VAC RMS Sea Level, 100 VAC RMS 70,000 Feet
Insulation Resistance	5000 Megohms Minimum
Operating Temperature	-55° C. to +125° C.
Contact Resistance	71 Millivolt Drop Maximum, When Tested With 1 AMP Current, #30 AWG Wire
Vibration	20 g’s, in Accordance with EIA-364-28, Condition IV
Shock	50 g’s, in Accordance with EIA-364-27
Durability	200 Mating Cycles
Corrosion Resistance	48 Hours Salt Spray In Accordance With EIA-364-26, Condition B
Humidity	96 Hours, In Accordance with EIA-364-31 Condition A
Contact Engaging/Separation Force	2 Ounce (0.56 Newtons) Maximum, 0.5 Ounce (0.14) Minimum
Thermal Vacuum Outgassing	Total Mass Loss (TML) 1.0% Max., Volatile Condensible Material (VCM) 0.1% Max.

MATERIALS AND FINISHES

Connector Shell	Aluminum Alloy, Cadmium Plated per SAE-AMS-QQ-P-416 Type II Class 1. Aluminum Alloy, Electroless Nickel Plated Per SAE-AMS-C-26074, Class 3 or 4, Grade B Titanium Alloy per MIL-T-81556, Unplated 300 Series Stainless Steel per ASTM A582
Insulator	Liquid Crystal Polymer (LCP),per MIL-M-24519 GLP-30F, 30% Glass-Filled
Pin Contact	Spring Temper Gold Alloy, Unplated, Per ASTM B477 and ASTM B541.
Socket Contact	Gold Alloy, Unplated, Per ASTM B477 and ASTM B541.
Hardware	300 Series Stainless Steel
PCB Trays	Liquid Crystal Polymer (LCP),per MIL-M-24519 GLP-30F, 30% Glass-Filled
Encapsulant	Epoxy

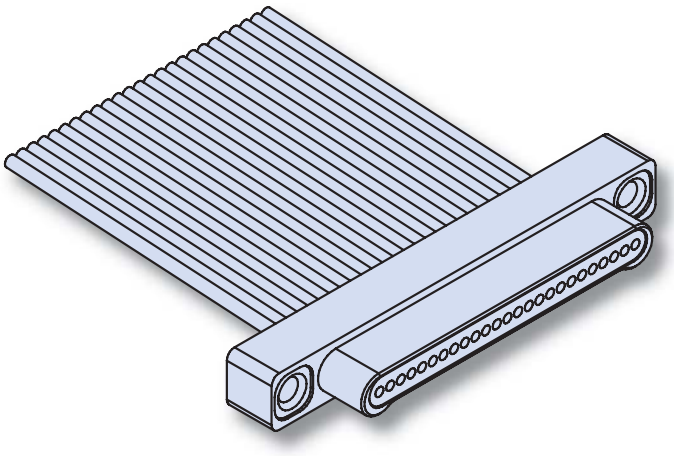
Series 89 Nanominiature Connectors
Single Row Pigtail Assemblies, Insulated Wire
890-001 and -002



Glenair's Pigtail Nano Connectors feature gold alloy NanoPin contacts. Contacts are precision-crimped to insulated, stranded wire. These nanomimiature connectors offer premium preformance and reliability for demanding applications. Contact spacing is .025 inches. 1 amp current rating, DWV rating 300 volts AC. Wire gages #30 and #32 AWG.

NanoPin Contact System assures premium performance in demanding environments. The gold/platinum alloy contacts will stand up to years of exposure without corrosion.

Typical Applications include UAV's, satellites, missile systems and geophysical instruments.

Series 89 Nanominiature Connectors
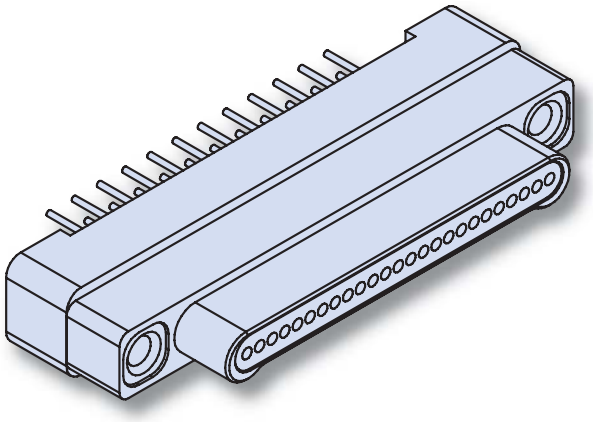
Single Row Vertical Mount Printed Circuit Board
890-006 and -007



Vertical Mount PCB Nano Connectors feature gold alloy NanoPin contacts. These nanomimiature connectors offer premium performance and reliability for demanding applications. Available with #0-80 threaded inserts, or with jackscrews for use with flexible circuits.

Pre-Tinned PC Tails are coated with Sn63Pb37 tin-lead for excellent solderability.

Choose Aluminum, Titanium or Stainless Steel Shells in seven layouts from 9 to 51 contacts. Complies to the requirements of MIL-DTL-32139. These connectors are intermateable with any corresponding Glenair Series 890 single row metal shell nanominiature connector.

Series 89 Nanominiature Connectors
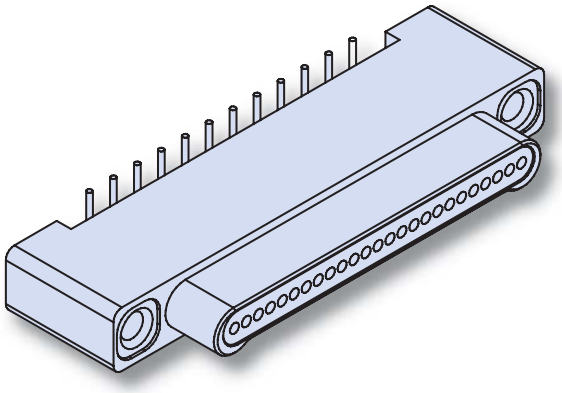
Single Row Vertical Surface Mount PCB
890-010 and -011



Vertical SMT PCB Nano Connectors feature gold alloy NanoPin contacts. These nanomimiature connectors offer premium performance and reliability for demanding applications. Available with #0-80 threaded inserts, or with jackscrews for use with flexible circuits.

Pre-Tinned PC Tails are coated with Sn63Pb37 tin-lead for excellent solderability.

Choose Aluminum, Titanium or Stainless Steel Shells in seven layouts from 9 to 51 contacts. Complies to the requirements of MIL-DTL-32139. These connectors are intermateable with any corresponding Glenair Series 890 single row metal shell nanominiature connector.

Series 89 Nanominiature Connectors
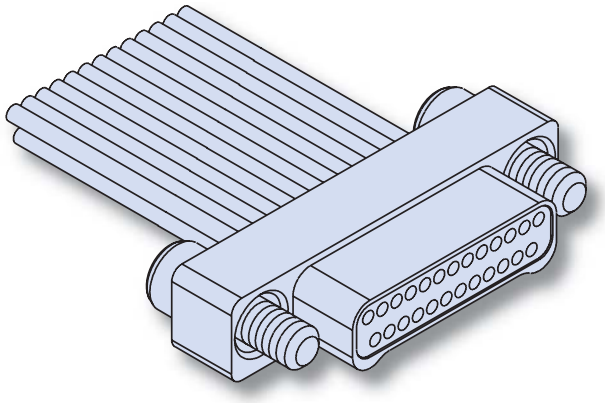
Two Row Pigtail Assemblies, Insulated Wire
891-001 and -002



Glenair's Pigtail Nano Connectors feature gold alloy NanoPin contacts. Contacts are precision-crimped to insulated, stranded wire. These nanomimiature connectors offer premium preformance and reliability for demanding applications. Contact spacing is .025 inches. 1 amp current rating, DWV rating 300 volts AC. Wire gages #30 and #32 AWG.

NanoPin Contact System assures premium performance in demanding environments. The gold/platinum alloy contacts will stand up to years of exposure without corrosion.

Typical Applications include UAV's, satellites, missile systems and geophysical instruments.

Series 89 Nanominiature Connectors
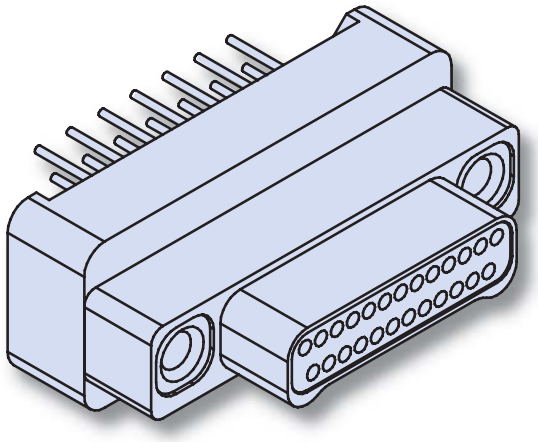
Two Row Thru Hole Vertical Mount Printed Circuit Board
891-006 and -007



Vertical Mount PCB Nano Connectors feature gold alloy NanoPin contacts. These nanomimiature connectors offer premium performance and reliability for demanding applications. Available with #0-80 threaded inserts, or with jackscrews for use with flexible circuits.

Pre-Tinned PC Tails are coated with Sn63Pb37 tin-lead for excellent solderability.

Choose Aluminum, Titanium or Stainless Steel Shells in seven layouts from 9 to 51 contacts. Complies to the requirements of MIL-DTL-32139. These connectors are intermateable with any corresponding Glenair Series 891 two row metal shell nanominiature connector.

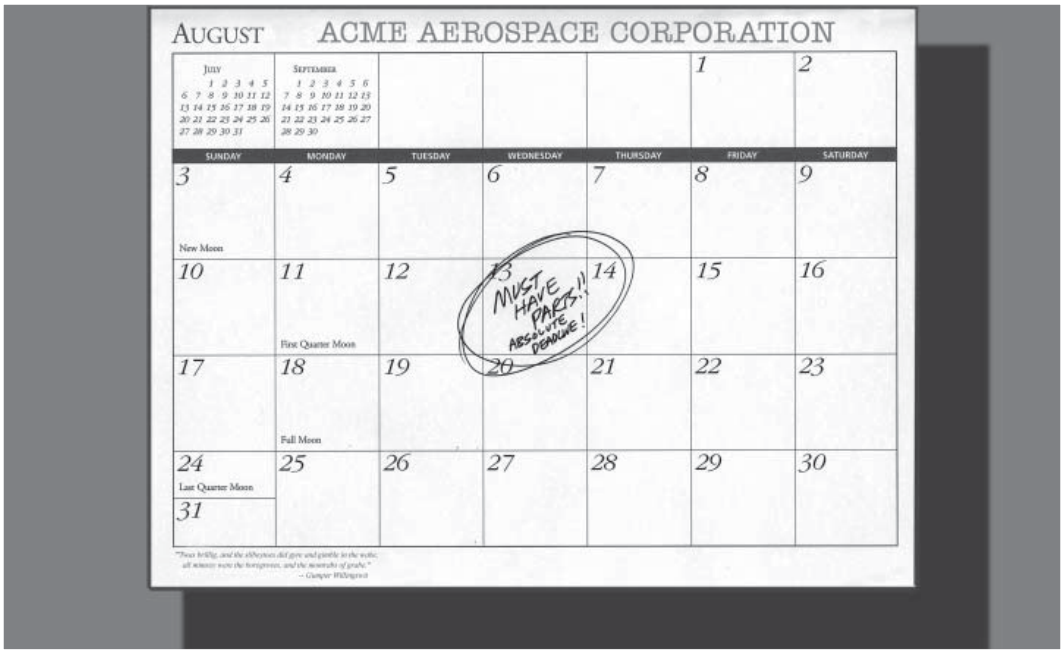
If "on time" is a promise you hope your vendors will keep...



...your best hope is to place your orders with Glenair.

Most interconnect suppliers quote several months or more to make a connector. At Glenair, we not only quote the shortest lead times in our industry—generally 2-3 weeks—we also do the best job by far of getting the work out when we say we will. While it's true we can't promise we'll always make our dates, we're confident we'll be way ahead of whoever's in second place when it comes to on-time delivery. And for those jobs which can't wait even 2-3 weeks, we offer over 50,000 part numbers in stock and ready for same-day shipment.

Commercial and Mil Spec connector accessories

Convoluted tubing and metal-core conduit

Electrical and fiber optic cable assemblies

Composite thermoplastic components

Microminiature connectors and accessories

Backshell assembly and termination tools

TABLE 1: MICRO-D STANDARD MATERIALS AND FINISHES

Connector Shell, Metal	Aluminum Alloy 6061 In Accordance With SAE AMS-QQ-A-250/11 Plating Code 1: Cadmium W/ Yellow Chromate per SAE-AMS-QQ-P-416, Type II, Class 3 Plating Code 2: Electroless Nickel In Accordance With ASTM B733-90 SC2 Type 1 Class 5. Plating Code 4: Black Anodize In Accordance With MIL-A-8625 Type II Class 2 Plating Code 5: Gold Plated In Accordance With ASTM B48 Plating Code 6: Chem Film In Accordance With MIL-C-5541 Class 3 Stainless Steel, 300 Series Plating Code 3: Passivated In Accordance With SAE AMS 2700
Connector Shell, Plastic	Liquid Crystal Polymer, 30% Glass-Filled, In Accordance With MIL-M-24519
Insulator	Liquid Crystal Polymer, 30% Glass-Filled, In Accordance With MIL-M-24519
Interfacial Seal	Flourosilicone Rubber In Accordance With A-A-59588
Terminal Block, PCB	Liquid Crystal Polymer, 30% Glass-Filled, In Accordance With MIL-M-24519
Pin Contact (TwistPin)	Beryllium Copper, Gold Plated In Accordance With ASTM B 488 Type II Class 1.27 (50 Microinches Minimum) Code C, Over Nickel Underplate In Accordance With SAE AMS-QQ-N-290, Class 2, (30-150 Microinches).
Socket Contact	Phos Bronze ASTM 139 Gold Plated In Accordance With ASTM B 488 Type II Class 1.27 (50 Microinches Minimum) Code C, Over Nickel Underplate In Accordance With SAE-AMS-QQ-N-290, Class 2, (30-150 Microinches).
Encapsulant (Potting)	Epoxy Resin, Hysol EE4215/HD3561
Hardware	Stainless Steel, Passivated In Accordance With SAE AMS 2700
Pigtail Wire, Insulated Hookup	Wire Type E: 7 Strand Silver-Coated Copper Wire, Extruded PTFE Insulation, 600 Volts RMS, 200°C., In Accordance with NEMA HP3 (Replaces MIL-W-16878/4) Wire Type K: 19 Strand Silver-Coated Copper Wire, Extruded PTFE Insulation, 600 Volts RMS, 200° C., In Accordance with SAE AS 22759/11 Wire Type J: 19 Strand High-Strength Silver-Coated Copper Alloy Wire, Crosslinked Modified ETFE Insulation, 600 Volts RMS, 200° C., In Accordance with SAE AS 22759/33
Pigtail Wire, Uninsulated	Wire Finish Code 3: Solid Copper Wire In Accordance With A-A-59551, Gold-Plated, Solder Dipped in 63/37 tin-lead Wire Finish Code 4: Solid Copper Wire In Accordance With A-A-59551, Gold-Plated

TABLE 2: MICRO-D PERFORMANCE SPECIFICATIONS

PROPERTY	SPECIFICATION	TEST METHOD
Contact Current Rating	3 Amps continuous from -55° to +150° C.	EIA-364-70
Dielectric Withstanding Voltage	600 VAC sea level, 150 VAC 70,000 feet	EIA-364-20
Insulation Resistance	5000 megohms minimum	EIA-364-21
Contact Resistance	8 milliohms maximum	EIA-364-06
Low Level Contact Resistance	32 milliohms maximum	EIA-364-23
Operating Temperature	-55° to +150° C.	
Salt Spray (Corrosion)	48 hours	EIA-364-26, test Condition B
Mechanical Shock	50 g.	EIA-364-27, Test Condition E
Vibration (Sine)	20 g.	EIA-364-28, Test Condition IV
Magnetic Permeability	2 Mu maximum	EIA-364-54
Durability	500 Cycles	
Outgassing	1.0% Total Mass Loss max., 0.1% Collected Volatile Condensible Materials	ASTM E595
Mating and Unmating Force	10 ounces per contact maximum	EIA-364-13
Crimp Tensile Strength, #26 AWG	5 pounds min. M22759/11, 10 pounds min. M22759/33	EIA-364-08
Humidity, Metal Shell with Interfacial Seal	100 megohms IR following ten 24 hour cycles	EIA-364-31, Method IV.
Fluid Immersion	20 hours synthetic lubricating oil, 1 hour coolanol	MIL-DTL-83513F, para. 4.5.18
Shielding Effectiveness, Metal Shell with Ground Spring	65 dB minimum	EIA-364-66

TABLE 3: STANDARD WIRE SPECIFICATIONS

Wire Code	Specification	Insulation	Conductor	Operating Temp.	Voltage Rating	AWG	Strands	Max. Conductor Diameter (Inches)	DC Resistance Ohms/1000 Ft.	Max. Finished Wire Dia.
E	NEMA HP3-EXB	Extruded PTFE	Silver-coated copper	-65° to +200°C	600 volts RMS	#24	7/32	.025	24.5	.048
						#26	7/34	.020	39.7	.043
						#28	7/36	.016	63.6	.039
						#30	7/38	.013	100	.036
J	M22759/33	Extruded cross-linked modified ETFE	Silver-coated high-strength copper alloy	-65° to +200°C	600 volts RMS	#24	19/36	.025	28.4	.037
						#26	19/38	.020	44.8	.034
						#28	7/36	.016	74.4	.029
						#30	7/38	.012	117.4	.026
K	M22759/11	Extruded PTFE	Silver-coated copper	-65° to +200°C	600 volts RMS	#24	19/36	.025	24.3	.045
						#26	19/38	.020	38.4	.040
						#28	7/36	.015	63.8	.035

TABLE 4: STOCKED WIRE SIZES AND COLORS

Wire Code	Color Code	Wire Insulation Color	#24 AWG	#26 AWG	#28AWG	#30 AWG
E	1	White	✓	✓	✓	✓
	2	Yellow	✓	✓	not available	not available
	5	White with MIL-STD-681 color stripes	✓*	✓*	not available	not available
	7	10 Color Repeat	✓	✓	not available	not available
J	1	White	✓	✓	✓	✓
	2	Yellow	✓	✓	✓	✓
	5	White with MIL-STD-681 color stripes	✓*	✓*	not available	not available
	7	10 Color Repeat	✓	✓	✓	✓
K	1	White	✓	✓	✓	not available
	2	Yellow	✓	✓	✓	not available
	5	White with MIL-STD-681 color stripes	✓*	✓*	not available	not available
	7	10 Color Repeat	✓	✓	✓	not available

✓ = Stocked wire.

✓* = Stocked wire through 51 colors only. Connectors with more than 51 contacts are not available with striped wire. 10 color repeating is the recommended alternate.

A World of Interconnect Solutions

- Fast Turnaround on Quotes and Custom Orders
- 45,000 Part Number Same-Day Inventory
- No “Minimum Order” Policy
- Abundant Manufacturing Capacity
- Full Spectrum Product Lines

Micro-D TwistPin Connectors
Nano Miniature Connectors
Circular Connector Accessories
Composite Connector Accessories
Connector Protectors, Caps and Boots
D-Subminiature and Micro-D Backshells
Fiber Optic Connectors and Assemblies
MIL-DTL-38999 Hermetic Connectors
MIL-C-28840 Circular Connectors
Sub-Miniature Circular Connectors
Sav-Con® Connector Savers
Geo-Marine® Connectors and Cables
Convoluted Tubing and Conduit Fittings
Metal-Core Conduit
Custom-Designed Multi-Conductor Cables
Braided Cable Harnesses
