SUBJECT: CORESHORTS™ PRO 3.0 or 2.0 Medical Recommendation

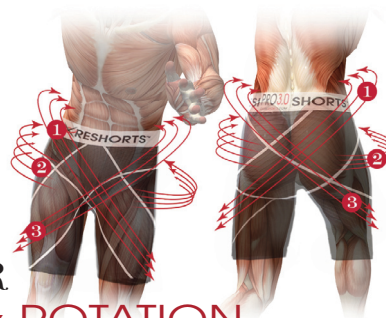

The intent of this letter is to provide a Medical recommendation for CORESHORTS™.

CORESHORTS™ PRO 3.0 & 2.0 are the only products that support the low back, pelvis and hip as a functional unit. They create pelvic compression and motion control during functional movement. Comparatively, they produce circumferential compression for the pelvis like a sacro-iliac belt while also providing stability for movement of the hips.

1 STABILIZES PELVIC RING

2 CONTROLS PELVIS & HIP

3 CREATES TENSION FOR OUTWARD MOTION & ROTATION

INJURIES

Lower Back
 Pelvis & SI Joint
 Hip & Groin

RECOVERY

Strains & Sprains
 Pelvic & SI Stability
 Hip Replacement

PERFORMANCE

Stability
 Motion Control
 Speed & Power

Both CORESHORTS™ PRO 3.0 and 2.0 are classified as a **Soft Orthosis Brace** which provides pelvic stability for low back and pelvic conditions such as, lumbo-sacral dysfunction, sacro-iliac joint laxity, osteitis pubis, hernia repair, hip arthritis (THR) and groin injury recovery.

Both versions are designed to meet medical grade compression ratings.

The **PRO 3.0** has a compression rating of **25 - 30 mmHg for maximal stability** and the **PRO 2.0 is rated 20 - 25 mmHg compression to allow for a wider fit variation**. Both are comparable to an adjustable back brace or sacro-iliac joint belt. They are designed to support injury recovery and facilitate a safe return to work and day to day activities in conjunction with a rehab program.

SPECIFIC REASON CORESHORTS™ PRO 3.0 OR PRO 2.0 IS BEING RECOMMENDED:

Sincerely: _____
