

TYPE: 122 Powersafe Breakouts

In response to demand and as an alternative to our T-Box splitter units, Phase 3 now offers the 122 Breakout / Splitter solution.

This simple yet effective design allows for **1** cable, **2** split out, to **2** cable tails from the main inlet connector, allowing for sub distribution.

In the example shown the main 800amp Line Drain connector is split down to 2 x Line Source 400amp Powersafe connectors.

The cables are crimp terminated to the inlet connector, with strain relief and water tightness ensured via a Custom, Adhesive lined, Heat shrink moulding.

Any combination of connectors can be easily configured.

Cable tail lengths can be customer defined (standard is 0.5meters).

Further cables can be supplied printed with customer name or other info at no additional charge.
