

NTK | THC Test Kit

SwabTek's THC Test Kit is a single-use spot test used to identify the presence of THC in any liquid or solid sample. The test is designed to provide a presumptive indication of Total THC concentration, with particular focus on the 0.3% threshold that designates the difference between Marijuana and Hemp under federal guidelines.

SwabTek's Tests are an alternative to traditional presumptive field tests, combining dry reagent technology with an intuitive form factor to deliver a test that is simpler and safer to use than any on the market.

The tests do not contain any hazardous chemicals or glass components and are 100% recyclable. Thanks to these safety improvements, SwabTek is the first law-enforcement grade presumptive field test available to the general public. They are simple, discreet and non-invasive, making them the perfect tool for police officers, schools, airports, private businesses and parents.
